Messages are presented chronologically by archived date.

Binary or encoded payloads are not printed as blocks of encoded text; a placeholder appears where such material was detected. The original source text is unchanged.

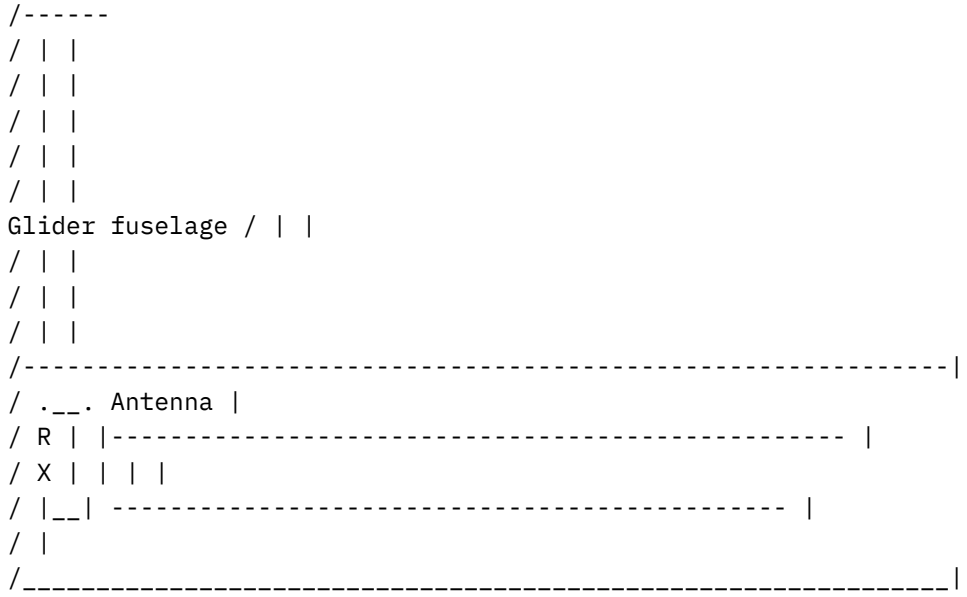
1. R/C model antenna orientation?

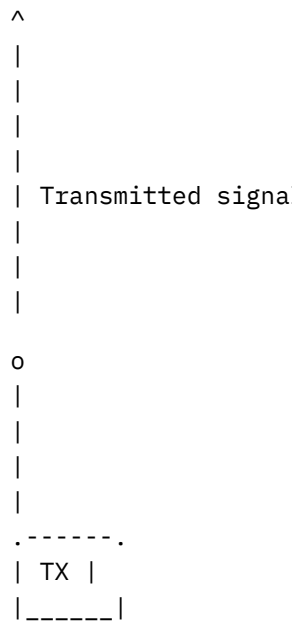
Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 00:29:53 UTC
From: dls@ce.Berkeley.EDU
Message-ID: <2uvo21$r30@agate.berkeley.edu>
Source record: 264295

I wonder if any interested ham operators can help me with an antenna question. I am not a ham myself, but sing the praises of you guys all the time, and find myself now with a question that I need help with.

I fly radio controlled model gliders, using one of the assigned channels in the 72 MHz band. The typical receiver for these model aircraft has an antenna consisting of about a 40" length of slender flexible wire extending out the rear of the receiver case, which itself is usually mounted near the front of the glider fuselage. It has been my habit to extend this antenna rearward through the aircraft fuselage and out the back, such that when the model is airborne, the airstream tends to extend the hanging portion of the antenna and it appears to the environment like a horizontally oriented item. For cosmetic reasons, i.e., so as not to have unsightly wire hanging out the rear of the model, I am tempted to loop the antenna back on itself inside the fuselage.

If I extend the antenna through the fuselage, and then loop it 180 degrees back towards the front, am I creating a situation whereby the received signals on the two antenna halves are effectively cancelled out (exactly out of phase), leading to zero received signal? Please see the crude diagram below. The spacing between the looped antenna halves would be about 1", which is such a small fraction of the ~ 164" wavelength, that it makes me think that doubling the antenna back on itself this way might lead to total cancellation of signal. But, knowing very little about RF, I would like to learn from others here.





Thanks to any and all who can help me see the wisdom of doing this (or not). I really can't afford to experiment with the craft in the air, and I would like to be more firmly grounded in the theory of what might be occurring. In other words, I wanted to be the only "grounded" item here, and I want my glider soaring gracefully above me.

2. How to get to Livermore hamfest ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 00:45:38 UTC
From: ron@etch-eshop.Berkeley.EDU
Message-ID: <2uvovi$r9f@agate.berkeley.edu>
Source record: 264296

I'd like to go to the Livermore hamfest this weekend.
Would anyone care to give me directions ? I need to know
wich exit to take off 580 going east from the 680 interchange.

Thanks

Ron Viegelahn,KE6GLZ

3. help w/ yaesu pa-6

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 01:05:45 UTC
From: koechig@garnet.msen.com
Message-ID: <2uvq59$b1t$1@heifetz.msen.com>
Source record: 264298

I have the Yaesu PA-6 dc car adapter which worked fine when new but has recently developed a problem. When plugged into the source and not under load it has the required voltage present but under load it dies. I suspect it to be the voltage regulator inside but I'm not positive. How do I check the regulator and if it is the regulator, can I use any comparable regulator with no problem?

Thanks,

Bill Koechig,
N8PKA
Pontiac, MI

Eastern VHF/UHF meet

The 20th Eastern VHF/UHF Society Conference will be held August 26
to 28 at the Quality Inn and Conference Center in Vernon,
Connecticut.

A hospitality room opens at 4 PM Friday the 26th; registration and
formal talks and demonstrations take place on Saturday, followed by
door prize drawings, pre-amp noise figure measuring, and an evening
banquet. Sunday events include a swap meet and antenna measuring,
beginning at 8 AM.

Talks already scheduled include: Paul Wade, N1BWT, parabolic dish
design; Jeff Klein, WA2TEO, VHF contesting strategies and results;
Larry Filby, K1LPS, low-cost 10 GHz wideband FM gear; Peter Traneus
Anderson, KC1HR, digital receiver design; David Upton, WB1CMG,
practical solid state amplifier design; and Emil Pocock, W3EP, QST
VHF columnist.

Proceedings of the conference will be published jointly by the
society and the ARRL.

Anyone wishing to contribute a paper to the conference should
contact Ron Klimas, WZ1V, 458 Allentown Road, Bristol CT 06010
(Internet Email: klimas%uhavax.dnet@ipgate.hartford.edu).

Video's a winner

''Ham Radio Horizons,'' a video introduction to Amateur Radio produced
by CQ Communications, has won a bronze medal in the Association for
Visual Communicators' 1994 Cindy awards competition.

The video won in the ''public service and information'' category. The
Cindy awards honor outstanding productions in all fields of
non theatrical video programming, including radio, television,
cable, and non broadcast categories, according to a press release
from CQ.

''Ham Radio Horizons'' was written, produced, and directed by Rich
Moseson, NW2L, who is ARRL Northern New Jersey Section Manager as
well as a member of the ARRL's volunteer Public Relations Committee.
The awards were presented in June at the INFOCOMM trade show in Los
Angeles.

ARLD038 DX news

The items in this week's bulletin are courtesy of Larry, WA9MAG, the Northern Illinois DX Association, James, 9V1YC, and the Yankee Clipper Contest Club PacketCluster network. Thanks.

HUANGUAY DAO, AKA SCARBOROUGH REEF. This weather hampered operation ran only 14 hours. Though limited to SSB only, nearly 2,000 QSOs were made, nearly half of which were with stateside stations. For the lucky few, QSL via W6CF.

MOROCCO. Valentini, IK4JQO, will sign CN2VA from August 6 to 22. This SSB only operation will be on 80 through 10 meters with special emphasis on the 17 and 12 meter bands. QSL via IK4JQO.

GLORIOSO ISLAND. FR5ZQ should be active during July and August.

HAITI. Television news agency employees N4MU and W6RCL are assigned to Port Au Prince. They are both active signing their calls /HH2. Both operate SSB only. Check 14190 kHz at 0300z.

THE CONGO. Rudi, DK7PE, plans to start his one week TN operation around July 10. The call TN0CW has been requested. QSL via DK7PE.

TANZANIA. R3ARES, the club station of HQ Russian ARES, has moved to Tanzania from Yugoslavia and is now on the air as R3AREX/5H. The rescue team from the Russian Ministry of emergency situations is providing humanitarian UN aid for Rwanda refugees in Tanzania. Check the Russian ARES Net on 14292 kHz at 0700 and 1700z. QSL via RW3AH.

VIETNAM. Paul, AA2AV, and Mike, KM1R, are supposed to be active until July 2, however our local PacketCluster node has no QSNs as yet.

SINGAPORE. 9V1ARU of the Singapore Amateur Radio Transmitting Society will be on during the upcoming IARU contest under the HQ category, an official IARU region 3 member organization. Operators include 9V1YC, 9V1ZB and JE1JKL. This will be the very first Singapore multi-op station in an international contest.

```
+-------------------------------------------------------------------------------+
HOW TO ACCESS THE WB3FFV AMATEUR RADIO TELEPHONE BBS !!!

I have placed a BBS system on-line that is mainly oriented towards the
Amateur Community (but there are plenty of other wares on-line). Through
user support I hope to keep the latest and greatest ham software on-line.
The BBS also offers access to nearly all of the Internet (USENET) NetNews
groups, plus access to Internet E-Mail. Below is the information that is
needed in order to access the BBS via Telephone, please pass it around to
as many ham's as possible.

System Name: WB3FFV
User Login: bbs

410-661-2475 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.Fast,HST,V.42bis)

410-661-2598 - 12/24/48/96/14.4/16.8/19.2/21.6/28.8
(V.32bis,V.32terbo,V.Fast,HST,V.42bis)

410-661-2648 - 1200/2400/4800/9600/14400/23000
(MNP2-5, V.32bis, V.42bis, Turbo-PEP)

Data Settings: 8 Bits, NO Parity, 1 Stop Bit
Times: 24hrs/365days (except for routine maintenance)
Software: UniBoard UNIX BBS Software (Version 1.21g)
Misc. Info: Machine is an 80486-66 running UNIX System V Release 4.2
and features more than 3 Gigabytes of on-line file storage.
Most transfer protocols are available!!
Sorry, FTP access is NOT currently available

I attempt to keep the latest and greatest HAM software on-line, and encourage
all to upload anything new that they come up with, as it is of benefit to all.
Here is a sample of a couple pieces of software that is available for DOWNLOAD:

KA9Q TCP/IP Software for the PC (Latest OFFICIAL release + TEST Versions)
KA9Q TCP/IP for the Atari-ST, MAC, & Amiga
KA9Q TCP/IP for UNIX based systems
KA9Q TCP/IP (The NOS release) [UNIX, MS/DOS, Amiga]
KA9Q TCP/IP (Version by G1EMM, PE1CHL, PA0GRI, Etc.)
N2GTE Packet Message Switch [GTEPMS]
WA7MBL BBS for the PC
W0RLI BBS for the PC
MSYS BBS for the PC running KISS TNC's
AA4RE BBS for the PC (plus BETA versions)
F6FBB BBS for the PC
G8BPQ PC-Node (Version 4.06)
```

Various BBS utilities and enhancements
Several MORSE CODE Tutors
TheNet software by NORD><LINK
Modifications for many HAM Rigs and Scanners
Digital Signal Processing software (DSP)
DX and contesting programs

If you have any questions or problems, feel free to contact me at one of the numbers/adresses below. Good Luck, and Enjoy...

```
Archive-name: radio/rec-radio-info/welcome
Last-modified: $Date: 1994/01/02 22:00 $
Version: $Revision: 1.06 $

*** Welcome to rec.radio.info! ***

Welcome to rec.radio.info, a group that aims to provide a noise-free source
of information and news for the entire rec.radio hierarchy.

Two introductory articles about rec.radio.info are posted to the group and
to news.answers every two weeks. You are now reading the first article, which
explains what rec.radio.info is, and answers some Frequently Asked Questions.
The second article is titled "Submission Guidelines", and you only need to
read it if you want to submit an article to rec.radio.info.

You can skip to the next section of this article by searching for the next
" -- " string. The sections available are:
- What is the purpose of rec.radio.info?
- Why are messages almost always cross posted to rec.radio.info?
- What is a 'follow-up', and what does 'moderated' mean?
- OK, so now I know what 'moderated' means. Tell me more.
- What type of material is considered inappropriate?
- I do not have access to news, how can I get the information posted to
rec.radio.info?
- Will the material appearing in rec.radio.info be archived somewhere?
- I have a regular posting with timely information, is there a way to
speed up it's delivery, or automate for more convenience?

-- What is the purpose of rec.radio.info?

The purpose or charter of rec.radio.info is to provide the Usenet community with
a resource for information, news, and facts about any and all things radio.

All the other rec.radio groups are intended for discussions and general chit
chat about radio. Rec.radio.info will contain informational, factual articles
only. Follow-ups are redirected to an appropriate other group, and further
discussion (if any) will not take place in rec.radio.info.

In order to ensure that rec.radio.info contains only appropriate articles, it
was decided to create the group as a moderated newsgroup.

-- Why are messages almost always cross posted to rec.radio.info?

It provides a "tag" for each article to be assembled into a filtered
presentation in rec.radio.info (even with cross-posting, only one message, with
```

a unique Message-ID, is propogated across the net). This tag also facilitates a pre-existing method of dropping or cancelling the articles locally within the discussion groups if you don't want to see them. This accommodates individuals who want to separate the bulletins from the discussions, discussions from the bulletins, as well as those who are adamant about not reading another newsgroup and wanted to see everything all in one basket.

With the total size of Usenet (in number of newsgroups and total traffic) doubling every year or so, this is no insignificant contribution to reducing information noise and chaos. Making the discussion groups a catch-all, and making extra newsgroups filters on that catch-all, is also the most realistic way to implement such a scheme (It's not intuitively obvious what the charter, contents, and general appropriate topics for each and every newsgroup are. Seeing FAQ's and charter/intro postings in the home newsgroup is beneficial for new readers).

By cross-posting one only is adding a few tens of bytes to each bulletin (to specify the extra group on the Newsgroups line), but are adding the capability for very powerful filtering features available on most news servers, listservers and readers. Your local news guru could probably explain these features in more detail.

In rn, for example, according to Leanne Phillips in her rn kill-file FAQ, add a line of the form:
/Newsgroups:.*[,]rec\.radio\.info/h:j
either in ~/News/KILL (if you don't want to see rec.radio.info articles anywhere) or ~/News/rec/radio/amateur/misc/KILL (if you don't want to see them just in rec.radio.amateur.misc). The latter method means your kill file will only be consulted during rec.radio.amateur.misc (and hence runs more efficiently), and will probably work for most people.

In nn, according to Bill Wohler in his nn FAQ, add a line of the form:
rec.radio.info:!s/:^
in ~/.nn/kill (if you don't want to see rec.radio.info articles anywhere), or put the following lines:
sequence
rec.radio.info
rec.radio.
at the end of ~/.nn/init in order to see all the rec.radio.info bulletins first, then read the remaining rec.radio.* without the bulletins.

-- What is a 'follow-up', and what does 'moderated' mean?

If you are new to Usenet and are not familiar with the terminology, you might want to read the general introductory articles found in the newsgroup news.announce.newusers. Doing so will make your life on the net much easier, and will probably save you from making silly beginner's mistakes.

If you think that at this moment you are reading an echo, a conference, or a bulletin board, I'd also strongly suggest a trip over to news.announce.newusers.

For the rest of this article, I will assume you have a basic knowledge of Usenet terminology and mechanics.

A moderated group means that any article that needs to be posted to the group has to be accepted by the moderator of the group. Since we need to ensure that followups to an article (discussion) do not show up in the rec.radio.info newsgroup, the `Followup-To:' header line contains a newsgroup that is appropriate for disussions about the specific article.

-- OK, so now I know what 'moderated' means. Tell me more.

Rec.radio.info is a moderated newsgroup, which means that all articles submitted to the group will have to be approved by the moderator first.

The current moderator of the group is Mark Salyzyn. Submissions to rec.radio.info can be posted, or e-mailed to:

rec-radio-info@ve6mgs.ampr.ab.ca

Comments, criticisms, suggestions or questions about the group can be e-mailed to:
rec-radio-request@ve6mgs.ampr.ab.ca

But before you do so, please be sure to check out the "Submission Guidelines" article.

The influence of the moderator should be minimal and of an administrative nature, consisting chiefly of weeding out obviously inappropriate articles, while making sure correct headers etc. are used for the appropriate ones.

-- What type of material is considered inappropriate?

There are three broad categories of articles which will be rejected by the moderator:

1) Requests for information: rec.radio.info is strictly a one-way street. I receive information in my mailbox; I then post it to rec.radio.info. Requests for specific information belong in the normal discussion newsgroups. If your request gets answered, you might consider passing the answer on to rec.radio.info, though. Especially if you can edit it into a informational, rather than a discussion, format.

2) Obvious discussion articles, or articles that appear unsubstantiated.

3) Commercial stuff: a relatively unbiased test of a radio product would be accepted, but any hint of for-profit might be reason for rejection. For three reasons: This is not the purpose of the list, for-profit is a controversial topic, and this list may be passed onto Amateur Packet Radio (where for-profit is prohibited except under certain provisos).

rec.radio.swap (or possibly comp.newprod) may be more deserving of the posting in any matter.

Similarly, copyrighted material generally cannot be used. If it's TRULY worthwhile to the net, I would recommend obtaining permission from the copyright holder. Please note the source, and if permission was given. I

reserve the right to make the final decision concerning appropriateness in all situations. In most cases, a brief summary of, or pointer to, the copyrighted information may be all I can allow.

-- I do not have access to news, how can I get the information posted to rec.radio.info?

brian@UCSD.EDU (Brian Kantor) has kindly supplied a mail list server for rec.radio.info. Non of the articles will be digested, due to their size, so you will receive individual mailings for every article posted to the group.

Mail sent to radio-info@ucsd.edu will be forwarded to the moderator and thus is an alias to rec-radio-info@ve6mgs.ampr.ab.ca

To subscribe and unsubscribe via the listserver; the format for that is

sub address radio-info
unsub address radio-info

where 'address' is your full mailing address. Send this request to

listserv@ucsd.edu

Note that the server will automatically delete any address that bounces mail. If you leave the address portion blank, it will try to deduce your address from the mail headers. This may not work if you are on bitnet, milnet or some other non-Unix host, so it is recommended to put your return address in any case. For example:

sub mymailbox@myhost.mydomain.mil radio-info
or
sub MEMEME01@DMBHST.bitnet radio-info

or something like that.

-- Will the material appearing in rec.radio.info be archived somewhere?

< Dated information here >

Yes. Still firming up details at the moment but here is a preliminary list:
- unbc.edu as maintained by Lyndon Nerenberg <lyndon@unbc.edu>
- nic.funet.fi maintained by Risto Kotalampi <rko@cs.tut.fi>
saved to /pub/dx/text/rec.radio.info currently stored as numbered files.

Effectively this means that anything you post to rec.radio.info will be permanently stored, so your work will not be lost.

-- I have a regular posting with timely information, is there a way to speed up it's delivery, or automate for more convenience?

Yes, there is! It may take a bit of chatter with the moderator, but we are willing to take responsible people and provide them the means of posting the articles directly from their site. We will try everything we can as we fully realize that DX (distant signal) and astronomical data can be somewhat

transitory. We are also willing to allow regular posters of information the same courtesy, even if the information is not as time critical.

We refer to this as self-moderation, which is partly based on the model for news.answer. This requires co-operation and good will to be beneficial to the community in the rec.radio hierarchy.

I suggest reading the posting guidelines for more information. I am open to suggestions.

I thank the following individuals for their input into this article:
rec.music.info moderator Leo Breebaart rec-music-info@cp.tn.tudelft.nl
rec.radio.broadcasting moderator Bill Pfeiffer wdp@gagme.chi.il.us
Paul W. Schleck, KD3FU pschleck@unomaha.edu
Ian Kluft, KD6EUI ikluft@uts.amdahl.com

10. Automatic HF channel allocation

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 03:05:56 UTC
From: saisk1@mdw074.cc.monash.edu.au
Message-ID: <2v016k$bc0@harbinger.cc.monash.edu.au>
Source record: 264299

Re: Automatic Allocation of HF radio channels

As part of my final year Electrical Engineering thesis project at Monash University in Melbourne, Austrlia, I have undertaken to research into 'Self Tracking Automatic HF Optimisation of Voice and Data'. The project work is on behalf of Melbourne based company, BHP Petroleum that make great use of telecommunication equipment in remote locations both locally and overseas.

The latest equipment I came across that handles automatic allocation of HF channels is the Automatic Link Establishment (ALE) 1045 controller.

I managed to get a copy of a brochure on ALE 1045 detailing its possible arrangement in conjunction with a PC, high speed data modem and an HF radio.

Having also read through the US Federal Standards 1045 on ALE titled 'Telecommunications: Radio Automatic Link Establishment', I would greatly appreciate further information on ALE or relevant equipment and about the possibility of transmitting voice as well as data using this system.

Could someone please clarify the following points:

AA) Is it viable to digitize and compress voice before transmitting it as data blocks but switching off the 'retransmission' mode to prevent echoes? What type of Codec might be suitable for voice digitisation?

BB) Can an ALE system be used to allocate the optimum HF channel at regular intervals and switch over to normal analog voice communication?

Any references to literature or technical articles would also be much appreciated.

Thanking in advance,

Shiraz Iskenderian,
Monash University.

Anyone out there know how to nicely adjust and "loosen" the action on the Ten Tec PTO (from Corsair, etc....). I just rebuilt mine, and the old problem is gone, but I continue to have awful backlash and would like a looser action. Any suggestions? I have added one extra washer (total 3 on each side) to the cup screws in the back.

13. Best basic antenna tuner reference?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 03:48:10 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <9406302047.aa04713@paris.ics.uci.edu>
Source record: 264304

Anyone can suggest a readable (to the novice to engineering)
text or article on the basic antenna tuner circuits? I would like
to learn the very basic circuits and be able to build up simple
prototypes to play around with. I have the ARRL Antenna book and
it is helpful, but not what I am looking for. For instance, I
know basically how the L-network looks and the Pi-network, but what
the heck does the Differential-T look like? How does the Z-match
compare? I want to build up the 5 or 6 basic tuners in small
form to see them operate and get a feel for them - as well as
read a little theory about them.

>de n1qdq

I have to agree. My th78a does very well. In fact a friend of mine who
is an avid Alinco nut is conserding the posibility of buy the 78 over the
alinco duel band TH (i think it is the dj-580) I really like the
extreamly low power option (.02 wats in VHF and .01 in UHF) as this is
enough power for close line of sight and allows the battery to last forever !
Use the low power with a vox in the ear mic setup and it works great for
hiking and biking. The only draw back is the folks at kenwood have decied
to switch the connector for the mic and speaker from the more standard
arangement. This may give you some grief if you want to barrow a friend's
headset. Or just get all your friends to buy kenwoods :-)

Dismondo.

Tip of the week: Head on down to the local sewing supply shop and ask for embroidery rings. These are pairs of concentric rings. In various sizes depending on your skill/ambition level. I've used the to make cage dipoles in the past. The only ones that really need reinforcement are the ones at the ends/middle where they connect to a single point such as an insulator or center connector.

On holding them in place, put the smaller one inside the cage, slip the larger one around the wires. Once in place to keep it there, use scraps of wire to twist across the hoop. (Same technique utility wiere are held onto insulators with).

Have fun. By the way, the concept behind the cage dipole is to broaden the bandwidth of the antenna. Somewhere it is written that the Q of a dipole is dependant on (among other things) the ratio of element diameter to length. building a cage (usually 6-8 wires) allows you to decrease the ratio and increase the bandwidth.

Date: Tue, 14 Jun 1994 08:52:00 -0700 (PDT)
From: "Muenzler, Kevin" <MUENZLERK@uthscsa.edu>
Subject: RE: EMF and Ham Radio Operators
To: QRP News Group <QRP@Think.COM>

It is quite true that at the power levels and frequencies that
amateur radio operators use pose little threat from EMF radiation
one must still be very careful when operating at the higher
powers and frequencies.

There are several rules that you should (MUST) follow:

** NEVER operate your amp with the cover removed!

This is specially true when operating 2 meters
and above. I have a friend who was almost totally
blinded after making "adjustments" to his 1KW
440 amp with the cover removed for several hours
of "testing." He also had to have one of his
testicles removed due to the "cooking" effect of
the radiation from his open amp. He stated that
there was no pain in his eyes. He simply woke up
the next day in a dark haze. He did however have
have significant pain a couple of days later in
the other area.

** As Dr Zabrodski stated, use the lowest possible power
when operating UHF handhelds (its the law also).

There can be significant heating of the retina by
UHF radiation, especially in the 900+MHz bands.
This usually causes no pain and by the time the
effects are noticed the damage is done and is
irreversible.

** NEVER look into the horn of a microwave transmitter (gunplexer)

If you can see the opening, you are being exposed.
It only requires a few milliwatts per square centimeter
to cause significant heating of the retina by a microwave

transmitter. As stated above, the damage is almost
never noticed immediately and is almost always irreversible.

I learned these, among other safety tips by working part-time
at KTSA/KTFM Radio while attending the University of Texas here in
San Antonio. When working around amplifiers that produce upwards
of 25KW and antennas with 100KW ERP ones learns about EMF safety or
goes blind and sterile.

Amateur radio is perfectly safe if practiced with a little
common sense. Follow the rules, use the lowest power to maintain
communications.

Kevin,

Legal stuff:
The above opinions are my own and not necessarily those of the staff,
faculty, administration, or lab animals (woof!) of The University of
Texas Health Science Center at San Antonio or anyone else who is
not me.

Kevin R. Muenzler, WB5RUE The University of Texas Health

Well, I do respect your opinion of the 890, it is a really fine little
rig. However, your advice is anecdotal, and is not correct in my
experience.

1. Kenwood service does not take a long time. I hear this once in
a while, but I have been to Kenwood service several times in the last
two years, and in only one case did it take longer than a week, and that
was for something really fishy with my 440. They have treated me well
and quickly lots of times.

2. Yaesu does not have a reputation for better audio than Kenwood in
my neck of the woods. In fact, the opposite is true, but I don't really
listen to the "reputation" stuff, go out and listen to each one,
the mike makes a difference, as does the individual voice. I have
heard some guys with 890's that sound great, some sound muddy. Same
with 450's.

3. I really admire Yaesu for designing an auto tuner that goes to 160,
that is the only real advantage I see in the 890, and it is a big one
to a guy like me. If my 10 year old Corsair wasn't far superior to
both rigs in basic receiver performance (flame on ?), I might consider
trying to get one of those little 890 rice boxes. Nice unit.

Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.7 05/28/94 14:31:40
Changes: List now in 2 parts, Ham origin moved to FAQ

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications
art, it is that "Hams" (Amateur Radio Operators) have always been on
the forefront of it. Rumors abound where the term "Ham" came from.
Some of the more amusing are described in the list of Frequently Asked
Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as
one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or
designing TCP/IP packet networks, such experimentation has historically
spilled over into the mainstream such as was the case with Edwin
Armstrong, who developed the regenerative oscillator and FM radio, or
General Curtis LeMay (W6EZV) who was instrumental in making Single-
Sideband the communications standard for the Strategic Air Command
(1947-1992, now reorganized into a joint command called USSTRATCOM) and
eventually the U.S. Air Force. Although packet-switching techniques
originated from DARPA (Defense Advanced Research Projects Agency) and
the ARPANet, no one can deny the tremendous influence that amateurs
have had in demonstrating the viability of TCP/IP and AX.25
communications via radio links. The efforts of AMSAT (the Amateur
Satellite Corporation), including the development of many ham satellites
and the low-orbiting Microsats (communications satellites no bigger than
a breadbox that use store-and forward packet techniques), have certainly
advanced the state-of-the-art in communications, one of the defined
purposes of the Amateur Radio Service, as recognized by international
treaty.

Since in many cases hams are writing "the book", there is often no
"book" or other established reference for a beginner to refer to.
Traditionally, information has been passed on from ham to ham via word-
of-mouth. Like many of the traditional crafts, a variation of the
Master-Apprentice system has emerged, the Elmer-Novice relationship.
```

Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@unomaha.edu, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to rec.radio.amateur.misc, rec.radio.info, rec.answers, and news.answers on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp.cs.buffalo.edu /pub/ham-radio/elmers*
rtfm.mit.edu /pub/usenet/news.answers/radio/ham-radio/elmers/*

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use.

(I'd appreciate feedback on whether or not you find them useful,
though.)

5. Internet Gopher: The latest copy of the list should be available
from the following Gopher sites, all at standard port 70:

cc1.kuleuven.ac.be
jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl

see also comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available
from the following WWW site:

URL: http://www.cis.ohio-state.edu:80/hypertext/faq/usenet

under pages:

radio/ham-radio/elmers/admin
radio/ham-radio/elmers/index
radio/ham-radio/elmers/list/a-m
radio/ham-radio/elmers/list/n-z
radio/ham-radio/elmers/diff

see also comp.infosystems.www

7. Wide-Area Information Service (WAIS): The latest copy of the list
should be available from the WAIS server at rtfm.mit.edu (standard port
210) in database "usenet."

see also comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining
assistance in the fastest and most efficient way possible. By
volunteering to appear on this list, you are contributing to the good
reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for
making this service a success.

From: mellis@ramcad.pica.army.mil
Message-ID: <Cs9Dpu.8Mt@pica.army.mil>
Source record: 264323

Came in the mail yesterday. Put them on in the rain :-)

17 weeks. I called NJ DMV early this week, and the person
I talked to said that theirs (Special Plates Division) was
the only division allowed to work overtime.

Seems NJ has a special plate for Square Dancing, for Penn
State Alumni, Rutgers Alumni, and lots of other interests.

Also, he said that prices on most special NJ plates (vanity, etc.)
will go up in the near future. Not sure about amateur plates,
that may require legislation to change from the current $10.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

++++++++++++++++++++++++++++++++++++++++++++++++++++++

David Andrews ZL2SX

andrews@kai.ee.cit.ac.nz
```

I have been involved with the Amateur Radio International Travel Host scheme. I also chair the NZART Frequency Management and Technical Advisory Group, which is responsible for all repeater coordination and band-planning (LF, MF, HF, VHF, UHF, and above) in New Zealand. I would be pleased to answer any queries with regard to reciprocal licensing or frequency coordination that may arise.

++

Jeff Angus WA6FWI

jangus@skyld.grendel.com

I run NOS as a tcp/ip <--> AX.25 mail bbs gateway. I also run a few nodes, And, I have successfully installed UUPC/extended 1.11k and SNEWS for those MS-DOS afficionados out there. SCO-Unix tcp/ip and sendmail coming soon!

ampr.org IP Coordinator for California - Los Angeles County (44.016.xxx.xxx)

Hardware, software and wetware questions answered either with correct answers or the name of someone who does know.

To contact: J. Angus PO Box 4425 Carson, CA 90749-4425 USA
Or Phone 1 (310) 324-6080 all day monday, 7 am - 10 am tuesday through friday, 7 pm - 11 pm tuesday through thursday.

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals in amateur radio. The first manual was the DJ-590 and subsequent manuals included the 560,580 and 600 for Alinco. My contacts in the amateur radio community have helped other amateurs to know more about products, hidden features and new product offerings. The BBS will now included the latest info on YEASU and ALINCO products. If you have a product that you wish to have evaluated for the general amateur community, please contact before sending.

If you have questions with regard to customer service at these companies, please forward to me and they will be passed to the company contacts.

* (508) 635-6300 NM1D AMPR: nm1d@nm1d.nh.usa.noam *
**/

Author of the following MS-DOS ham programs:

AutoExam - Examination simulator and study aid
AutoCW - Morse Code practice program
DOSGATE - allows users to run programs on your PC remotely (AutoExam
compatible)
AutoCall - Allows use of the Buckmaster HAMCALL CD-ROM online callbook
with DOSGATE
AutoFax - Allows reception of weather fax using Kantronics TNC's
SeeSats - Real time satellite tracking (text only), DOSGATE compatible

Most of these programs are available from wuarchive.wustl.edu under
/mirrors/msdos/hamradio or write me at:

7 Red Field Circle
Derry, NH 03038

and enclose:

A FORMATTED high density diskette (either 1.44 MB or 1.2 MB; 3.5" or 5.25").
A Self Addressed STAMPED return diskette mailer.
A note explaining that you want a copy of AutoExam and/or AutoCW
(or one of the other programs).

I am always receptive to individuals interested in maintenance,
enhancements, and non-commercial distribution for these shareware
programs.

==========================================================================
```

I've been playing with most models of Macs from the 512 on up for a
number of years now. I'm also great with DOS, UNIX, and my VMS isn't
too bad, either. :)

All ARRL bulletins are archived on the anonymous FTP site of
oak.oakland.edu in the Boston Amateur Radio Club FTP area:
/pub/hamradio/w1aw-list/

A mirror of all files available from the ARRL info server is also
available:
oak.oakland.edu:/pub/hamradio/ARRL

Amateur Radio Newsline is now also being archived, too:
oak.oakland.edu:/pub/hamradio/docs/newsline/

Co-sponsor (along with Phil Temples, K9HI) of the following
mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)
ky1n-list(KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)

ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

I want stories about automotive EMI problems, dealings with dealers, and, if possible, solutions. I plan to forward these to my contact at the Society of Automotive Engineers (SAE).

If anyone knows the *right* people at any particular company, I want to know. I am also pursuing (via the SAE) more official channels.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Electronic versions available soon. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey
just completed.

If you would like a copy of the survey, which includes a list of
telephone models checked, send an SASE with two units of first class
postage to the Technical Information Service at ARRL HQ. Alternatively,
you may obtain an electronic copy from the info server below.

Many amateur radio informational documents (including EMI/RFI files) are
also available from the ARRL info server. Send E-mail to info@arrl.org
with the word "HELP" in the message body.

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

My primary interests include: 6M AM, 10GHz, 5.65-5.925 GHz, 3.3-3.5
GHz, the fact of being a No-Code is not a crime, 2M AM, 2M FM QRP SIMP,
packet radio experimentation, mobile operations, NTS, VHF Contesting,
and of course... Army Mars.

If your interested in Army MARS, e-mail me. If your interested in Air
Force or Navy MARS, e-mail me and I will send you a list of those
members which I have compiled. Try to decide, then let me know.

I'm not the author of InstantTrack itself, but I was extensively
involved in its testing. I'm the author of OrbitDRV (the tracking TSR
that comes with InstantTrack) and a number of other InstantTrack
auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In the future, an archive of files will be accessible by anonymous ftp or possibly by email. In the meantime, check the host ucsd.edu by anonymous ftp for AMSAT-related files. Consult your local guru for help on using anonymous ftp.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum

for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list.
Simply address your message to amsat-bb@amsat.org, and
it will be automatically forwarded to all subscribers
to the AMSAT-BB mailing list.

Editors of publications should ask permission of the
sender before publishing anything seen in AMSAT-BB
elsewhere, unless the posting was obviously a public
press release. However, posters should realize that
anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian
element sets for satellites of interest to radio amateurs.
Like the ANS bulletins, these messages are posted in a
form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should
send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the mailing lists. Send them to listserv@amsat.org instead. This includes questions, requests for changes, requests for information about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing service may be obtained by requesting the "address book". Note that the address book as distributed contains only the callsigns of the available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous ftp as:

mipg.upenn.edu:/pub/yee/rptr010.Z

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to
mipg.upenn.edu:/pub/yee/uploads or via email to yee@mipg.upenn.edu.
The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent
troubles) are still current and most welcome. This repeater listing
will be of use if people take an active part in making it accurate and

useful.

+
+ Paul Williamson KB5MU
+
+ kb5mu@amsat.org
+
+ I'm not the author of InstantTrack itself, but I was extensively
+ involved in its testing. I'm the author of OrbitDRV (the tracking TSR
+ that comes with InstantTrack) and a number of other InstantTrack
+ auxilliary programs.
+
+ AMSAT-NA (the Radio Amateur Satellite Corporation in North America)
+ operates the Internet host AMSAT.ORG to provide for efficient
+ communications between people interested in the amateur satellite
+ program. At this time two services are provided: a message remailing
+ service and a mailing list service.
+
+ In the future, an archive of files will be accessible by anonymous
+ ftp or possibly by email. In the meantime, check the host ucsd.edu
+ by anonymous ftp for AMSAT-related files. Consult your local guru
+ for help on using anonymous ftp.
+
+ The message remailing service permits users to send each other mail
+ on the Internet without keeping track of each other's Internet
+ address. The remailing service allows each user to receive mail sent
+ to the address callsign@amsat.org, where callsign is that user's
+ amateur radio callsign, or other unique identifier. Mail sent to
+ that address will be routed first to the AMSAT.ORG host at UCSD in
+ San Diego, then remailed from AMSAT.ORG to the network address
+ specified by the user. In most cases, this process delays the
+ message by only a very few minutes.
+
+ The mailing list service groups subscribers into mailing lists to
+ receive certain types of messages. There are public mailing lists
+ available to anyone, and private mailing lists available only to
+ certain people (for example, AMSAT Board of Directors members or
+ PACSAT command stations). Currently the following public mailing
+ lists exist:
+
+ ANS AMSAT News Service
+
+ This mailing list carries official news releases from
+ the AMSAT News Service. These messages are posted in
+ a form suitable for direct posting to a packet radio
+ BBS system. Each message contains a Bulletin Identifier
```

+ (BID), which permits the message to be introduced into
+ the packet network at many places without resulting in
+ duplicate bulletins at any BBS. The primary purpose of
+ this mailing list is to distribute ANS bulletins for
+ redistribution (via the packet net or on AMSAT voice
+ nets), but individuals may also subscribe for their own
+ use. If your local packet BBS doesn't seem to get the
+ ANS bulletins reliably, you are encouraged to post the
+ ANS bulletins yourself.
+
+ Only authorized AMSAT News Service personnel should
+ send messages to the ANS mailing list.
+
+ AMSAT-BB AMSAT bulletin board
+
+ This mailing list carries general AMSAT information.
+ This information may NOT be suitable in content for
+ transmission via amateur radio, so automatic reposting
+ of AMSAT-BB messages to packet radio BBS's is discouraged.
+ The purpose of this mailing list is to provide a forum
+ for general discussion of any satellite-related topic.
+
+ Anyone may send messages to the AMSAT-BB mailing list.
+ Simply address your message to amsat-bb@amsat.org, and
+ it will be automatically forwarded to all subscribers
+ to the AMSAT-BB mailing list.
+
+ Editors of publications should ask permission of the
+ sender before publishing anything seen in AMSAT-BB
+ elsewhere, unless the posting was obviously a public
+ press release. However, posters should realize that
+ anything posted to AMSAT-BB is essentially public.
+
+ KEPS Keplerian Elements mailing list
+
+ This mailing list carries official postings of Keplerian
+ element sets for satellites of interest to radio amateurs.
+ Like the ANS bulletins, these messages are posted in a
+ form suitable for direct posting to a packet radio BBS.
+
+ Only authorized AMSAT News Service personnel should
+ send messages to the KEPS mailing list.
+
+ NASAINFO NASA related information mailing list
+
+ This mailing list contains information about current
+ and planned NASA space missions. Be forewarned: at times
+ this mailing list delivers many large messages.
+
+ SAREX Shuttle Amateur Radio Experiment mailing list

+
+ This mailing list contains information and press releases
+ pertaining to SAREX missions.
+
+
+ To obtain any of these services, just send a message to the address
+
+ listserv@amsat.org
+
+ This address may be reached from CompuServe MAIL as:
+
+ >INTERNET:listserv@amsat.org
+
+ For the moment, the maintenance of the AMSAT.ORG mailing lists and
+ remailing aliases is done manually. Later, this service will
+ probably be automated and you will have to follow a strict message
+ format. For now, you may send requests in free format. They will
+ usually be processed within a few days. In general, you will not
+ receive an explicit reply to your request. Be sure you specify:
+
+ 1. Which mailing list(s) you want to receive
+
+ 2. Your callsign, if any
+
+ 3. The Internet address to be used, if different from the
+ one in your From: header.
+
+ You should not send messages about your subscriptions to any of the
+ mailing lists. Send them to listserv@amsat.org instead. This
+ includes questions, requests for changes, requests for information
+ about mailing services, and complaints.
+
+ The list of amateurs who may be reached via the message remailing
+ service may be obtained by requesting the "address book". Note that
+ the address book as distributed contains only the callsigns of the
+ available addressees, not their actual Internet addresses. The address
+ book is updated occasionally, and does not necessarily contain the very
+ latest information.
+
+ You may request to be added to the list, to be deleted from the list,
+ or to have your Internet address changed on the list. Please include
+ your callsign if you have one. If you don't have a callsign, that's
+ OK, but please say so. If you have more than one Internet address
+ you want to have available on the AMSAT.ORG remailer, you may so
+ specify. For instance, if you have a regular Internet address and a
+ CompuServe account, you may appear in the address book as both w1xyz
+ and w1xyz-cis. Mail sent to w1xyz would go to your Internet address,
+ and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts
+ have the form w1xyz-mci, and so on.
+

```
+ You may also subscribe or unsubscribe to any of the public mailing
+ lists described above. Send a message to listserv@amsat.org,
+ specifying clearly which mailing list(s) you want to add or drop, and
+ giving your callsign if you have one. When you subscribe to a
+ mailing list, you will automatically be added to the remailing
+ service as well, because the mailing lists are maintained by
+ callsign. If you have more than one address listed in the remailing
+ service, please indicate which one(s) you want the mailing list
+ messages sent to.
+
+ Additional mailing lists, public or private, can be set up as needed.
+ Send mail to listserv@amsat.org for details.
+
+ Questions about any service offered by AMSAT.ORG may be directed to
+ listserv@amsat.org as well.

++++++++++++++++++++++++++++++++++++++++++++++++++++++++

30. Newbie license question -- change of address

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 13:05:03 UTC
From: fkilpatr@afit.af.mil
Message-ID: <fkilpatr.773067903@afit.af.mil>
Source record: 264192

I recently took my tech exam (May 16), and I'm now waiting the long four months for my license. However, I moved this week, and I'm not sure if I should file a change of address with the FCC, or if I should just wait for the normal Post Office forwarding. Can anyone give me any guidance?

Thanks
Alex

>I could find was an ARRL logo, which isn't much use in the UK). Does anyone
>have any ideas where I might find some on the net? (most formats will do).

> Thanks a lot,

> Rob (President UOWARS).

Rob,
If you dont find any reply's on the Internet you can call my BBS
direct, I have 2 files that contain various clip art for Ham Radio,
everything from the ARRL Logo's that you dont want to schematic symbols.

Most of the stuff is in PCX format. The two specific files I have are:
HAM-ART.ZIP and CLIPAR.ZIP These can be found in directory HAM-6 on my
system. The numbers are listed below.

RB 332 MGT Successful RACES Units 2/3
RELEASE DATE: June 27, 1994

This SUCCESSFUL standard came from the County of Orange RACES
unit via its April '93 newsletter, "NETCONTROL": [rephrased]

"Setting requirements of participation and adhering to them,
including removal of any who fail to participate in most
activation's and drills, or are inactive. RACES is a reserve
public safety communications organization that owes the public a
well-trained and active group. Being untrained or "unpracticed"
could cost a life during certain types of emergencies and the
RACES unit cannot afford to take that chance."

[Continuing extract:] "It is realized that other commitments
involving job, family and other matters must be made. If,
however, those commitments are more important to you than RACES
and prevent you from full support of required activities, then
you should not be a RACES member. If you do not put all RACES
drills and scheduled activation's on your calendar, you should
not be a RACES member. If you put scheduled RACES activities on
your SOCIAL calendar, to be at a lower priority than activities
on your "important stuff" calendar, you should not be a RACES
member. RACES is NOT a social activity (even though association
with fellow RACES members is enjoyed by many of us more than with
anyone else). RACES is a commitment to provide the very best in
government-supporting (sometimes life-saving) communications,
through continuous practice (by drills and reporting to all
activation's) and efforts toward improving ourselves and each
other technically and operationally."

While this is a painful procedure, it is better to have an active unit of 3 trained and dedicated participants than one with 13 untrained who are not familiar with the agency and are not dedicated to the unit purpose. In other words, let the luke-warm migrate to luke-warm efforts; keep only those who realize they made a serious commitment to the agency they signed up to support, and who are willing to show they can be relied on whenever that agency needs them.
EOM

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

RACESBUL.333 Mgt: Successful RACES Units 3/3
RELEASE DATE: July 4, 1994

Successful emergency communications units have their counterpart
in those that FAIL. While we may not want to look at the reasons,
it is instructive to do so:

1. One of the prime reasons RACES units fail is the attitude in
local government to the effect that "we have good radio systems
so we don't need anything else."

2. A second reason is that of mental approach to the use of the
unit, in that the local attitude is one of "we will call you out
if all other communications fail."

3. Local officials do not realize the significant difference
between a disciplined unit such as SAR and an undisciplined unit
with which it may have a communications memorandum of
understanding (MOU) [if that be the case.]

4. Not acquiring the knowledge of "how to" work with an in-house
communications unit.

5. The improper choice of the person for the Radio Officer.

6. Not realizing the importance of, and knowing how to discharge
a Radio Officer that is not fulfilling his/her purpose.

7. An unsatisfactory past experience with a volunteer in one
capacity or another.

8. Not having an adequately prepared RACES plan.

9. Inadequate staff. In such a case the local official, often wearing many "hats", feels there is no way to undertake a RACES program. In some cases that may be an accurate assessment, yet there are those where undertaking a RACES program even in face of an inadequate staff and too many "hats" helps to remedy the very problem.

10. Delegation of RACES program coordination to a technically oriented person rather than to one oriented to administration and management of operations.

To some degree, reasons that the creation, care and maintenance of an emergency communications unit fails is a reflection (as in a mirror) of the reasons for those that are imminently successful. Active involvement is the opposite side of neglect. Knowledge is the opposite of not caring enough to become knowledgeable. It's really up to the paid staff of the agency to learn what it takes to make a unit successful. In every instance that has been done it has more than paid off, and handsomely, at that.

Want help? The Auxiliary Communications Service at State OES Headquarters is available to assist a jurisdiction upon request. [Thanks to Orange County RACES for the material and ideas. End.]

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

35. Re: Wanted: Novice on-air CW practice

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 14:04:58 UTC
From: prvalko@vela.acs.oakland.edu
Message-ID: <2v17qb$asf@oak.oakland.edu>
Source record: 264181

I'll never forget asking a couple guys at a club meeting how fast they could send/rcv code... after having my novice licence for a couple months.

I just shook my head when they said something like 18 words per minute! I thought that to be absolutely impossible.

Don't be afraid to send QRS (send slower) it's not a crime to be a new ham.

73 es GL! paul wb8zjl

36. Re: Kenwood TS-450S/AT or Yaesu 890 w/AT -- HELP!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-01 14:05:22 UTC
From: ham@wam.umd.edu
Message-ID: <2v17r2$i25@cville-srv.wam.umd.edu>
Source record: 264180

It has been my experience that a lot of the equipment made by Kenwood
since they put out the 520/530/830/120 series has been flashy junk.

(Flameproof suit on)

I speak out of experience - we had a 930 that ate its PA board, which pro-
ceeded to take down the power supply. This took several months to
get repaired (circa 1987). We also had a 440S/AT that went to Field
Day in 1988. It was sitting in the back of the car in the sun,
probably at 110 degrees, and even after letting it cool off, it
had no frequency stability at all.

I was to buy a 440S/AT from a guy on internet. One of the main ICs
was apparently cold-soldered, and the freqency display would thus
go blank from time to time.

Go and get a Ten Tec. They may still have similar problems, but at
least they'll tell you how to fix them (or send you free replacement
parts), and they actually feel SORRY about you having to to go
through the trouble.

Hey Clark,

Boy! I didn't at first see that you were the guy responding to that post, I thought you were just another Kenwood Freak! I was wondering what "neck of the woods" you were from if you thought EITHER Kenwood OR Yasue had "good audio!" As I read it I though, sheeze, here's another clone that never heard a TenTec.

BTW, I've not heard a 890 compared to MY ten year old Corsair, and I also have come VERY close to buying one for portable/mobile use. But I'd not consider a TS450 after owning the 440Sat for a couple years and being able to A/B it against the Corsair.

: I have a Larsen NMO mag mount and the plastic on the bottom is ripped. The
: magnet has started scratching the car paint.

: Suggestions of what to use to replace the plastic would be appreciated.

My choice is the self-adhesive felt that is normally used to put under lamps and things to avoid scratching furniture. This stuff is cheap and available at any full-line drug store or hardware store. While this stuff is much thicker than an acetate sheet, I've rarely had problems with a Larsen mag mount & antenna blowing off--if anytime, usually by a semi passing in the opposite direction on a two-lane road when we're both doing about 60...I mean 55, and when we're both a bit too close to each other (and the antenna is on the left rear). After a rain or two, the felt mushes down, making for better magnetic hold.

Did you buy QJR's capacitor? I did for my loop, and was mighty impressed with the cap and the low price he got for it. Unfortuantely, the antenna fell in transit to my new home, and have yet to get the ceramics fixed.

What kind of stepper did you use? I went to H&R and got some airpax devices and the hurst controller. good enough resolution.

I'll second your comments. Hart's book is pretty good and points out what is important about building and using small loops. I took the relevant equations out of the book and programmed up a TK!Solver spreadsheet (you could do the same with MathCad or even Lotus) so I could fiddle with different designs. I never did get Hart's gamma match scheme to work, so I am now fiddling with the small coupling loop idea. I'm using a small vacuum variable cap I purchased from Surplus Sales of Nebraska to minimize capacitor losses.

> 4) Sell it at the next ham fest
> 5) Anywhere after the transceiver

>Thanks, 73s Tom WB7ASR...

>tom_boza@ccm.hf.intel.com

The answer is 1. The reason is as follows:

The transceiver is solid state and thus generates the most harmonics due to non-linear characteristics (this applies to all amplifiers). So if the the filter is between the rig and amp the harmonics from the rig will be attenuated and thus not have any chance to be amplified by the amp.

The second reason is (assuming a tube amp) that the amplifier basically has a matching network on both the input and output of the amplifier, what you are doing when you tune the amplifier is matching the output impedance of the tubes (the amplifier) to the antenna (50 ohms). Since this tuning process has a small operating range (also known as bandwidth) the harmonics never make it out of the amplifier.

Hope this helps.

> Also, what is that stuff that collects in your belly button
> called?

Converting inches to feet is simple, Doug.

1. Determine how many inches you want to convert to feet. For example, 24. Assign that to the variable, "I".

2. Determine how many toes are on the value you want to convert: feet. Assuming normality, for example, you might choose 10. Assign that to the variable "T".

3. You already know the factor for converting frequencies to antenna lengths, 468, since that was on the ham radio license test. Assign that to the variable "C". [Note - this project may be too difficult for Novice licensees.]

4. Insert the arbitrary constant 56160 to variable "V".

5. Compute the number of feet (F) by the formula:
I x T x C / V = F

Converting feet to inches is left as an exercise
for the stupi^H^H^H^H^H student.

See how easy the English system is, vs metric?

I'm still working on simple formulas to help you on the other conversions. Metrics are harder.

: give me any guidance?

This is only a partial answer to your question. You should definitely
file a change of address with the FCC by filling out another Form 610
and mark the change of address box. You should do this anytime you move.

However, you have a unique situation in that you don't actually have a
license yet, so you have to figure out what to do about getting your
initial license. My guess is that the post office forwarding should
take care of it - you might want to check with the post office about
how long the forwarding is in effect. Then, once you get your callsign,
file the form 610 to let the FCC know where you've moved to.

David Stockton (dstock@hpqmoca.sqf.hp.com) wrote:
: Alan Bloom (alanb@hpnmarb.sr.hp.com) wrote:

: : The laws of physics show no such thing. It is theoretically possible
: : for a small loop to be 100% efficient. It's true that it's hard to
: : approach that ideal in practice, but the Isoloop comes impressively
: : close.

: ... 100% efficiency can be approached, and the result on transmit is
: easily understood; all the watts you stuff up the cable get radiated.
: On receive, it is possible to get different levels of output from
: different 100% efficient, perfect, lossless antennae. The difference is
: in the effective capture area of different designs. ...

I can't tell for sure from the above quote whether you made the famous antenna aperture mistake or not. Please forgive me if the following is something you already know:

"Two antennas of equal gain have the same aperture."

For example, a dipole has an aperture of approximately 1/8 square wavelength. A small 100%-efficient loop antenna has only slightly less aperture (i.e. almost the same gain) no matter how physically small the loop is. It seems counter-intuitive that a loop with an area of 1/500 square wavelength can have approximately the same aperture as a full-sized half-wave dipole, but it's a fact.

Having said that, let me admit that in real life, 100%-efficient small loop antennas can be devilishly difficult to build. The radiation resistance of a small loop is proportional to the square of the loop area, which is proportional to the square of the diameter. So the radiation resistance is proportional to the FOURTH POWER of the loop diameter. For example, a 1-meter loop on the 20 meter band has a radiation resistance on the order of .04 ohms (as I recall). If the loop's loss resistance is a tenth of an ohm, then the antenna efficiency is only 29% (-5.4 dB).

AEA did a couple clever things to overcome efficiency problems in the Isoloop. One was to use a single loop coupling, which eliminates lossy matching coils or transformers. The other was to use a split-stator capacitor, which removes the need to run high circulating currents through a sliding contact. I noticed that the person who designed the QST article's Isoloop clone missed that subtlety in the design.

I have been in OHIO for 3 years and I have been identifying myself as
N8/SV2ABQ

It could have easily been W8/SV2ABQ or K8/SV2ABQ !!!

The usual is to use W8 (or the appropriate number for the call
district); or KH6 or KL7 or KP4 if you are visiting, say, Hawaii or
Alaska or Puerto Rico.

(As courtesy to the country you are visiting you preceed your
callsign with its prefix)

In the case of Canadian hams, this is governed by the reciprocal
agreement between the two countries; I don't know the answer, but I
think this may be incorrect for hams from Canada.

How did you operate a 9A station? I coordinated the Clear Lake ARC's Field Day using 5A with a Novice/Tech + and OSCAR (145MHz and 430MHz) and we had terrible interference between the HF rigs-- if you were monitoring on one band and another station keyed up, you heard "CQ Field Day" from the nearby tranceiver that would swamp out any other signal you were trying to receive.

I don't think it is necessarily true that solid-state -> higher harmonics.

Regardless of this, though, modern transceivers have a bank of
low-pass filters that are switched into the output line dependent on
operating frequency. These filters assure that the transceiver
exceeds Part 97 requirements over the entire spectrum.

>The second reason is (assuming a tube amp) that the amplifier

Well, imperfect components rear their ugly heads. The tuning networks
you describe are made out of solenoidal coils and wire-connected
capacitors that become something else at VHF. These components don't
supply the rejection you might think they do up there at the 23rd
harmonic. And he *was* asking about a TVI filter. Those are designed
with a 41 MHz corner, at least an 80 dB/decade roll-off, and shielded
compartments between sections.

However, in this era of zero-bias triodes, most amplifiers run class
B (linear), even for CW. So the prime culprit in amateur-caused

TVI cases, the over-driven, class-C operated, plate-modulated final tube sitting on a breadboard has, thankfully, faded into history. Today's HF rigs, even the max. power jobs, are pretty clean well up through VHF.

I still opt for 2), although it's more of an insurance policy.

I thought this was the way, too. Apparently the legal way to do it is

VE3/NF3I, as I'm operating in Canada but using my own call.

Similarly, when a VE station (VE#XXX) is in Michigan (8-land), he would
sign W8/VE#XXX, NOT VE#XXX/W8. Just the legalities of it; it doesn't
really matter to which which anybody actually does, as the general idea
still comes across.

Call area 0 Colorado, Kansas, Nebraska, South & North Dakota, Minnesota,
Iowa, Missouri
1 Maine, Vermont, New Hampshire, Massachusetts, Rhode Is.,
Connecticut
2 New York & New Jersey
3 Delaware, Maryland, Pennsylvania, and District of Columbia
4 Virginia, Kentucky, Tennessee, North & South Carolina,
Georgia, Florida, Alabama
5 Mississippi, Louisiana, Texas, Oklahoma, New Mexico,
Arkansas
6 California
7 Arizona, Nevada, Utah, Wyoming, Idaho, Oregon, Washington,
Montana
8 Ohio, Michigan, West Virginis
9 Illinois, Inidana, Wisconsin

Good luck.

W3QV, 9A, Eastern PA.

N3IEI was the one primarily responsible for running the show.

Well, we were at the antenna site for all the commercial TV stations in the
Philly area. Surprisingly, we did not have trouble with interference with
their HIGH power transmissions. AS for interference between ham stations,
we were in the middle of a field so were able to spread out a bit. Some
antennas were strung out on the TV station towers. Others used their own
stand alone masts. A cherry picker was available to string up on trees.
Due to the ability to spread out all over the place and the ability to place
antennas whereever we wished, there were no interference problems.

It helps when one of they guys running Field Day is the network's VP in
charge of engineering :) Using company equipment was no problem (i.e.,
toilet facilities, emergency generators, towers). I got a great tour
of the NBC (? Channel 3, Philadelphia) transmission facilities to boot!

Hi...

I'm wondering if anybody can help me with this problem that I'm having with my IC-229H... For some odd reason every few days, with the radio turned off, the memory in the radio is dumped, I've had the backup battery changed already so it couldn't be that. I don't know if this is a common problem or not, but if anybody knows what could be wrong please leave me a message, thanks. 73

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 1/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 1 JULY AND FORECAST UP TO 4 JULY

IPS Disturbance Warning 17 was issued on 22 June and is current for
interval 24 June to 4 July

1A. SOLAR SUMMARY
Activity: moderate

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 087/030

GOES satellite data for 30 June
Daily Proton Fluence >1 MeV: 2.7E+06
Daily Proton Fluence >10 MeV: 6.2E+04
Daily Electron Fluence >2 MeV: 4.8E+08
X-ray background: A7.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
02 July 03 July 04 July
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 089/033

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active

Estimated Indices : A K Observed A Index 30 June
Learmonth 22 4444 2244
Fredericksburg 17 17
Planetary 18 17

Observed Kp for 30 June: 3444 3333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
02 Jul 15 Unsettled to active.
03 Jul 20 Unsettled to active.

04 Jul 15 Unsettled to active.

2C. MAGNETIC COMMENT
No significant effect is expected from the M2 flare that occurred
late on 30 June.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
01 Jul fair-normal fair poor-normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
02 Jul normal fair-normal poor-fair
03 Jul normal fair-normal poor-fair
04 Jul normal fair-normal poor-fair
3C. GLOBAL HF PROPAGATION COMMENT
Geomagnetic activity continues to degrade propagation conditions at
mid and high lats.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values during local
daylight hours, and 15-40% enhanced during local night.

Observed T index for 01 July: 39

Predicted Monthly T Index for July is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
02 Jul 25 Near predicted monthly values.
03 Jul 30 Near predicted monthly values.
04 Jul 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Regular Sporadic E layer and Spread F may have degraded local
propagations conditions yesterday. Similar conditions are expected
for today.

Sorry, it's backwards, Scott. Americans in Canada and Canadians in
the US are supposed to put the identifies after their calls. You
should be IDing NF3I/VE3. See the relevant reciprocal treaty, TIAS
2508, in the back of the FCC Rule Book (Appendix 4) or in the library
if can find it there. It's not the same as for other countries.

As for using "N#" or "K#" as the identifier, it's not prohibited (that
I can find). Most people still use "W", though.

Oh, and one more joker. Reciprocal ops here and Americans in Canada
are supposed to give their location by city/town and
state/province/commonwealth/posession once per contact.

Of course, none of this quite qualifies as a hanging offense.

Well, if I were really paranoid about the signal that I was
putting into the local CATV lines and the power lines and the
phone lines (presuming that you, like me, were foolish enough
to sell a nice house in a reasonably quiet neighborhood with
all electrical and phone services buried under the old earth
and move to a main drag through a place where Ma and Pa Kettle
Meet the Dukes of Hazard), I'd put a low power TVI/LPF between
the transceiver and the kw amp and a high power TVI/LPF between
the amp and the antuna tenner and then I'd just sit back and
wait for the shotgun butts to start putting neat dents in your
front door (or the side of your head, if the door is on cheap
hinges, like mine). And then I'd join the QRP ARCI and the G-QRP
Club and give up. Or go after a DXCC on Internet.

I know it's dangerously cynical and probably not PC. But what
the hey, if I can't run power on the radio, I may was well
run off my mouth, eh?

Nils
WB8IJN (ex WP4DKA)
G-QRP Club #4182
QRP ARCI #3657
and a whole bunch of other stuff too boring to mention.

73. Repeaters in So. Calif?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-02 05:03:20 UTC
From: shopson@netcom.com
Message-ID: <shopsonCsArDK.MqF@netcom.com>
Source record: 264224

While studing for my license, I like to listen in on the conversations
that go on. I also found out that Gordon West does a On-Air Code
review and practice on Monday & Tues. 04:00 Zulu or 8:00 PM on
144.330 (Simplex)

What I would like to do is get a list of repeaters in So. California
that I can tune into. And when I get my ticket talk on. Does
anyone have a list or know where I could find one. Is there a repeater
guide published.

If you know of some repeaters in Southern California could you provide:

(2 meter for right now)

1) receive freq.
2) transmit/receive split
3) subtone if any

Once I'm able to transmit I want to be able to get on the air asap.
I currently have a 2 meter hand held, but will be purchasing
a home based rig once I'm licensed. I'm going to try for the
Technicion Plus (with code) when I test.

See you on the air....

From: awinterb@du.edu
Message-ID: <CsByow.70G@du.edu>
Source record: 264158

I'm not sure why, but in the past week or so, I've had qsos with a number of people who, in addition to telling me the temperature at their QTH, have volunteered the size and color of their socks. I don't know if this is the beginning of a fad, or if I've simply missed this bit of info in previous qsos, but I am now responding in kind.

However, in qsos with foreign amateurs, I wish to state my sock size metrically. Does anyone have a simple chart listing lengths in inches on one side and the metric equivalent on the other? Most of my socks range in length between 7 and 14 inches. A chart that could round off lengths to the nearest quarter inch would be most appreciated.

Art, N0OQS

P.S. Thanks for the responses to my previous posting requesting assistance with temperature conversion. 73.

Give the Amateur Radio Relay League (ARRL for short) a call at
1-800-326-3942 and ask for their "New Ham" information package.
Also, consider buying a copy ($20) of the book: "Now You're
Talking" which is the beginner book for getting started in amateur
radio. The book is sold through the ARRL and is usually carried
by most Radio Shacks also.

As a backpacker, I think you'd be well equipped with one of the
HTs (stands for Handi-talky which many people would think of as
a Walki-Talki using older terminology). One of the least expensive
HTs is put out by Radio Shack (lists at about $250 but goes on sale
periodically for less). You can use almost any HT in a car with
a cigarette lighter adapter and an outside antenna, or you can buy
an actual mobile radio for about $300-$350.

Hope this helps and I think having an amateur radio along may open
many additional opportunities for you, not only for safety, but
just as part of your hiking routine...you'd be surprised how far
you can send and receive with only 2 watts of power from the
top of a mountain or ridge line.

Cheers,

There was a time when 'CQ' was being actively discouraged on 2 meter FM.
I remember when I got reprimanded by somebody for calling CQ the first time
I tried using a 2 meter repeater back in the early 70's. Of course I called
CQ about 20 times before signing my call :-)

To avoid using Q signals on voice as well as trying to sound more human, I
use the following call or variations on FM simplex:

"This is WA7LDV listening. Is anybody out there? Hello anybody!"

Experience has shown me that just saying 'listening' or 'monitoring' won't
get a rise but add a little more bait and you can catch them.

Let me throw in my 2 cents:

I am a tech class ham and have had my ticket for about 7 months. I got my license to get away from the foul mouth people that inhabit the CB bands. In all my months of operation (and about a year of just listening), I have only heard one gentleman use one profane word, and he immediatley appologized for his slip. The first time I listened to HF transmissions on 80 meters, I heard enough 4 letter words for an R-rated movie. I have listened to other QSOs and have heard even more profanity. I don't talk like that and I don't want to listen to it.

So, to bring this post to a close, the real barrier for me is not CW, but it is the desire NOT to listen to a bunch of foul-mouthed CBers turning our HF amateur bands into other CB bands. I am very content with my tech priviliages. I wonder how many other hams have been kept away for the same reason.

I don't intend this post to offend anyone, but I just want to let everyone know that there are other barriers besides learning CW

Source record: 264130

I've got one.

It was 1963. I'd just graduated from high school, and was invited by the Martin Marietta radio club to operate their 20m CW station on the night shift like I'd done the previous year. The setup was south of Denver on a sagebrush-covered prairie. We had a KWM-2, and the antenna was a Hornet Tribander on a 20-foot aluminum tower, guyed to the sagebrush. Rotation was by means of a rope tied to the boom and also tied off to the sagebrush.

I got off work in the late afternoon, and my Technician-class friend (I'll call him DR) and I arrived a little before dark. After convincing the on-duty crew I could handle a key, they left the station to DR and me. After a while, it seemed to me that we weren't doing as well as I thought we should. All beams were a little different, and you couldn't always tell by the physical length of the elements which element in a tribander was the director, so I wondered if maybe the beam was turned the wrong way. So I asked DR to turn the beam while I listened to the signals. "Where's the rotating rope?" he asked. I shone the flashlight out the tent door until it intersected the rope, and out he went. For a while I didn't hear any change in signal strength. Then I heard DR mutter, "Man, this sure is tied on tight!" . . ."Ah, there I've got it". . . About then it dawned on me what was going on. But too late. "Oh, no!" from DR. . . then the crash, and the rig went silent. The good news is that it missed the tent. The bad news is that the beam was completely destroyed. The gamma match was a pretzel, and the element tubing was collapsed in several places.

We tried to find the owner of the beam but he was asleep, and we decided not to wake him up to tell him the news. In the meantime, we backed up my car (actually, my parents') and kluged the feedline to the Master Mobile whip I had on a bumper mount. We used that antenna until morning. Once in a while somebody would come by with the comment "Gee, I thought we had a beam for 20. . ." The dreaded moment arrived when the owner awoke. He was a forgiving sort and apparently fairly well-heeled. This was his "spare" beam, and he said to forget it (to our great relief, because we didn't know how we'd be able to pay for it). He said they'd make a club project out of fixing it. We put the mobile whip up on the tower and it was the 20m antenna for the rest of Field Day.

Postscript: I went off to the service (as lots of people did about then). When I returned I went back to school and ended up rooming with DR at the U. of Colo. He had been going to school at the Denver extension. One of his classmates found out he was a ham, and offered to sell him a beam -- cheap. "What's wrong with it," DR wisely asked. The response: "Oh, it was on a tower at Field Day a few years ago and some idiot untied the guy rope and smashed it." He didn't buy it. ("Idiot" or not, he wasn't stupid. . .)

Somehow, Field Day has always seemed so uneventful since. . .

Can anyone help with boosting the audio output from the HM-56 microphone on my IC-2410H? I get low audio reports on the repeaters around town (Austin). I opened the cover, but only saw R16 and R19, with no indication of how the gain might be boosted. They are apparently only surface mount fixed resistors. Is there some adjustment that is located under the PCB? I am reluctant to tear into the other side of the PCB unless there is some assurance that there's a good reason to.

I'd like to hear from someone who has had experence with adjusting the audio output from the HM-56 mike.

Thanks + 73

[snip]

Yes. Exactly. The disposition of his application has NOT YET BEEN
DETERMINED. The FCC has not (to his knowlege) either processed the
renewal, or notified him that his license will not be renewed. Until he
either receives his new ticket, or a notice that he WON'T be receiving
one, he may continue to operate. That is my interpretation.

Well, it did say 6-10 months. I sent a report in back then, too, and I'm still waiting. 'Progress though patience'

Patience is the order of the day, for sure. Gathering together the logs from the mission is one of many things that need to be done when the shuttle is swept out and the ash trays emptied between flights. Then cards have to be printed, the pile of received cards sent to the volunteer QSL manager(s) to be correlated with the logs, etc. I am expecting to be involved with this program for a later mission, and will report on what is involved when I know more about it. So, please, patience (pretend it's like the bureau :-)).

I was with the Santa Clarita Valley Amateur Radio Club 3A station in Saugus, CA signing W6JW (Whisky Six Johnny Walker). One annual tradition of this club is the erecting of our "Balloon Vertical" for 80m. The vertical is supported by five weather balloons. It is erected at dusk as soon as the wind dies down. The slightest breeze changes the vertical into a sloper!

I helped set up our station and immediately tried to catch some sleep to prepare for the night shift ahead. Hah! Spend the morning setting up stations and then not operate! Finally got about an hour of sleep. Woke up when the BV was being erected. Old war-surplus balloons seemed to be pretty fragile! Antenna went up, tuner matched it nicely, and it went on the air. Suddenly the 30-watt rig could get out much better. I worked the 12:00-8:00AM (local) shift and cranked out a bunch of contacts on 80. Just before sunrise, signals seemed to drop a bit, but still had plenty of workable stations. Worked to pull an AZ station out of the mud and he said "gee, your signal just dropped a lot" Looked out in the morning twilight and saw one lone balloon holding up about 10 feet of the vertical, the rest laying on the ground zig-zagging over the insulated wire radial system.

No wonder my signal had dropped!

Next year: new balloons, regardless of cost!

Also have to scrounge up a little flourescent tube to put at the top. Looks neat when it lights up the balloons when you transmit. Also makes it possible to read the CW being sent from anywhere in the site. We had one last year, but it got forgotton...

You may have figured out by now that scoring high isn't one of the big priorities with this group :-)

Things we learned:

Push up masts are just that. Put them upright, then push them up. _Not_ vice-versa!

It takes 600-800 feet of line to properly guy a 36' push-up.

1.5" PVC pipe makes a good mast for G5RV dipoles with 300 ohm feed.

Don't forget the stakes! A handyman jack comes in handy for removing ground rods and stakes.

That's all I have,

73, N7TNJ, George

> Does anyone know the frequencies of the most active 2m repeaters in
> the Denver, Colorado area. I will be there for a week and plan to
> take my HT with me.

The most active one I know about: 145.145
Other wide-area active ones: 145.280, 146.670, 146.940, 145.310, 147.225
145.310 also accesses the Colorado Connection linked system.

Wide-area Colorado Springs repeater: 146.970
This one can be be accessed from along the Front Range from almost the
north end of the state to the south end (Cheyenne Wyo, to Trinidad CO,
about 300 miles); favorable locations needed at the extremes.

Big Dog UHF repeater, also in C-Springs: 448.450
This one has about the same coverage as 146.970, a little more finicky
perhaps, but when you're in it it's clear as a bell.

Have fun,

-Paul C. KG0CZ

I hit a 14A on 40-m SSB, I believe. Heh, I was a bit shocked when I QSL'd it. I can't imagine being on a site with 40 rigs in what sort of radius of one another? . . .

OK, it can be told. We were 15A: N1NH, the Nashua Area Radio Club, operating out of Hollis, NH (next town over from Nashua). While working 75m I contacted a 16A operation in Michigan. Our usual competition is a California club which has in the past operated 23A or 25A. I was told that they were out again this year, but I didn't reach anyone that far west this year on my station.

|> terms of gain and bandwidth?
|>
|> Thanks and 73,
|> Scott, WA2CJT

I have RR IIs on both 2m and 70cm. They perform well. The 2m antenna has an acceptably low SWR across the entire 2m band.

Be advised that the RR II uses several feet of the top of the mast it is mounted on as an active part of the antenna. A set of screw-on radials (connected to the antenna by coax) attach about 5' below the antenna itself. Make sure your mast is compatible!

My RR II came with a shorted coax, but a new connector later we were in business. An annoyance.

Gain is adequate for my situation. Gain figures are the stuff of snake oil. the local area is quite densly populated and I have no problems working stations 50+ miles away using 45W. Gain appears to be about the same as my 4-element yagi.

You will need a SWR bridge or analyzer to set a ringo up right.

Good Luck!

: It's no different with VHF equipment than it is with HF equipment. I guess I

In theory, no. But in real life, I appreciate that my HT won't let me transmit outside the bands while my base HF rig, although it can, is not a problem.

An HT gets bounced around a lot, and with the small display and tiny buttons can easily be misprogrammed or a key symbol (e.g. offset) missed when glancing at the display. It is really nice that it is watching out for me.

A base rig, no matter what band it covers, is used in a more controlled environment where errors should be less likely. It would still be nice to have it watch over your shoulder, but mine doesn't and I haven't had a problem with it.

I'm not in favor of requiring radios to enforce the law - the personal responsibility that is required of an Amateur Licensee is the proper way - but having a radio implement such features can enhance its usability, just as clear displays, easily followed programming steps, etc. can. All contribute to proper, legal, operation.

Greg.

Contest Weekend

Your Headquarters station, W1AW, will be active in the IARU contest
this weekend, from 1200z Saturday July 9 to 1200z Sunday the 10th.
Regularly scheduled bulletins and code practices will be suspended
for this operation. The contest exchange is RS or RST, and your ITU
zone. We hope to work you.

99. Best linear for scientific experiment

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-05 21:42:15 UTC
From: Winfield Hill <hill@rowland.org>
Message-ID: <2vclnl$pg4@nmr-z.mgh.harvard.edu>
Source record: 264149

I need your advice on a good transmitter for a physic experiment I'm working on.... Thanks in advance for any help. First some background:

Ham transmitters can be very useful in molecular physics experiments. For example, working on a cold-atom trapping experiment, I was able to get a 2000V 4MHz electric field on a wire, by using an old tube kw linear. I used a 50-to-12 ohm balun, plus a homemade 12-ohm non-inductive resistor and air-tuning coil, and was able to get the electric field across a 100pF load, with under 250W from the amplifier.

Now I'd like to make a more reliable and permanent setup. I'm looking for suggestions on the best brand/model of linear amplifier to buy for another experiment.

My primary criteria is that the transmitter amplifier be easy to modify! This is because I'll be working at 1.0 MHz, and also want very fast rise/fall times (a few microseconds, which means reduceing the tank Q). If you have an amplifier you're happy with, then look inside and see how accessible the pieces are, and guess as to its applicability for my strange needs! Better yet, if you've had good results and a happy experience modifying a certain amplifier model, please let me know!

Incidentally, my RF energy stays in a coax cable and thence to a stainless-stell vaccuum chamber, so meeting FCC rules isn't an issue.

P.S. Although I'm an experienced electronics engineer (incl low-power rf), I'm not a ham, and have only nominal experience with ham gear, brands, etc.

101. JPS NTR-1 for sale

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-05 22:28:28 UTC
From: ira@src.dec.com
Message-ID: <2vcmqc$ejr@src-news.pa.dec.com>
Source record: 264150

For sale:

JPS NTR-1 noise/tone reducer. $100 firm, includes shipping as below.

This DSP noise reduction system lists for $169.95 and includes the manufacturers 12V external power supply ($16.00). Total list price was $185.95

This unit is 3 months old and in like-new condition. Includes all manufacturer's original boxes, instruction booklet, warranty card, and 12V power supply. Price is $100.00 firm. I'll pay 1st class US postal shipping to any location in the lower 48 states. Price refunded if condition not as described.

Works fine. I would just prefer to put the money towards a new radio, rather than a quieter radio.

Reply via email (ira@pa.dec.com) or call 415-853-2160.

Regards,
Ira

103. Re: Does CW as a pre-req REALLY Work?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-05 23:05:27 UTC
From: lweissma@motown.ge.com
Message-ID: <2vcovn$emh@cnn.MOTOWN.GE.COM>
Source record: 264152

CW proficiency is a good pre-requisite for knowing CW, period. It does not mean
an individual will be a better operator than a non-CW person. I think the license
structure should be changed, so that no-code people can have HF voice privileges.
The commercial radio operators are split into two groups. Why not hams?
There should be more emphasis on good operating procedures. Also, I don't think
that the questions and answers for amateur licenses should be made available like
they are now. I feel it is too easy to get an amateur license and much too easy to upgrade.
Ham radio used to be a fraternity, it's become much less of one during my
25 years as a ham. However, the majority of the people on the air are worth talking
to and if some idiot wants to tie up a frequency, I can just tune somewhere else.
I don't agree with Andy Domonkos' statement that CW is courteous hassle-free
operation. There are LID's on every mode, although I feel CW op's have a little
more operating savy.
Except for most JA's, poor operating practices are common throughout the world.
Are test questions or CW proficiency going to eliminate poor operating, or will we
just continue to see a reflection of our societies on the air no matter what? I
don't have an answer, just an opinion. .... ..

Where have all the sunspots gone?

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 5/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 5 JULY AND FORECAST UP TO 8 JULY

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

GOES satellite data for 4 July
Daily Proton Fluence >1 MeV: 1.6E+06
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 7.3E+08
X-ray background: A6.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
06 July 07 July 08 July
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled 00-03UT, and quiet
thereafter.

Estimated Indices : A K Observed A Index 4 July
Learmonth 06 3121 1212
Fredericksburg 04 12
Planetary 07 11

Observed Kp for 4 July: 3332 2333

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
06 Jul 10 Quiet to unsettled.
07 Jul 10 Quiet to unsettled.

08 Jul 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
Coronal hole-induced magnetic activity observed 10-12 June is NOT
expected to re-occur during the corresponding period of 7-9 July, as
the associated coronal hole is no longer visible in X-ray images.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
05 Jul normal fair-normal fair
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
06 Jul normal normal fair
07 Jul normal normal fair
08 Jul normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
None.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T index for 05 July: 33

Predicted Monthly T Index for July is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
06 Jul 35 Near predicted monthly values.
07 Jul 40 Near predicted monthly values.
08 Jul 40 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Occasional Sporadic E layer was observed yesterday. Similar
conditions are expected for today.

107. FCC Reciprocal Permit for Alien Amateur Licensee

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-05 23:59:48 UTC
From: spahni@iwi.unibe.ch
Message-ID: <spahni.5.0017FFE5@iwi.unibe.ch>
Source record: 264148

I'v received the "Reciprocal Permit for Alien Amateur Licensee" from the FCC. I would like to be on the air in the USA this summer. Where can I get (via ftp, www, compuserve ...) more informations about FCC Rules and Regulations?

The main question for the moment is: what prefix/postfix do I have to use while operating in the USA, if any?

Second question: what frequencies am I allowed to operate on? (>144MHz). Do european versions of transceivers work in accordance to the regulations or do I have to reconfigure them?

Thank you all for any replies!

John Welch (jjw@seastar.seastar.org) wrote:

: (often being a single pulse wide for good SWR). In spite of the
: manual saying one did not need and should not use a tuner, there *is*
: a matching antenna tuner available for it. Think about this - why
: would they do that if the antenna truly should not be used with a
: tuner???
Huh...what tuner? Do you have an AEA part number? Or, are you referring
to the "Automatic Tuner" that AEA is selling for about $249. THAT
"tuner" is NOT an "antenna matching network", but is a box that replaces the
two-button manual "tuner" that COMES WITH the Isoloop. It has little dial
that is calibrated to move at the same rate as the capacitor in the
antenna, and allows you to repeatedly tune to the same spot (I think it
may also have an SWR bridge and be able to "read" lowest SRW, but I'm
not 100% certain about that.

: Untill somebody else will do a side-by-side comparison, I will
: stand beside the laws of physics that show smaller antenna size will
: mean worse performance, and the concept that if you could fit a small
: loop in the attic you could also fit a wire dipole in the same space,
: with the advantage of a wire dipole being the total system cost is
: drastically lower. In short, if an antenna sounds too good to be
: true, it isn't true. There is no snake-oil cure for size.

Well, OK - here's one for you (YMMV, of course). I have an Isoloop in
my attic. It's about 30' AGL, inside a cedar shake roof. The "loop"
is bent in what looks like a figure-8, to clear the rafters. I ALSO
have a 10M full wave "delta loop", with one piece of the triangle supported
by a mast that's about 16' (at the top) off my roof (I get away with it
because the antenna looks like "guy wires" from a distance, and my CC&Rs
say my anemometer is legal, but the Isoloop wouldn't be). Last
Saturday morning at about 0100Z, I had a QSO with a station in Utah on
10M. The band was in the process of 'closing down', so it was not a long
QSO, and it was kinda iffy, BUT, the Isoloop outperformed the Delta by
at least a couple of S units (ie, I could HEAR him on the Isoloop, and
he could hear me, but NOT on the delta). So, there you have it - your
side-by-side comparison, no snake oil, no nothing. BTW, there have been
OTHER times when the delta has outperformed the Isoloop - also, the
delta delivers about 1.2:1 SWR on the novice voice part of 10M. But,
don't take my word for it - I think the vast majority of the posts you
have seen here have been favorable toward the Isoloop - sure, it's not
a 4 el quad, but, for those places where a 4 el quad, or ANY outside
antenna is a hassle, it's a great alternative.

I have NO association with AEA, other than a very satisfied Isoloop user. These opinions are strictly my own, and have not been blessed by anyone, let alone my management. I just hate to see this sort of misinformation spread...

109. Re: Amateur calls on auto license plates?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-06 00:13:28 UTC
From: jta@kilroy.jpl.nasa.gov
Message-ID: <1994Jul6.001328.28043@llyene.jpl.nasa.gov>
Source record: 264161

Someone writes regarding his fears about ham call plates and an increase in the potential for radio theft.

I have thought about this many times while owning two vehicles with call sign license plates and many without:

1) A car bristling with antennae is always a car bristling with antennae.

2) Antennae indicate the potential for some kind of radio equipment inside. Anything that looks like a cell phone antenna will be assumed to be a cellphone antenna and therefore connected to a cellphone.

3) Bad guys generally do not know what "W2XYZ" or NW6H" or "XE3CCC" mean, any more than they know what "3EDR305" or "DES 944" or whatever means. Call sign plates that also include the words "AMATEUR RADIO" may be slightly more risky, but I have no proof of that. In fact, I would prefer plates that said that simply for political reasons.

4) I have never had a radio stolen from a vehicle and I have driven (and parked) all told more than 500,000 miles through a lot of bad parts of town.

5) Your mileage may vary.

6) Always engrave your drivers license state and number on all radio equipment that is installed into your vehicle. This sure will help if the cops find it and then wanna find you. They have no clue as to who "NW6H" is, but they sure can figure out who I am from my California DL.

7) Also engraving your call sign on the equipment may be handy if "bad hams" steal the stuff and try to sell it at the local ham swap meet. But there aren't any bad hams, are there?

8) I am mildly paranoid about delayed retribution from the many souls that incorrectly decide that I have just cut them off and terminally offended them; even though a license plate is a difficult (or at least more difficult thing than it used to be) thing to track down to its owner's address, the ease of using a callbook lookup (and of course you have to know where to look) has helped to change my callbook address to a post office box. But that's just a handy thing anyway, in case one of my fellow hams thinks that I have cut him or her off on the RF highway on 40m or 2m or some such place...

9) Some individuals might even go so far as to wire their radios to explode if removed without pushing the magic button. But that would be illegal.

10) If you're living in Manhattan, radios should be kept on your person at all times and never should an antenna be bared.

Good luck. Safe driving. 73 - Jon

110. License Renewal

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-06 01:21:16 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9406057734.AA773454716@smtpgty.anatcp.rockwell.com>
Source record: 264159

Jim, WK1V (sorry, I didn't capture his address) writes:

I can't tell who replied to whom now but looks like some
misinformation is being passed along here. Eric, you MAY NOT
operate until you receive a new license from the FCC. I'll tell
you why:

Well, misinformation is certainly being passed, the question is, by whom?
Yes he may continue to operate!

97.19(c) of the FCC Rules:

[When the licensee has submitted a timely application for renewal
of an unexpired license (between 60 and 90 days prior to the end of
the license term is recommended), the licensee may continue to
operate until the disposition of the application has been
determined...]

Yes, you stated that you submitted your renewal at around the 90
day point. But, your license has expired so the application was not
timely.

Jim, Do you interpret regulations for the IRS? Eric's application was
timely, in fact at the long end of the recommended window. The FCC's
processing of the application is not timely.

It's not your fault that the FCC is backlogged so much that it is
taking longer than the recommended 60-90 days for the renewal to be
processed.

Precisely! That is why the regulation allows for continued operation,
provided the APPLICATION was made prior to license expiration.

The 60 to 90 days is only a recommendation and in times like we are
in now submission should be done earlier, like 120-150 days.

Actually, if I recall a post I read earlier today, it seems that renewals
will not be processed with actions sent more than 90 days prior to
expiration of the license. In the past, any submittal of a 610 resulted in
a license extension. The new system at the FCC eliminates that "feature".

The keywords in the first half of 97.19(c) are [unexpired license].

Correct, unexpired at the time of submitting the renewal application.

Now let's look at the second half of 97.19(c)

Let's not, it doesn't apply [snip]

My point, Eric, is what if the FCC came to your house and caught
you operating? You present an expired license. What proof do you
have that you submitted a renewal application?

Hopefully, Eric kept a copy of his 610 on file, and will attest to the fact
that he mailed it on or about the date the original was signed. Ideally, he
has a postal receipt, or perhaps sent it registered, although I doubt it.

If I am incorrect in my assessment of this situation I'm sure
someone will let me know.

Happy to help. :-) I recall this being hashed out on the net about a year
and a half ago. The intent of the rule changes involved were to allow
continued operation if the licensee did their part on time, and provide for
keeping an existing callsign if you missed the renewal date.

I just got my plates after wanting them for a long time, well a year. And I don't think it makes me any more of a target than any one else with a largish antenna on his car. I have a glass mount, so that extra-large Cellular antenna may look a bit tastier, but I never leave my radio in the car and I always lock it.
I've been called radio geek by people who know what my HT is and yuppy by people who don't. I just take the mind that crooks are going to break in if they want to regardless of what I've got stuck to the outside of my car.
California ham plates look just like regular vanity plates except that the call sign is centered rather than being placed on the standard 7 letter stops.

Hi Warren,

It's possible for what you say to be true, but then why bother to have a lithium batter in there if you're gonna keep on drawing current even when shut off... I don't think it would make sense to do that... But at this point I might give it a try. I'll post anything that happens.

NOTE: The Effective Sunspot Number for 04 JUL 94 was 25.6.
The Full Kp Indices for 04 JUL 94 are: 3- 3o 3- 2+ 2+ 3- 3- 3-
The 3-Hr Ap Indices for 04 JUL 94 are: 12 15 13 9 10 12 11 12
Greater than 2 MeV Electron Fluence for 05 JUL is: 6.1E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. No optical flares were
reported. Region 7742 (S10W40) is simplifying. Region 7746
(N10E35) is growing.

Solar activity forecast: solar activity is expected to be
very low to low. Region 7742 is still the most likely flare
producer.

The geomagnetic field was mostly quiet. The greater than 2 MeV electron flux at geosynchronous altitude was high.

Geophysical activity forecast: the geomagnetic field is expected to be quiet to unsettled for the next day, becoming unsettled to active for the remainder of the forecast period due to a recurrent disturbance.

Event probabilities 06 jul-08 jul

Class M 05/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 06 jul-08 jul

A. Middle Latitudes
Active 15/30/30
Minor Storm 05/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 15/30/30
Minor Storm 05/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions today. Near-normal propagation should continue on 06 July. On 07 July, a recurrent coronal-hole related disturbance should begin affecting levels of high-latitude geomagnetic activity. This is expected to bring minor signal degradation to some high latitude night-sector paths, particularly those on transauroral circuits.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Richard,

I gladly USED to move off to another frequency, this past year I guess I'm being the brazen one, by some people's standards. I ran nets on 40M when I first got on the air, using a kilowatt, ground mounted 1/4 wave 40M vertical, and 40 buried radials. I had an excellent signal and ran net control on many occassions. There were times we moved the net up/down frequency if the main freq was in use.

My favorite is 'colliding' nets. I still get a kick out of listening to some folks hashing it away on 80M.

I'm glad we've got the WARC bands, 17M being my favorite. I've yet to run into that problem their. Congrats on the tech + and hope to work you one day...

Andy

Chuck,

No one should be discouraged from upgrading due to the mal-contents on HF. Ironically, many amateurs feared the worse when the no-code was started and I think it's brought in some of the most decent people I've yet met on the VHF/UHF bands. What I have seen the past 17 years is the HF bands degrade (20M and lower, 160M still seems decent, though). What we may be experiencing are the dying throes of elitists who will ultimately disappear from the HF bands in the future and make room for a more progressive, contemporary lot. The HF bands, after all, are NOT in danger of being removed (no commercial interest there, not enough bandwidth; UHF and above, that's another story...).

Source record: 264168

While on the subject of Isoloops, I worked AA9GT in Wisconsin today on 40M mobile and he swears by his ISOTRON that he uses for 80M (he has a tower, 3 ele for 10-20, 40M add-on for beam). That's the first report on the Isotron I've heard.

BTW, the one of the best fringe benefits I've had is 30M CW. The loop is so narrow on b/w that it makes using that band in the summer a pleasure compared to a full size.

Andy

Bret,

I'm in the communications consulting field; our major client base is the government plus some commercial (secure communications). I design and integrate comm systems in a multitude of applications. I've designed covert antennas and electronically rotatable arrays. It's about as close to playing ham radio as you're going to get. Look to companies like Watkin's Johnson, or as a start, some national consulting firms that specialize in secure communications (a fast growing industry).

What did I bring to the table? 14 years design experience using ASICs, FPGA's (Xilinx), A/D and D/A systems, high speed Fiber-Optic interfaces design; basically a background in analog/digital design. The other pluses were my General Class Commercial Radiotelephone license, and my General ham ticket, which 'networked' me in the door. (Helps when your prospective employer is a ham also).

Call some of your contracting agencies and see who their clients are and if you can fill any spots. This a good way to get your foot in the door, and gives both you and your employer a 'try before you buy' period. Good luck.

Hello all-

I am interested in making some "VR" glasses except instead of using small computer screens or whatever they are, I would like to use the small screen that is looked into when you use a camcorder. Does anybody have any idea where I could obtain these? I would appreciate addresses, phone#'s, and, prices. Thanx in advance.

:(No problem writing and receiving at the same time.)

:AL N1AL

I, too am a rightie who learned to send right- as well as
left-handed. I recommend it, mostly because you can adapt to
more sending positions, such as awkward FD milk crate tables.
Also, you will find that you can switch hands pretty quickly to
handle the inevitable insect itch.

The key (pardon the pun) is to change the paddle configuration
for the correct hand. Make the dits always on the thumb.
Apparently, the brain deals with "thumb=dits and index=dahs" much
better than "left finger=dits and right finger=dahs". Go figure.

If you want to try opposite hand sending for a while without
rewiring your paddles (for those who lack programmable paddle
orientation), simply turn the paddles backward and drape your
left hand over the top of the box (in the case of MFJ). Your
thumb and index finger will line up with the dit and dah paddles
correctly. BTW, this technique works pretty well when you need
to change sending hands quickly.

Like Al, I've failed miserably trying to write something while
sending something else. I guess that's the next exercise to try.
But then I've never been able to talk and send at the same time,
either.

I should probably get rid of my gum while sending, too.

Regards,

123. RF Feedback into Microphone.

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-06 06:39:55 UTC
From: cschmidt@diralect.me.pvamu.edu
Message-ID: <2vdjjr$l9u@news.tamu.edu>
Source record: 264172

Hey Guys, you all know alot about RF and Radio stuff. I am kinda
new at this but I have learned a few things. However I don't know how to
make RF filters.

I have an RCI 2950 transciever with a Texas Star DX 667V amplifier
and a truck stop Special antenna(1/2 wave Base Loaded with about 3.5 ft whip
on Magnet-Mount base. Any how I have a problem When I am talking on either
AM or SSB. When keyed up, If I touch the mike to my face or mouth while
talking it squeals. On AM it it is not so bad, but on SSB it is fine till
I start talking and then it stays keyed all the way up and squeals. I have
tried and tried to adjust the mike gain to where it will not squeal, but it
doesn't help it.

I was wondering if What I need was to somehow rig up a RF filter at
the Mike Element to keep it from doing this. It is the stock mike. I put
a ceramic capactor across the element and it helped it on AM but made
it worse on SSB. I am Totally Frustrated. It does not squeal when
I run the RAdio without the amp on. It seems I have heard before that
those Metal mike elements can act like a capacitor or a conducter for RF.
But I don't know for sure.

Any help would be very apreciated. I miss talking DX and local
without the squeal. Please help me if you can. I check this rec. at
least once a day... Well, thanx in advance.

Okay, sorry I didn't cancel my post soon enough. After posting it I read and re-read to the point I wasn't really sure what the intention was. It looked to me like the process had to occur before the expiration of the license in order for the operator to maintain operating privileges.

I don't ever mean to lead anyone astray. And since you mention this was hashed out a year ago (before I got on-line) I imagine someone in that thread came up with the correct information. And I will gladly take your word for it.

It seems that clarification is in order though. Or at least elaboration of the rule.

Cheers!

I'm in the midst of upgrading to Logic 4 from Logic 3 right now. So far it looks like a Windowized version of Logic 3. I'll have to try using it a while before I can pass judgement. My main reason for wanting to upgrade to the Windows version was to allow me to use my computer for other things while running Logic. I was kind of hoping for a more Windows like interface, but the Logic 4 interface will be comfortable for anyone that has used Logic 3.

As I learn more about it, I'll report back here.

[...]
: Although I am living in Massachusetts right now (and wishing I could hit the
: ZIA from here...hi hi) I lived in Alamogordo, NM for three years and left
: a year ago. Retired from the Air Force don't ya know.... :)

: Anyhoo, El Paso's entrance into the link was on 145.33. No tone required.
: From Alamogordo you could hit Caballo Peak or Benson Ridge. Their freqs are
: 145.10 and 145.23 respectively. 162.2 Hz tone if I recall correctly.
: Tell everyone I say hi when you get onto the ZIA. Thanks.

Unluckily, I'm about 750 miles from my map at the moment, but I can fill
in a couple: Two repeaters in the system, White Tanks Mountains (just west
of Phoenix, and covers into CA) and Green's Peak (in AZ, near the NM border
about 60 miles south of I-40) are both on 146.70 with an offset of -600 KHz.
All repeaters permenantly in the system except El Paso require 162.2 CTCSS
(often referred to as "PL", but that's a Motorola Trademark).

Source record: 264100

I have used a loop for 80m, till water got in the box, will waterproof
again and get back with it. It works fine.
Some others have used them on th HF bands with good results, one G-station
maintaining a daily sched with VK with 60W PEP.
They work remarkably well, they are not a gimmick.
CAPACITORS .... split stators are preferred as they eliminate the resistance
of the rotor contact. I use a vacuum only because I'm useless at mechanicals
although an ugly one would probably work every bit as well.
Some guys have made up capacitors from thin copper sheet or double-sided
PCB and threaded brass rods and good soldered joints everywhere.
The first one I made was 4 feet diameter 3/8 inch tube and an ordinary
variable, with 7 Watts I was able to hit all of Europe on 40m.
I was impressed when I saw the first commercial units by Tony Johnston
G4OGP, this was in an almost fully enclosed metal exhibition hall in Leicester,
everyone else was saying they couldn't test rigs in the hall, Tony was working
Spain on 40m getting 57 report back and giving a good 59 back.
I would say to any doubters what was said to me the day before I built
mine, it's dirt cheap, easy to build and a lot of fun.

>
John,
I ordered the new plates a few months ago and just checked with DMV last
week on the status. They are still waiting for official approval for the
new design and are not issuing new plates. The person I talked to did not when
the approval would be. If you want to order the new plates here is what I did:
sent a letter requesting the new ham plates along with a photo copy
of my ham license, a photo copy of my car's registration, and $18.00 to

Ellen Catalano, Supervisor
Special Registration Section
NYS Department of Motor Vehicles
Empire State Plaza
Albany, NY 12228

If you want to call the phone number is 518 474 6841.

For those who already have the old design, these new plates are NOT OPTIONAL.
When the new plates are ready, present holders will be sent notices indicationg
the availability and what to do to obtain them. Then the plates will be mailed
upon receipt of the necessary items.

I got my information from "The Intermod" (Rochester Radion Repeater Association's
monthly newsletter and the Special Registration Section of the DMV.

Good Luck

Tom Jennings, kv2x

>Now if the USA would only get with the program and go metric.

yeah, but we need to do away with the rules that say if you have a road sign for 55 MPH that you will be allowed to round up or round down to the nearest 5 kph boundary instead of having to post signs that read 88 kph. (fallout from the 1970's national speed limit laws, i was told).

it will never catch on as long as we have to do limts 88 and not 85 or 90.

and i recall the same rules apply to other speed limits as well so you have to drive at "complex" speed limits in mind rather than round numbers.

the other big conversion time would have been during the initial run up of gas prices when gas stations went to liter measurement in order to get a set of units that would work for $1/gal pricing on computers not able to process such large sums. Just would have had to say "no price limits on gas sold by the liter" and the industry would have changed in a heartbeat.

as it is, everyone has electronic pumps now that can probably handle pricing in the hundreds of dollars/gallon pricing range so we'll never have that chance again...

I guess I'm the exception! I decided to change my plates to Ham plates when I purchased my last car. I had 2m and 10m rigs mounted (rather ridgedly) under the dash. My girlfriend at the time (now my wife) lived in a neiborhood of Chicago that boardered a rather gang ridden region (as most of the city is). One night as you might predict by now, theives broke into my car and basically made a big mess of things. The only thing they were able to steal was the 2m rig. Left behind was the 10m and the Car Stereo, both badly damaged. It wasn't such a big job to repair the radio's but rather puzzling why the idiots would break into a car and not have enough brains to remove 2 screws that held the entire 10m and 2m radio's. Idiots like that I assume would not have any concept what they were stealing or what it was worth. Additionally it looked like they became frustrated trying to steal the car radio and just decided to trash the radio's if they couldn't remove them.

I suggest if you might want to poll the demographics of those who respond to your request. It might help you to know what kind of car they drive (certain cars statistically draw more attention), what kinds of neighborhoods they primarily park in, do they park outside on public streets???? I'm sure there are other questions that need to be asked.

Overall, since that single incedent I haven't had a problem, however I rarely go into questionable neighborhoods (we have moved) and I have installed a car alarm as well as having my window's tinted slightly, all to reduce my car's susseptibility to theives.

the radio antennas are a giveaway as well.

there are so many different plates in use today in florida, that the amateur plate (in standard colors with standard background) doesn't appear all that different from the normal alphabet soup plate.

of course, a standard big chevy or ford with minimum trim and a couple of antennas on it screams "cop car!" so you could be more thief-resistant that way.

i don't suspect the standard thief would think a call plate to be anything different than a vanity plate. keeping other clues hidden might be a better approach (remote mounted radios, take the radio with you, disguise antennas, etc.)

>It's pathetic that the tests don't REALLY STRESS 'GOOD' operating practices.
>Make the test technically challenging, and make sure the individual knows
>his operating procedures. CW should be a mode of operation. I'm still

<stuff deleted>

My $0.02 worth:

1) There is no "test" of CW skill. A virtual CW QSO is played. The candidate scribbles down as much as he can. S/he is then given a 10 question, multiple choice exam. Get 7/10 and you get a CSCE. I know, 'cause that's how I got my 13 wpm. (I had perfect copy for the 5 wpm, BTW, and could legitimately copy ~9-10 wpm when I took el 1B). Hardly random groups of 5 characters ...

2) There are, evidently, a lot of MDs that are willing to sign the Physician's Certification for el 1C. This observation is based on the fact that there are a *lot* of folks who seem to go from Tech to Extra in a matter of weeks. We call 'em instant Extras. Maybe, maybe not. Maybe it's the lack of a real CW test.

3) The Advanced and Extra writtens are the only ones that test any serious technical knowledge. They are also full of stuff about repeater control operation and satellite operation, privileges that hams receive at the entry-level.

Suggestions:

1) A "secret" question pool. The FAA analogy used to justify the PD ham radio question pool ignores the fact that there is no ham radio "ground school".

2) Simplify the license structure. How about:

+ Novice/Novice w/HF - an entry level with an HF option like Tech/Tech+ but without repeater control-op and just a subset of the thousands of MHz that the entry-level ham gets now and slivers of the HF bands.

+ General - like the current Advanced but with all frequencies (and repeater control-op). Kinda like the pre-"incentive"-license General.

+ Examiner - which would be the same as "General" but could examine new hams.

That would make 3 or 4 classes depending how you view the HF option on the Novice. Better than the current *six* and, IMHO, more logically organized.

3) Re-organize the question pools to include knowledge pertinent to the license class sought (instead of leaving satellite stuff until Extra, a privilege currently granted at the entry level).

Flame-proof suit on ...

Such may be true .... but .... can one forever hide everything for fear
of undesirables seeing it?

Considering the extensive number of "ham plates" in this country, I'd
draw the conclusion that "not to worry".

Yup, I've had 'em since 1959.

>it looks like the Cushcraft Ringo is the most popular product. Which
>of the 3 varieties, Ringo, Ringo Ranger or Ringo Ranger II should I
>plunk my money down for? Is the RR II that much better than the RR in
>terms of gain and bandwidth?

I have both the AR-2 Ringo and a couple of Rangers, one which I converted
to a Ranger II. The original AR-2 Ringo is good enough in my opinion,
although I'm currently using the converted Ringo II on top of a 60' tree
where it has survived for over 3 years. The conversion didn't seem to
do anything. The Ringos are good antennas if you assemble and adjust them
properly. I use Penetrox on all sleeves and connections as well as
stainless steel hardware if it doesn't already come with that.
Wrap the coax a few turns to form a coil about 6-8" across just below the
antenna. This will help choke off any feedline radiation although I don't
do this and don't seem to have problems. Do use good quality feedline,
RG-8, RG-213, or 9913 if you run long feedlines like I do.
I also have a 2 meter Isopole on top of another tree and the Ringo generally
outperforms it depending on what part of the band is used. While the
Isopole provides a good match across the band its pattern seems to be
very frequency sensitive and gain falls off a few hundred khz from center
freq.

141. Copying CW, and why it's friendlier than phone

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-06 15:41:45 UTC
From: ham@wam.umd.edu
Message-ID: <2vejbp$q6f@cville-srv.wam.umd.edu>
Source record: 264093

First of all, let me say that when I got my Novice back in 1984, I had no radio, and essentially forgot the code until 1986, when I got an HF rig and put up an antenna in the attic. I started on 40 CW, and worked a few hundred before being confident enough to take the 20 wpm exam (yup, skipped right over 13). This took three months of working from 8 p.m. to midnight. And when I did the exam, I listened in my head, and wrote down what I deemed important - passed w/100%!

The problem is that people don't think of Morse as a language, they think of it as a cipher. And in actuality, it's some of both. For instance, I was told when learning French that you know the language when you no longer have to translate from English to French, speak your words, and then translate what you've heard back from French to English to understand.

But Morse isn't really a language, per se. But it IS a way of communi-cating ideas. For instance, what is "HIHI," or the "Shave and a hair-cut" thing? You don't have to translate to English for either of those. The same with "QTH," "QSB," or "QRM," or "73." When you hear "73" zip across the airwaves, do you actually decode "7" and then "3," "OH, 73! That's what that was!" I don't think so. "73" is "73."

Eventually, if you keep up with it, you start hearing suffixes (-ier, -est, -ing) and small words like "and, but, the, on, it, is..." Then come bigger words (not conglomerations of letters, but words) like "there, then, where, went, radio, amateur...). For instance, when you read this screen, do you read

E V E N T U A L L Y EVENTUALLY I F IF Y O U YOU
K E E P KEEP U P UP....

No, you don't if you can read English well. I recently found that upon listening to W1AW code practice, 35 was OK, 30 was solid, 25 was still solid, but 20 and down I COULD NOT COPY IN MY HEAD! They were TOO slow to remember what had been said at the beginning of each word, so I would forget by the end of the word!

Apparently I'm not the only one to have this happen to them. Ever talk to someone who talks REALLY slow, and forget the beginning of the sentence by the end?

Code requires a great deal of effort compared to phone, for most people. It's held in high regard as an ART form by many. Besides, how long would it take to say

"Get off this net frequency now, you stupid moron, it's here every day"

In phone it's about 3-5 seconds. CW, maybe 30 seconds (just tried both). Being rude just ain't worth the time - besides, with 300 Hz bandwidth, you can always be notched out...

>BTW, the previously described garbage doesn't seem to appear in the
>Extra-class portions of the bands as much as it does elsewhere

Unfortunately, most of the convicted screwballs are Extras. I guess some Extras feel they get more privileges than just some extra khz. Also, the majority of U.S. net operations are in the General portions, so there is plenty of fodder for the lids.

Perhaps one of the things that disguises the lids on CW is that except for blatant cases of QRMing a station by holding the left side of the keyer paddle, you have to really listen to hear what the lid is saying. Voice comes and grabs you too readily. By the same token, it's much easier for a lid to find something to jam on voice than on CW.

I wish more states had distinctive plates. Here in Michigan they are
regular plates and I regularily get people asking me what kinda of "crazy"
license plate is that. Or worse yet, i have had people trying to PRONOUNCE
my call sign like it was a puzzle or something!!!!

Anyone know if Michigan will ever get "distinctive" Ham plates?
(or anyone care for that matter? heh...)...

I too have HAM Radio plates... but I currently have no amateur radio gear
in my car... I don't think they really make a difference, most thieves will
think they are vanity plates or something. However, my car was hit, parked
in my car port at my apartment in Novi michigan (and to think i moved to
Novi to be FARTHER from DETROIT and avoid crime... heh!)

I had an Alpine in Dash CD, stolen.. also all my CDs, hand held car phone in
the glove box, and computer tools were stolen.

Made a nice mess of the dash not to mention the shattered window..

Anyway, the moral here is to make your car less of a target I think..
I put in an alarm, and now i remove the face plate from the radio when
ever I leave the car for long periods... What really irkes me is having to
change my lifestyle because of them! So I say get the HAM plates!

>david..... N9HAM

Great call sign! I couldn't believe it at first, so i had
to look it up! sure enough!

I just obtained a copy of paKet 6.0 from a friend of mine.
He installed his without a hitch, but I am having no luck installing
mine. I am using 8088 XT machine with monochrome monitor.

Here are the events that follow when running the install program:

1. Displays read.me file
2. Displays install.doc file
3. Asks to print install.doc file
4. Asks for display setting
5. I input 1
6. Displays the next screen:

1. Full Installation of the paKet system.
2. Record your Serial Number.

7. At this point, the keyboard is dead. It will not take either
command! I might also point out that the highlighted video
that is supposed to appear on option 1 is but a quick scrolling
flash, and again keyboard is dead !!!!

What goes? Can you give me any help?

Another note:

I have tried to run paKet 6 by exploding the paKet6@.exe
file and adding the paKet.cfg file. I have modified the
paKet.cfg file to the right comm settings (1,4800,etc.)
When I run paKet 6.0, the keyboard is still dead.

Any ideas? I am so much looking forward to getting version 6.0
to run. What a super program! My friend, Bob, WA1YOF, from
whom I got the 6.0 from, has it installed on his 386 and everything
seems to be working fine, and the features I see and read about
are a great enhancement to an already great version 5.1.

What the heck am I doing wrong? Will 6.0 run on an old antique
8088?

Thanks for your help.

73/DX

BARTG * GB2ATG * NEWS * BARTG * NEWS * GB2ATG * BARTG
This is the - British Amateur Radio Teledata Group - News Broadcast Service
for all Amateurs and Short Wave Listeners interested in RTTY Amtor, Pactor
and Packet Radio.

This news is broadcast during the first full week commencing Monday each
month, to the following schedule..

Evening transmissions at 1930 GMT. on 3.584 MHz. Mark. +/- for QRM.
RTTY on Monday-AFSK, Wednesday-AFSK and Friday-FSK
Pactor-FEC on Tuesday.
Amtor-FEC on Thursday and Saturday.

Morning transmission at 1000 GMT. on 7.041 MHz. Mark. +/- for QRM.
RTTY on Sunday-AFSK.

An edited version of this bulletin is available on the Packet network as a
BARTG at GBR. file thanks to: Andy (G3ZYP) at GB7MXM.#36.GBR.EU.

It is also posted on the "INTERNET" system via the INFO-HAMS list on UCSD.EDU.
thanks to Iain (G6ARO) who is available on the "JANET" network as
Iain@HUMBER.AC.UK

News for July 1994. Bulletin No. 019.

BARTG Information.
Important notice affecting transmission times.
Commencing August 1994 transmission times for this news bulletin
will be adjusted to UK LOCAL time throughout the year.
>From Monday 1st August 1994.
Evening transmissions will be made at 20:00 hrs. UK local time.
Sunday morning transmission will be made at 10:00 hrs UK local time.

Although this news is directed towards interest on the HF bands the editor is
aware of the need for news to reach members not licensed or equipped to receive
bulletins on the HF frequencies. Making bulletins available on the VHF Packet
network is not the complete solution. I would welcome suggestions for improving
the service to benefit a wider audience. (ed).

A number of requests for broadcasts on the 145 MHz band in the North Kent area
are being served by Ken (G0PCA) during broadcast week using AFSK on
145.300 MHz. at 20:30 local time on Wednesday.

RTTY DX Activity.
14 MHz. (all times are GMT.)
ZA1MH 0530, VE7VX 0600, VK3AKH 0700, V63VA 1300, RA2FB 1330,

GD3HDL 1400, BV7WB and 5B4VX 1530,KL7XD 1600, 9K2WA 1730,
7Q7ZZ, GU/DL9YAJ and A41KD 1800, 9Q5PL 1900, IS0QDV 2200.
14 MHz. (PT) ZA1MH 0500.

QSL Information.
V63VA via OKDXA, P.O. Box 88, Wellston, OK 74881, USA.
ZA1MH via Mike Holman. P.O.Box 19, Tirana, Albania.
9Q5PL via OE7MCJ.

Contests.
The SARTG RTTY contest starts Saturday August 20 with contest periods from
0000 until 0800 and 1600 until 2400 Saturday 20th. 0800 until 1600 Sunday 21st.

Bands.
3.5 - 7 - 14 - 21 - 28 MHz. The same station may be contacted once on each
band for QSO and multiplier points.

Classes.
A. Single operator all bands.
B. Single operator single band.
C. Multi operator, single TX all bands.
D. Short Wave Listener all bands.
(note) A single operator all bands may also enter a single band of own choice.

Exchange message.
To consist of RST and QSO serial number starting with 001.

QSO points.
QSO with own country scores five (5) points.
QSO with other countries in own continent ten (10) points.
QSO with other continents fifteen (15) points.
In Australia, Canada, Japan and USA, each call district will be considered a
separate country.

Multipliers.
Each country as per the ARRL DXCC list will count as one (1) multiplier on
each band, including the first contact with Australia, Canada, Japan and USA.
In addition each call district in Australia, Canada, japan and USA will count
as one (1) multiplier on each band.

Scoring.
Sum of the QSO points times sum of multipliers = Total score.

Short Wave Listeners.
Use the same rules for scoring but based on stations and messages copied.

Awards.
To the top stations in each class, Country and District mentioned above, if
the number of QSO's is reasonable.

Logs.
All logs must be received by 10th October 1994.
The logs must contain: Band, Date/Time UTC, Callsign, Message sent and
received, Points and Multipliers. Use a separate sheet for each band and

enclose a summary sheet showing the scoring class, your call, name and address. For multi operator stations, the callsigns and or names of all operators involved.

Post your completed logs to:
SARTG contest manager, Bo Ohlsson SM4CMG, Skulsta 1258, S-710 41 Fellingsbro, Sweden.

Your comments would be very much appreciated.

Notes of interest.
There are plans to activate St. Paul Island (CY9) during the first week in July. Transportation and landing permission are arranged. The team will be those who activated KP1 and KP5 in 1992 - 1993. Bob KW2P, Randy N0TG, Murray WA4DAN, Ron AA4VK and possibly Dave W0RJU. This team always provide RTTY. Sorry but no further details available.
A recent report states that Peter (XT2BW) is now signing 9G1PW from Ghana. Although Peter provides RTTY there are no reports of data activity yet.
ZA1MH is active on all bands with RTTY, Amtor and Pactor.

Thanks this month to..
RSGB and SM4CMG.

BARTG caters for all DATA interests with information-components-kits -ready built units and software from experts. Members receive a 120 page quarterly journal devoted to data modes. Beginners guides for most data modes are available. The group sponsors HF and VHF RTTY contests, administers its own DX and members award scheme and runs an annual rally.

This copy of BARTG News is posted by Iain Kendall (G6ARO) who can be contacted via Internet e-mail at.. iain@humber.ac.uk Items for inclusion in the broadcast may also be mailed to this address, as well as any queries regarding membership or services offered by BARTG.

Copy of the news as distributed by G0ARF 940628.

147. twin diode mixer article, Ham Radio Oct, 1978

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-06 16:46:01 UTC
From: David DiCarlo <r14793@waccvm.sps.mot.com>
Message-ID: <1994Jul6.164601.8316@newsgate.sps.mot.com>
Source record: 263989

Does anyone have an archive of Ham Radio that includes the Oct. 1978 issue where Jim Dietrich WA0RDX had an article entitled "Twin-Diode Mixer" published? I have no local source (Austin, TX) and would gladly pay copying and shipping expenses.

Please email.

Thanks,
Dave DiCarlo
r14793@waccvm.sps.mot.com

Try this? QRT LID, NET HR DLY

I'm sure you thought of this didn't you Scott? Says the same thing and saves
a lot of time. Of course without the comma you'd think there was a LID net
going on daily. he hehe. Yeah, imagine that, a LID net. Now, how would a
LID tell a good operator to get off the freq? He wouldn't. He'd just key
over him like he wasn't there and call CQ all day without signing his callsign.
He he hehe.

Cheers!

>Good information. Wouldn't you like to write something for an
>FAW/frequent posting on the subject? I'm sure Eugene would add it
>to the collection if you email it to him.

I think before I or anyone else should submit something for an
FAQ, a little broader concensus might be a good idea. I am but one person,
and I will have to say to be honest that I am *NOT* what most of the
readers of this group would call a real backcountry hiker in any sense
of the phrase. Some further input from those who ARE and DO carry
radios would be extremely useful.

Hence, I have crossposted to rec.radio.amateur.misc. My goal
in doing so is NOT to create a clutter about "you gotta have a license"
since we have been all through that already, but to get perhaps a
better cross-section of hams who are hikers/backpackers/campers and
find out WHAT they carry, WHEN they carry it, etc.

If we're going to put some of this into an FAQ, we ought to try and
get it right (whatever "right" actually is :-)).

To give you an idea, there are some incredibly small 2meter
handhelds on the market these days. Downside: reduced wattage out.
There are some really dandy portable 2meter antennas that disassemble
and make a passable hiking staff!

I think perhaps also crossposting to rec.radio.cb is in order to get
some input from them, too. Might as well be reasonably inclusive.
This is also NOT an invitation to get into the "ham vs. CB" debate.

Perhaps some general guidlines/thoughts should be in order for
radio gear to be carried whilst hiking. I would think that desireable
characteristics would be:

1) lightweight

2) as physically small in size as possible to get the job done

3) antenna simple to use and somewhat ruggedized

4) minimal "tuning" of any kind required

5) reasonably battery efficient - keeps down on how much extra battery
and/or charger you might need to also carry

6) battery that can be trickle charged with a small solar panel
(I have seen these for AA NiCads - the panel is maybe 4 inches
by 4 inches at the most, and the niftiest ones clip onto the
TOP of a backpack so that a set of batteries can be trickle
charging all day while you hike)

6a) speaking of commonly available NiCads, I will point something out
about the 2meter handheld that I use, the Icom IC02AT. I
have an accessory battery pack that lets you put in either
8 AA Alkalines OR 8 AA NiCads. Yes, the voltages are different.
8 Alkalines = 12 volts, which will allow you to achieve
pretty much full power. 8 NiCads = 10 volts, which gives a
bit less power output but *IS* rechargeable either IN the pack
or separately as you wish. The IC02AT (which I'm sorry to
say is either not made anymore or soon will cease being made
from what I am told) is NOT a very small rig, nor especially
lightweight as "modern" handhelds go. But IMHO, for a
rig to carry in the hiking mode, the battery flexibility
and voltage/power flexibility is hard to beat. I would think
that such flexibility would be highly desireable.

I do not know if any of the currently available CB (that's
11 meters, BTW, for those who don't know) radios have these
kind of features. I have been away from CB for quite a few
years, so I'm not as familiar with those units. My *guess*
is that for CB handhelds, Radio Shack is probably the best
place to start.

****

OK, let's see what we get. Responders, PLEASE try to limit this discussion
to the topic of "good radio gear to use while hiking in the backcountry
for emergency purposes".

UKW/TV-Arbeitskreis - Redaktion REFLEXION
Frank Helmbold, St.Gotthard-Str. 57, D-28325 Bremen
email internet: Frank_Helmbold @ hb2.maus.de

Introduction to two new useful publications from UKW/TV-Arbeitskreis
---

2nd edition of "Feeders and Harmonics"
(now bilingual in English and German)

Especially in Italy, but also in France, broadcasters are using
frequencies within VHF band I between 45 and 70 MHz as feeder links
from their studios to the main transmitter sites.

Our publication gives a detailed introduction to this sort of DX,
receivers, antennas, conditions and so on.
Then there are four listings:
- all known feeder frequencies in VHF-band I, programmes, locations,
plus observed harmonic outlets originating from shortwave transmitters
- addresses of over 130 stations
- parallel frequencies of the same programmes in the range 87 to
108 MHz, to enable comparison
as well especially for travellers:
- the same feeder frequencies, sorted by countries and provinces.
The publication consists of 32 pages, A4 format, and costs
DM 5,- (3 IRCs oder 4 US$).

"TV-MAP" - a vhf band I TV transmitter atlas

As a completion of it's "TV-LIST", the german "UKW/TV-Arbeitskreis"
now publishes "TV-MAP". This kind of atlas (28 pages in A4 format)
contains 24 maps, showing the location of all TV vision and sound
carriers of more than 1 KW power in Europe and the Middle East in the
TV-Band 48 to 100 MHz. Another map shows the location of the amateur
radio beacons in the 50 MHz-band in the same region. Furthermore,
"TV-MAP" contains two transparents which can be laid over the maps:
one transparent with a geographic coordinates grid and amateur-radio
locators and another transparent with distance circles.

This atlas is in frequency order and offers a good overview of all
frequency users in this range whose transmissions might be watched
with a TV or received with a scanner.

Furthermore it is conceived especially to facilitate quick identifi-
cation of stations that may be received in this band by Sporadic-E

propagation (from May till September). Using the distance circle transparent you can see which transmitters you are able to receive by Sporadic-E (and which not). You can determine quickly and easily the approximate distance between you and the transmitter.

For amateur radio: The TV-carriers also are very useful for estimating the propagation conditions in the 50 MHz and 70 MHz amateur bands.

Prices:
"TV-MAP": DM 10,-- (5 IRC, 6 US-$)
"TV-LIST": DM 12,50 (7 IRC, 8 US-$)
"TV-MAP" and "TV-LIST": DM 20,00 (10 IRC, 12 US-$)

All these publications are available via the following address:
UKW/TV-Arbeitskreis, c/o Hans-Jrgen Kuhlo, Im Strehling 8,
D-64342 Seeheim-Jugenheim, Germany.
Pay by international money order or transfer to postal giro account Dortmund No 201100-466 (BLZ 440 100 46), c/o H.-J. Kuhlo. No airmail delivery possible to overseas countries.

The UKW/TV-Arbeitskreis is a non-profit organization.

>this bit of info in previous qsos, but I am now responding in kind.

Art,

In many parts of Europe, the word "sock" is a slang term that refers
to the external differentiator of the male anatomy, if you get my
meaning. So when they are asking your "sock" size, they are really
referring to something else. When they ask the "color" of it, they
are asking to know if you are gay or not.

>However, in qsos with foreign amateurs, I wish to state my sock size
>metrically. Does anyone have a simple chart listing lengths in
>inches on one side and the metric equivalent on the other? Most of my
>socks range in length between 7 and 14 inches. A chart that could round
>off lengths to the nearest quarter inch would be most appreciated.

Lorena Bobbitt could help you round it off to any size you want.
Just tell her that you're a "ham".

Dave,
From past expierence w/FRG9600, as far as I know there is no mod for
scan rate UNFORTUNATELY! I had one and tried in vain to get the bugger
to scan faster. In the process, I nearly mis-aligned the receiver...be
careful if you have a golden screwdriver. On the HF mod, I wish I
found this out 6 months ago...I sold the FRG9600!
Good Luck...

> ^
>>
>There is a typo in the second formula. It should read:
>
> (C - 40) = (5 / 9)*(F + 40)

Forgive my pedantry, kids, but:

(C-40) = (5/9)(F+40)
(C-40) = (.56)(98.6+40) = .56(138.6) = 77
C-40 = 77
C-40+40 = 77+40
C = 117!

By this formula, water freezes at 80 C...

(C-40) = (5/9)(32+40) = .56(72) = 40
C-40+40 = 40+40
C=80

...and boils at 180 C.

(C-40) = (5/9)(212+40) = .56(252) = 140
C-40+40 = 140+40
C=180

Who says we need a longer school year?

Actually a better way is to shoot the S.O.B.'s so they never break into a car again. And remember folks... when people are on your property that don't belong there (ie, thieves) shoot to kill not to maim because they can sue you if you maim them. :)

Try installing the capacitor .01 uF, or so, across the mic circuit AT THE PLUG END. The mic cable is acting as an antenna and conducting RF energy back into the radio at the mic connector. The capacitor will tend to short this energy out to the radio chassis ground.

You might also try simply clipping one of the newer "split" ferrite cores over the entire mic cord (at the connector). I believe Radio Shack sells these.

Tokyo? Bargains? Surely you're joking Mr. Adams. I was in Tokyo last Sept (when the dollar was hanging at about 102 yen) and found nothing that could not be had for a good bit less in New York.

If you're going, check out the Akhibara district, right outside the Akhibara JR station. Even if you don't buy it's a trip. The back alleys are filled with tiny electronics shops and stands -- it sort of looks like a scene from Blade Runner. I was looking for a bargain on a Sony SW77 and never found it. I did however, get a Sony AN-101 active antenna for about US $90 which I think is no more than I would have paid in the US. Lot's of fun looking and quite a few Japan-only products that haven't made it to the US yet.

I don't know about Singapore (wish I did!) but Hong Kong is definitely worth checking out. Prices in Kowloon seemed to be about 20% to 30% lower than the US for consumer electronics. Be careful about warrantys -- some manufacturers (read Sony) don't honor non-US warrantys. At least our local Sony service center can get quite nasty about it. I actually watched them tell a Korean gentlemen that was clearly stationed in the US on assignment that his radio was grey-market and wouldn't touch it. I don't know if he ever got it fixed.

The lesson to be learned from this is: document your renewal application. A photocopy of the 610, and having proof of mailing, perhaps by sending it certified, or registered, would be cheap insurance.
I've heard the ARRL is sending reminders to ARRL members that their license is about to expire. Does anyone know if they're suggesting this procedure?

A little off the thread, but I can't think of a better group of people to trust my life to...

I'm likely going to be moving to Philadelphia for a year of grad school starting in September. I'm 42, married with two teenagers, and leaving them all behind for the year. I'd like to find a decent efficiency, 1-br., or other suitable arrangment for the year. The closer/more convenient to Drexel University, the better.

Anyone in the Philadelphia area with comments/suggestions? Obviously the ability to set up a small hf station would be nice, but not absolutely necessary!

Dave,
From past expierence w/FRG9600, as far as I know there is no mod for
scan rate UNFORTUNATELY! I had one and tried in vain to get the bugger
to scan faster. In the process, I nearly mis-aligned the receiver...be
careful if you have a golden screwdriver. On the HF mod, I wish I
found this out 6 months ago...I sold the FRG9600!
Good Luck...

Source record: 264082

On 03.10.94 starts the EUROMIR-94 mission. During thirty days, an astronaut of ESA (European Space Agency) will work in the Mir station.

I have unluckily being just nominated as backup, and the prime will be Ulf Merbold.

We have been having lessons on radio-amateur practiceand will soon be part of your group, probably with codes ending in MIR.

The equipment on board the MIR station, and specially the adaptor for packet communications, looks really "amateur". I would be very grateful if somebody could answer these questions:

Can one purchase commertial high-performance equipment for this purpose? If so, where to look for them?

Can one use standard modems with the right software?

What Internet-like address one has to use to communicate with a radio amateur through the packet link?

I would be willing to request from ESA the purchase of anything that would improve computer communications with Mir for our mission and the future ones.

Please answer, and be so kind to do it directly to my Internet-like address...my computer link in Star City is not so fast as to allow me to read Netnews every day.

My address is : PDUQUE@ESOC.BITNET

Is the 73 a "Best regards?"

: ... I was able to get a 2000V
: 4MHz electric field on a wire, by using an old tube kw linear. I used a
: 50-to-12 ohm balun, plus a homemade 12-ohm non-inductive resistor and
: air-tuning coil, and was able to get the electric field across a 100pF load,
: with under 250W from the amplifier.

If it's high RF voltage you want, why not just rip out the output tuning pi-network and couple directly into the plate? (Through the coupling capacitor of course.) Add a large-value, high-power resistor in parallel to soak up the watts. You may want to leave in the pi-network tuning capacitor to tune the plate choke inductance to 1.0 MHz. That arrangement would give you a low-Q, high-voltage output, which is what you are looking for.

If you need to drive a capacitive load, you can add a suitable shunt inductor to get proper tuning.

>to pick out single characters (It seems sort of slow now). Snip...

I have been learning code on a morse code program I ftp'd from the net and find it more interesting than code tapes. I can vary the speed of each character as well as the tempo (words per minute) seperately. There are cassettes that do this also, but with the program you have more flexibility (and ways to do it wrong I suppose). What I have done is to set the character speed to 13 WPM and slowly worked my way up in tempo. I'm now at 11 WPM clean copy on paper, 12 WPM a little rough, and 13 WPM still shakey. I'm progressing well though, and should have it soon. Daily practice is the key though in my mind.

Well, anyway the real reason I responded to Warren was this: In playing around with the software, I tried it out at various speeds(tempos) to see how much I could recognize. At 20 WPM I could still catch a lot of letters in my head. At 50 WPM! however, everything sounded almost the same; almost like short tone bursts. I'm not sure yet if it is a limitation on the computers part to produce clean transitions at this rate or if my brain is just not primed to comprehend the patterns at this speed yet. Any opinions?

I've got my call sign on the license plate of my car and I like it. I've had other Hams call me after seeing my call sign, and I've done the same to those that I've seen. As far as advertising for theives, I've had people try to break into my car when all I had was a bag of tapes (they'ed be disappointed), and a radar detector. Most people ask me what my tag means, some have even thought it meant <Key for it all>(!?), so not everyone knows about amateur radio and its call signs. I would think most theives would look in a window to see what was in a car before they would look at the tag and say <This guys a ham. Let's rip him off>.

I'd rather shoot the damn alarm. Those pups ring all day long in the
various parking lots around campus. Try teaching a class with a
whoop-whoop at 90 dB just outside the building. At the point I
call the parking office and complain - they send out a tow truck
within minutes and tow the noisy car to the impound lot. $75.

Our city council passed a law to limit the length of time those
irritants can ring.

Advice to owners with alarms: Don't set the alarm so that a gust of
wind activates your noise-maker.

Don't listen to 2m while traveling through NYC metro much, do you? :-)

I must concur that when "coded" consistently, CW QSOs can be very concise
and friendly. Unfortunately, the Elmers (Elmer? What's an Elmer?)
don't seem to be passing along the time-honored abbreviations and the
Q code has migrated to FM. Or is it that the new breed of operator doesn't
LISTEN and makes up a new CW language as he goes along? I can't tell you
how many times I've sent things like TU FER CALL UR 5NN HR IN NJ K
and the response was "..--.." or worse, "Thank you for returning my CQ.
My QTH here is in North Weedleheimer and the weather is cloudy and my name is
Schlemozzle." And of course the code was

DAAAAAH DIT DIT DIT DIT DIT DAAAAAAH...

(I KNOW it takes a while for a fist to develop; mine did, and I'm still not
where I want to be. But, c'mon...)

Having been the new guy on the air, I try to be patient and introduce these
folks to shorthand, but it's frustrating. I don't see near as many newbies
getting the personal attention in code I did when I first started. :-(
(One such guide was N2XJ, who taught me how to get "a dozen decent dits"
out of my bug; you've no idea how that helped my straight key fist.)

I recommend that you contact Henry Radio: 1-310-820-1234
in L.A. They make custom amps available for plasma and RF
sputtering as well as for communications. Their stuff is
very rugged, and they may be able to fit up some modular
coils to meet your frequency and/or Q needs. I have owned
several amplifiers made by Henry Radio and was always quite
satisfied with their performance.

<Shameless plug for Amateur Radio!>

Given your technical background, you would be a valuable
asset to Amateur Radio...look into the new no-code Tech
License, it's easy and a fast way to get started. 73!

|> > (C - 40) = (5 / 9)*(F + 40)
|>
|> Forgive my pedantry, kids, but:

If you would kindly address your attention to the posts that followed this one, you will see the formula was finally corrected to what it was meant to be in the first place:

(C + 40) = (5/9) * (F + 40)

You will notice that -40F = -40C, which is the guiding principle in the simplicity of this formula. You add the same constant to either temperature, multiply the result by 5/9 or 9/5, depending on the conversion, and then subtract the original constant. PRESTO!!

(The proof is left as an exercise for the student.)

At the W6YL field day site (2A East Bay), most of the Bay Area (San Francisco, East Bay, Santa Clara Valley) are either off the side or the back of the beams. Very weak copy when you can get full quieting on an 2m HT with a halfwave.

Last year we worked an East African (have to go look at the old logs to find his call) on 20 meter SSB. He said we had an S-9 signal, and he couldn't hear *any* other Field Day stations! So he decided to work us.

It is also the very reason that amateurs are *required* to pass an
examination on theory and regulations. There is absolutely nothing that
is illegal about a piece of ham gear that tunes beyond the band edges,
especially if MARS operation is contempleted, *except* for linear
power amplifiers which cover the 27 MHz band and are specifically
restricted by FCC regulation. It is up to the licensed ham to *make sure*,
BY WHATEVER MEANS ARE NECESSARY, that he is operating "in-band" and ONLY
"in-band." The burden of proof is on him/her, NOT the manufacturer.

Besides, any ham can build a transmitter which can easily operate
out of band; there's nothing illegal about him building it, but
operating it is another matter.

There is nothing wrong with a nice simple address such as you propose, except that the mail systems at Rockwell will never ever be able to get it working.

Believe me, Rockwell has bounced more valid mail from the ham radio digests and other mailing lists than all the other subscribed sites put together - with the possible exception of UB.COM, which is at least a close second.

I'd be happy to be proven wrong.

If it gets there at all in Rockwell, just be thankful.

If I were you I'd nip up to the top of the tower and have a look at
the antenna. If all seems to be in order, put a dummy load on the
end of the coax up the tower and check again. If the problem is
still there its a bad run of cable. If not, look for a problem with
one of the traps on the driven element.

Good idea. When I wrote the snake bite posting I got lots of good
ideas and suggestions from other netters.

> If we're going to put some of this into an FAQ, we ought to try and
>get it right (whatever "right" actually is :-)).

Agreed.

[Duane suggests criteria:]

>1) lightweight

Yup!

>2) as physically small in size as possible to get the job done

Likewise.

>3) antenna simple to use and somewhat ruggedized

Agreed.

>4) minimal "tuning" of any kind required

Or at least simple enough for the operator to use under adverse
conditions. This varies from person to person.

>5) reasonably battery efficient - keeps down on how much extra battery
> and/or charger you might need to also carry

Good.

>6) battery that can be trickle charged with a small solar panel

Probably not necessary if the radio is only for emergency use or
even on most trips where it is used with some regularity. I suspect
1-2 extra sets of batteries would be less weight and trouble than
a solar charger.

I also want to add a bit about the idea of being prepared and
avoiding trouble instead of depending on the radio to get you out of

trouble. I hope it is obvious that people can do both and I would certainly advise people to take no risks with a radio available they would not take without one. I think this is just common sense.

I understand the concern that someone will say. "We have a radio, let's go ahead even though we wouldn't without the radio." However I suspect this seldom happens. I had a similar concern here when they started using the Mt. Hood Locator Units (radio beacons to be carried by climbers and activated if necessary). I was afraid that people would take chances and get into trouble because they had an MLU. However experience has not confirmed these fears. Although many climbers carry MLU's, and many get into trouble there has only been one case of a lost person having one. I suspect that the climbers using them are the most safety conscious and hence the least likely to get into trouble. The same thing will probably happen with those carrying radios.

I STRONGLY suggest that you go to a good book store and buy "1994 Passport
To World Band Radio" and the 1994 World Radio-TV Handbook, and ask
questions on specific models after tkaing in what those books have to
offer.

Also, you may get more focused feedback on rec.radio.shortwave

Not when I was there last year. The prices of consumer electronics were the
same or higher than US and the ham gear is old, dusty, and high priced.
Somebody's explanation was the prices were still appealing to Europeans and
Australians. Clothes and fake Rolex watches are the only bargains I saw.

It was on one of my first Field Days with a NNJ radio club.
There was a faction within the club (isn't there always?) that had a
particularly dominant Practical Joke gene. This was about the time the
'A' 2x1 calls were coming out, and there was some confusion as to what
was legit and what was not. Well, W*2*** decided this was too good to pass up,
so he became "RG8U, portable W2", with just a hint of not identifiable accent.

The real pile-ups should have been so good!

(WARNING: Do not try this at home, kids! False IDs are illegal.)

The ARRL Foundation Scholarship Committee has announced recipients
of its 1994 academic scholarship awards:

Stephen K. Gee, AA2GE, Great Neck, NY, The ARRL Scholarship to Honor
Barry Goldwater of 5000 dollar(s).

Brian T. Kuehn, KB0ETT, Emporia, KS, The Paul and Helen L. Grauer
Scholarship of 1000 dollar(s).

Michael G. Taylor, KA3SVX, Drexel Hill, PA, The You've Got A Friend
In Pennsylvania Scholarship of 1000 dollar(s).

Elliot J. Bernstein, AA2KR, New Hyde Park, NY, The Perry F. Hadlock
Memorial Scholarship of 1000 dollar(s).

Jeffrey H. Johnson, N4YRC, Cary, NC, The L. Phil and Alice J. Wicker
Scholarship of 1000 dollar(s).

James H. Muiter, N6TDC, San Mateo, CA, The Charles N. Fisher
Memorial Scholarship of 1000 dollar(s).

Amy L. Tlachac, N9TLN, Wisconsin Rapids, WI, The K2TEO Martin J.
Green Sr. Memorial Scholarship of 1000 dollar(s).

Michael R. Hawk, N0OSY, Omaha, NE, The PHD Scholarship of 500 dollar(s).

Eric N. Johnson, N9TAR, Danville, IL, The Edmond A. Metzger
Scholarship of 500 dollar(s).

John T. Crago, KB8DAN, Liberty, WV, The Edward D. Jaikins Memorial
Scholarship of 500 dollar(s).

Owen Debowy, N2WPO, Stony Brook, NY, The Dr. James L. Lawson Memorial Scholarship of 500 dollar(s).

Leanna R. Gordon, KF0ZL, Augusta, KS, The Irving W. Cook, WA0CGS Scholarship of 500 dollar(s).

The General Fund Scholarships of 1000 dollar(s) each to:

Todd A. Kramer, N4WOR, Longwood, FL
Kenneth R. Leitch, KB5OKI, El Paso, TX
James R. Phillips, KA3WSZ, Newark, DE
James W. Gregory, AD4GN, Paducah, KY
Tamara D. Britain, KB5RYE, Grand Prairie, TX

The New England FEMARA Scholarships of 600 dollar(s) each to:

Justin K. Munger, AA1AS, Pittsfield, MA
Andrew K. Freeston, KA1VYX, Windham, NH
Jason G. Lovett, N1EJD, Kennebunk, ME
Brian Montmarquet, N1NKH, Pembroke, NH
William G. Nelson, KB1AWA, Madison, NH
Michael D. Ambrose, KC1UK, Monroe, CT
Kevin T. Jensen, N1KCG, Cheshire, CT
Michael T. Decerbo, N1FYO, Trumbull, CT

To apply for 1995 scholarships, write to The ARRL Foundation, Inc, 225 Main Street, Newington, CT 06111. Deadline for applications and transcripts is February 15, 1995.

I had already tacked it on to panel 5 and Hal and I had one round discussing
it before his second hand post. I still have problems with it.

> I think before I or anyone else should submit something for an
>FAQ, a little broader concensus might be a good idea. I am but one person,
>and I will have to say to be honest that I am *NOT* what most of the
>readers of this group would call a real backcountry hiker in any sense
>of the phrase. Some further input from those who ARE and DO carry
>radios would be extremely useful.

Oh, am I a real hiker? I tend to avoid radios, but ex-work occasionally
requires it. The problems I have with Hal's text as it stands involve
the philosophical problem of carrying that kind of technology into the woods.
We ignore the obvious case of professionals doing their duty (when this was
last covered). The fact is that some organizations who lead trips forbid
the use of some of this technology. (Period.) The problem of "false
sense of security" is another area not addressed by Hal's text; this has been
known for decades as the bodies of 9 Russian women who had a radio can attest
with their last words: "We die now." So a radio is not a panacea.
Leaving the text as it is represents a tacit assumption that this is
generally condoned in the woods: and in large part, it is not.
The question is how to achieve the right sense of balance which Hal's text
lacks. In case the reader (more radio oriented) thinks this is a joke,
I refer to the article in Backpacker "Galen Rowell [a noted climber and
photographer] Almost Killed Me" and Rowell's side bar response. I doubt
Hal would like a similar "Hal (or me or any rec.radio poster name)
Almost Killed Me" net.post. It's not clear to me that consensus is what
you want. You want expertise.

Other work calls.

ES> of june with no sign of a renewal.... when should I panic?
ES>
ES> --- eric (hopefully still ka1eec)

I wouldn't worry about it... Probably technically, you're not supposed to
transmit until you get the new license in your hands, but who's gonna know?
And who's gonna enforce it? But with only 90 days having passed, I wouldn't
worry about the form being lost or anything like that. As I'm sure you've
heard all around, the FCC isn't cranking them out too fast these days!

As much as I relocate, I don't think I'll ever have to worry about renewing,
since that's covered each time I change my address... :)

>hear drift in commercial signals because they transmit double-sideband
>AM. Hams usually use cw or SSB where you must carefully beat an inserted
>carrier against the received signal to detect it. Any drift will will
>result in a marked changed of pitch.

Oh ok. This explains why the commercial signals are clear. I think this
receiver is *supposed* to receive SSB, as each freq appears twice on
the display, the second time with a small 's' showing. However, maybe
the small whip antenna is not good enough to allow the SSB circuitry
to work properly?

Actually tonight for a while, I was picking up some clear signals on
3.88 MHZ. Is this a weekly 'show' or get get-together? .. Perhaps
with the host transmitting with 1 kwatt? I did hear a couple of call
signs, W8----- something. I wonder if the propagation conditions happened
to be just right at the time.

Anyway, I guess the rainy weather the last few nights has not been the best for radio. When I did finally hear a few minutes of strong signals, it increased my level of interest in HAM radio ! The previous two nights I was not able to hear much of anything. And when I visited a HAM store here last week, I was'nt impressed with the signals I heard as the salesman demonstrated a base station hooked up to a 'proper' tower antenna. Granted it was during the day. He did finally pick up a fairly strong signal (I thought anyway ;)) which turned out to be coming from Barcelona.

>If this is too technical, just remember that hams use much narrower band
>signals which can dridt easier.

No, actually it's just about technical enough right now ;) ... I've been doing some reading, The ARRL Handbook, among others, and I have read a bit about SSB. I was looking through the handbook under 'distortion' to try to find the explanation of the pitch shifting. I thought maybe what I was hearing was inter modulation distortion. Is it?

I tried to improve the antenna by attaching about 10 feet of wire to the whip antenna. That didn't seem to make much difference. However attaching a wire to the antenna and a water pipe *did* increase the signal strength.

Anyway, I *will* keep listening :)

Mike

Oh, dear god.. That actually happened to me! When I was studying the code, I began hearing it everywhere... Even if the room was totally silent! It was probably all in my head, but it drove me nuts.. And the code never really said anything, it was just random. Maybe it was a sign of how frustrated I got sometimes when trying to study the code.

The following is a QST

The FCC proposes automatic operation for high frequency digital operations and more on the alleged California VE licensing scam. Learn what it used to cost to buy a license in La La land on Newsline Report number 881 coming your way right now!

(*****
FCC PROPOSES AUTOMATIC CONTROL FOR HF DIGITAL COMS.

The FCC has proposed amending the Amateur Service rules to authorize automatic control of stations transmitting a digital signal on the High Frequency bands. The action had been requested in petitions filed by the ARRL and the American Digital Radio Society.
In its release, the FCC has proposed to authorize automatic control for stations transmitting data and RTTY in specific subbands of each High Frequency band where such emissions are authorized. It also proposed to authorize communication between a locally or remotely controlled station and an automatically controlled station on any frequency where data and RTTY emission types are otherwise authorized.
The FCC says that it is gratified by the cooperation and dedication of the two amateur organizations in determining the conditions necessary to allow automatic control of stations transmitting data and RTTY on the HF bands. It agrees with the two petitioners that automatic control of amateur stations in the HF bands can, with safeguards, make the transmission of data and RTTY emission types both practical and effective.
The notice of proposed rule making is designated Personal Radio Docket 94-59.

(*****
HOW THE VE SCAM WORKED

More information has come to light on the activities of up to three dozen suspect volunteer examiners thought California. This is the same group of VE's that we have been reporting on since late last year. The bunch that is under government investigation for possible fraud in the testing of candidates for amateur radio licenses and upgrades. Enough information has now surfaced so

that Newsline has been able to reconstruct the way in which the scam may have been operated.

To begin with, this is an overly simplified version of what most likely took place. We preface it by saying there is a lot more paperwork at a ham radio testing session then we are going to talk about, but the FCC does not see every bit of it.

As far as the FCC and Volunteer Examination Coordinators are concerned, there are actually three key documents of concern up the license processing chain. These are the completed Form 610's that bear the signature of the volunteer examiners to certify an individual passed an examination There is a document signed by the Volunteer Examiners to certify that they are charging applicants only for expenses at the prescribed government reimbursement rate. Finally, there is a manifest listing those who attended a session and weather they passed or failed. If our guess is correct, it was by manipulating these documents that fraudulent licensing was possible.

As reported last week, the FCC suspects that allegedly corrupt VE's would either create a non existent test session or hold a legitimate one where additional people who never attended were added to the test manifest at a later date. In either case, it also appears as if names were also added of people who supposedly failed the examination. This, to keep a reasonable looking pass to failure rate.

By way of example. Suppose a legitimate session had ten people who were actually tested. The VE's suspected of wrong doing might then add on another twenty, thirty or even fifty names in the same pass to failure ratio, complete with all necessary paperwork. This material would then be sent to the VEC and then onto the FCC.

Obviously the VEC and the FCC would have had no way of knowing that about the add-ons since only those with passing grades needed to have Form 610 applications. Those who paid the asking price but didn't attend the exam sessions were in fact buying completed paperwork from which they were issued legitimate FCC ham radio licenses.

And those names added on as failures to make the numbers come out right? Most likely they were taken from a nearby telephone book with the allegedly corrupt VE's making out the answer sheets in their name. These were probably people who never even knew that their names were being used in the commission of a federal crime until interviewed by government investigators.

(*****

LICENSE PRICES IN LA-LA LAND

What was the cost of getting a ham license this way? If you believe the talk on some Los Angeles repeaters, the word is that a Novice or No-Code Technician went for $250, a General was priced at $500 and an Advanced Class ticket at $750. And the Amateur Extra -- the grand-daddy of them all -- the Amateur Extra came

with a minimum $1000 price tag, but it would go as high as the applicant would be willing to pay.
The FCC is currently limiting its investigation to the period from the Spring of 1992 to the late winter of 1994. This is a period of about two years. Some in Los Angeles believe its been going on a lot longer. Possibly dating back to the early 1980's. If its proven that all of those being investigated were actively selling ham licenses on a weekly basis for the entire time period, and figuring just one test session a week for each V-E team, the take even then becomes astronomical. In fact, its a figure that's so mind boggling that the internal Revenue Service might even show some interest if its found that no taxes were paid on this income.
Stay tuned. Obviously this story is not over yet.

(*****
CALIFORNIA LICENSE

Also from California comes word that the FCC's Los Angeles Office recently responded to a complaint from the ARRL's Amateur Auxiliary that will probably cost an unlicensed operator some big bucks. The Amateur Auxiliary is a volunteer arm of the American Radio Relay League. It was called in to investigate after it received reports that an allegedly unlicensed amateur radio was promoting his brand of unlicensed operations on the ham bands.
The FCC says that he was using his station to broadcasting a message that citizens of California need not be licensed by the FCC because amateur radio is not interstate commerce. He was also heard issuing his own "California licenses" with call signs using an SC prefix. The SC obviously standing for Southern California. So the FCC just let him rattle on while the agency's engineers used direction-finding techniques to located his station. The government says that it will soon be issuing him a hefty Notice of Apparent Liability for his own, personally licensed, unlicensed operation. The name of the suspect is being withheld pending this punitive action by the FCC.

(*****
PETER I OPERATOR PLEADS GUILTY TO BANK FRAUD

Robert Wilber, N4GCK, of Ypsilanti, Michigan and one of the operators on last February's Dxpedition to Peter One Island 3Y0PI operation, has pleaded guilty to bank fraud and mail theft. According to a report in the Ann Arbor News, under a plea bargain agreement Wilber will receive a sentence of 24 to 37 months in federal prison. He will then be subject to three to five years of supervised probation following his release.
The paper that said Wilber took checks totaling some $113,000 from the mailbox of a University of Michigan professor and cashed them. He was photographed at an automatic teller machine and his

photo appeared in local papers on December 20th, 1993. But Wilber avoided arrest long enough to join the expedition to Peter One. He surrendered on his return, having spent all the stolen money, the newspaper said.

(*****
CB BLOWHARD

The July issue of Popular Communications magazine reports that a CBer in the Salem Oregon area has turned to broadcasting. The problem is that the broadcasting is taking place in the middle of the 27 MHz Class D, CB band.
Writing in his CB Scene column, Bill Sanders says that this latest CB bandit comes onto CB Channel 10 every Sunday evening around 7 PM local time. He offers no identification, and his transmissions consist of the operator pouring out his personal rage on all sorts of political matters. Bill says that the one way transmissions can continue for as long as 90 minutes with no time out for commercial breaks.
And late word into Newsline is that the FCC's Seattle office has now become involved in the case.

(*****
INTERFERENCE TO BREATHING MONITOR

A legally operating Texas citizens radio operator has been ordered off the air because the FCC cannot figure out what to do about his signal that's causing RFI to a neighbors infant monitor. The Dallas Office responded to a complaint that the CB radio station was believed to be a potential source of interference to an infant apnea breathing monitor. An infant apnea monitor is really nothing more than a cheepie one-way intercom operating in the 48 MHz band along with cordless telephones, childrens toy CB sets and two way wireless intercom sets.
Anyhow, it seems that the parents of the newborn relayed the fears to their physician that the neighbor's CB transmissions could desensitize the monitor so that it would fail to alarm if the baby stopped breathing. FCC investigators inspected the CB radio station to insure that no overpowered operation was present. Even though they found nothing wrong the FCC engineered unilaterally ordered the 11 meter CB station to cease operations until the agency can determine the monitor's desensitization susceptibility from its manufacturer.
At airtime its not known if the unidentified CB operator will be appealing the government order.

(*****
NEW ENFORCEMENT TOOL

The Federal Communications Commission has shown off a new vehicle equipped with two computers, a color printer, complete with a satellite receiver in the trunk. This car when driven

through cities and neighborhoods can detect unlicensed radio signals and signals that cause malicious interference.
By months end the FCC will have ten such cars, each installed with $75,000.00 worth of electronic equipment. The Commission would not say which field offices will get the first cars. The goal is to provide each Field Office with at least two of these cars.

(*****
REACT CONVENTION

REACT International's 1994 national convention is slated for July 18th to the 22nd at the Somerset New Jersey Radisson Hotel. The convention is being hosted by the Garden State Council of REACT teams.
For those of you not aware, REACT is a citizens radio group that used to operate primarily on the 27 Mhz Class D citizens band. While some CB operation is still a part of REACT, these days its members primarily uses General Mobile Radio Service frequencies to provide all sorts of public assistance. While a ham license is nor required for participation in REACT, many hams have joined the organization with some holding high ranking positions in its structure.
If you are a REACT member or interested in learning more about becoming a member, this is probably a gathering well worth attending.

(*****
NORM CHALFIN RETIRES

Our heartiest congratulations to our close friend and colleague here at Newsline, Dr. Norm Chalfin, K6PGX, on his retirement from the Jet Propulsion Lab on Tuesday June the 21st. In addition to his administering the Newsline support fund -- a fund that he created some fifteen years ago -- K6PGX has also worked closely with the folks at AMSAT to chronicle in photographs and slides much of the history of the organization and its numerous achievements.
To his family here at Newsline, he is a very special person. He showed up at a time that he was needed most, volunteered to find a way to help get support from the Amateur Radio community to keep the then Westlink Radio Network in production. He set up the support fund. He worked closely with attorney Bernard Heinz WA2BAK to walk us though our incorporation under the banner of the Holmsburg Amateur Radio Club. Norm also handled all of the paperwork when we changed our name to Newsline and even gave us use of his personal post office box in Pasadena -- an address that has become synonymous with the Newsline name.
We asked K6PGX what he plans to do now? Norm, who is a young eighty years old, says that he will stay with Newsline a bit longer -- at least until a new Support Fund Administrator can be

found. After that, who knows.
K6PGX has good health, a wonderful wife and family, and a lot
of time now, to enjoy it all.

(*****

And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463 in Pasadena,
California 91102.

I've never really thought it was difficult to tell if there were expensive equipment in the vehicle. I alwas manage to see the antenna farm on the roof long before I can read the plate.....

The only real negative I can see, is that your address is easily determined, (from the call book) and now the really bad guys can drop by your qth when you're at work and get the _really_ expensive stuff.....not that the antenna farm in the back yard wasn't a tipoff to begin with.....

'good luck

What old design? Do you mean the current Liberty plates? It seems to be
rather nasty of DMV to require these plates when all destinctive plates to
date have been optional. Oh well, I guess New York still believes in
making money the real old fashioned way, TAX IT!

: (when the dollar was hanging at about 102 yen) and found nothing that
: could not be had for a good bit less in New York.

: If you're going, check out the Akhibara district, right outside the
: Akhibara JR station.

Well - actually it is called "Akihabara" - but that's a nit.
FYI - near the end of August there will be the giant HARUMI HAM FAIR
(Tokyo's answer to Dayton). Always fun to attend. Be sure to stop
by the Tokyo Int'l Amateur Radio Association booth in the "World Corner".

As for prices ..... an American friend who works at one of the BIG 3
Japanese ham manufacturers told me once that with respect to certain
HF gear in particular, he would personally be able to buy the products
cheaper by going thru a major US mail order outfit than he could by
trying to buy the same rig using his employee discount (he works in Japan).
Apparently, the "published" prices of that particular mail order house
were what he was using for comparison.
That was enough to convince me where to shop ..... although I have
admittedly bought a lot of stuff in Japan.

Cheers

-=> Quoting Hill@rowland.org to All <=-

Hi> Ham transmitters can be very useful in molecular physics experiments.

How many are there of us that have done this?

I adapted ham equipment to build the 3rd fourier transform NMR
spectrometer. The ham equipment I bought for $300 way outperformed
specialized equipment that I borrowed that had cost $3000!

I had to improve the rise times by removing all the "key shaping"
circuits, but there was no ringing, and clicks were not a problem
since it wasn't being radiated.

Wish I could sell you the old classic linear I have now. I have a fully
continuously tunable linear with variable vacuum caps, and variable
inductor. This would flexibly tune any range. It uses a pair of
4-1000's, with a power supply of 0-10,000 volts at probably amps worth
of currant from a HD power transformer that weighs over 100 lb.
It's my little linear laboratory. But because it is grounded grid,
it doesn't do more than about 10x the power. (Keeps me legal even
though it could put out more than double or tripple legal limit.)

I parralled two 4-1000's to give me a 50 ohm input impedence without
any tuning/matching circuit.

It is in a floor rack on casters and weighs more than a strong man (myself)
can lift. So I imagine it would have to be shipped. You could probably
find something much closer that was designed for 160 meters.
Good Luck.

From: oo7@astro.as.utexas.edu
Message-ID: <2vfvt1$eam@geraldo.cc.utexas.edu>
Source record: 264001

Tom LA1BJA/JW1BJA asks:

>>What does QSL-managers in USA prefer,
>>Dollar (Greenstamp), or IRC.

>>Is one IRC to fully cover return postage ??

The airmail postage from the US to your country is $0.50, and one IRC is sufficient. IRCs are sold by managers for 50-60 cents, or they can be 'cashed' at the Post Office for (I think) a 50 cents airmail stamp.

If you include the cost of a QSL card and envelope, I suppose you could justify the cost of mailing to be 55 cents, but it would be a very mean manager who would not send you a direct airmail card in exchange for one IRC.

A dollar bill is worth twice the cost of postage, so a greedy manager would 'prefer' that only because it represents a 'profit'.

If you are requesting a card from a ham who is not a manager, it might be safer to send the $ because random hams may not want to go to the trouble of cashing the IRC at the post office.

It is becoming more popular for non-W hams to send W hams envelopes that already have a 50c US stamp on them. If you do a lot of QSLing via W stations, you could send $$ to a US ham and ask him or her to send you the appropriate number of 50c stamps in exchange. Envelopes with a 50c airmail stamp on will surely bring a reply from a manager or non-manager. Of course, you have to know when the postal rates change (since they always seem to increase, rarely decrease...).

** MROP, GROL and GMDSS exams in Cambridge MA ** Sat. July 9th 1994 **

** Last Chance before additional FCC regulatory fees are imposed **

** GROL fees to be set later **

The MIT Radio Exam Team will conduct exams for the General
Radiotelephone Operators License, the Marine Radio Operators
Permit and the Global Marine Distress and Safety Systems
Maintainer and Operator Licenses. The exams will be held at
10AM on Saturday July 9th in Cambridge MA at 77 Mass Ave
in MIT's Room 1-150.

* This will be the last opportunity to take the MROP and GMDSS licenses
exams before the imposition of an additional $35 regulatory fee.
Slow action by the FCC has delayed the effective date of the new
fee to exams received at the FCC after July 18th. On these licenses
the regulatory fee is charged at $7 per year of license term.

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat lifetime
licenses. !!!

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil.

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international
radio services. A Maritime Radio Operators Permit is required to
operate radiotelephone stations aboard ships carrying passengers
for hire and certain aviation and coast stations. Large ocean

going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment.

At a later date exams will be available for the Commercial Radio Telegraph operators licenses. Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the 20 WPM 2nd class code exam.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

207. North American VHF Directory - Now available !!

I used another approach to car-protection some years ago when I had a small convertible sportscar. If I had to park in some high-risk areas where tops were always being slit by car theives I'd always put the top down, open the glove compartment and strew maps and debris all over the seats...passing thieves would think the car had already been hit and high-tail it away in case the police had been called. Worked great, but I'm not sure how you could apply this to protecting ham gear. Maybe someone should market false crowbar-damaged radio frontends which you could install in front of your rig...hmmm?

Excuse me, I have to run to the patent office...

211. remote controlled ATV station

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 05:57:45 UTC
From: steve@media.mit.edu
Message-ID: <1994Jul7.055745.18087@news.media.mit.edu>
Source record: 264016

I am wondering if anyone on this newsgroup has operated a remotely controlled ATV station (I noticed in rec.models.rc that there is quite a bit of videocar and videoplane activity, though they were mostly using small video transmitters that need no license).

Some of the catalogs I have ordered (SUPERCIRCUITS AND PC ELECTRONICS) feature ATV transmitters that they have designed for use in radio-controlled cars or planes. I was wondering if it is necessary to have the car broadcast the user's call sign, or if the whole setup falls under the class of `remote control toy' which do not require call sign broadcast, even though it is really a remote control toy with confirmation (e.g. full duplex communication is taking place).

Also, I was wondering if anyone has tried SUPERCIRCUITS products, as they sell 3 different systems that appear suitable for my project:
1. A 915 MHz 10w linear amplifier for use with the `Rabbit' or Retocon FCC approved video link that normally does not need a license, but presumably with their 10 watt amplifier falls under a ham license. If I got this product, might I want to change the freq. slightly so as not to bother anyone who is using a 915 MHz link in their home???
2. A 439.25 MHz 2w ATV transmitter and downconverter.
3. A 1 watt 1.2 GHz FM-ATV video link.

I was wondering which of these would likely give me the best performance in an urban or indoor environment surrouned by hundreds of computers and other heavy machinery (e.g. something that could get nice clean video from the basement to the fourth floor of a typical building, without any dropouts as the transmitter and receiver are moved around).

Good point - the shohizei or "consumption" (sales) tax is 3%. However,
if you bitch and moan enough, many shops won't bother hassling with you
about it.

In Akihabara (Tokyo) - I suggest the following stores:

T-Zone (they do carry some "export" models)
Ham Geppan
Rocket

Also - be forewarned that Akihabara is famous for being a "Mecca" of sorts
for people seeking virtually any kind of electronic goodies. It is NOT
known as being the place to go for the best prices. There are other
places to go outside of Tokyo proper (if you have the time) where prices
are a bit lower. Some of the larger shops in Akihabara that sell
ham gear also have stores in other parts of the country and in the
the suburbs of metropolitan Tokyo.

Be aware that it is now extremely difficult to buy an "export" model
of VHF gear. The JAs are limited to 144-146MHz on 2M; a few years ago
a "J" mark was added to most HTs to indicate that they could NOT be
reprogrammed for 144-148MHz.

A couple of other comments:

1) HF rigs come in several power "flavors" to match license classes in Japan.
If you buy an HF rig there, make sure you get the power rating you want
(10, 25, 50, 100 watts, etc.).
Make sure that the HF rig has the ability to transmit on all bands
available in your home country (e.g. JAs get only 7000-7100 KHz).

2) No 220MHz rigs in Japan (those freqs are used for broadcast television).

3) 70cm "domestic" rigs operate only 430-440MHz (not 440-450 like in USA).
ALL 70 cm repeaters in Japan are "required" to use the mandatory
88Hz sub-audible access tone.

4) As mentioned above, 2M JA equipment is good only for 144-146MHz.
Since there are no repeaters authorized on 2M in Japan, be careful
that any rig you buy is useable in your home country.

Cheers de Sandy

I don't recognise this brand of HAM equipment...is this a KW amp
for CB rig?

> ...Any how I have a problem When I am talking on either
>AM or SSB.

Admittedly, there are a few hams around who still use AM, but this sounds
like the CB band to me.

> ... When keyed up, If I touch the mike to my face or mouth while
>talking it squeals...

Depending on how much power you are running, you might be buring your
brain (that's a serious comment)...because, depending on the power
of your (? illegal ?) amp, you may be sitting in quite a strong RF
field....based on your description.

>
> Any help would be very apreciated. I miss talking DX and local
>without the squeal. Please help me if you can. I check this rec. at
>least once a day... Well, thanx in advance.

I suggest the following:

1) if you are running an illegal CB amp, trash it.

2) if you are a legal amateur and having this problem,
don't run the amp until you can find another local ham to
help your diagnose why you are getting so much RF back into
your shack...for your health's sake.

[remainder deleted...]

This is a great thread, and I'll offer my reactions to what has been said here:

I have been licensed since 1962 when, as a nervous 14-year-old, I passed my first code exam at 5WPM in front of a much older, and rather stern, volunteer examiner. My General, Advanced and Extra were passed by sitting before the FCC, and there were no canned question-and-answer lists in those days, just the ARRL's study manuals.

I'm afraid I will have to agree that, under the present regime, the CW requirement probably does _not_ add much to the overall integrity or fraternity of the amateur ranks. Someone else in this thread suggested that the amateur service as a whole is just going to reflect the common denominator of the culture in which it exists, and I believe this is probably the real bottom line. I don't think it's any secret that our culture has gone through some real changes in the last 25 years. In the past, perhaps, when I was coming up through the ranks, going through this "rite of passage" really meant something; I think the whole ritual of going before the FCC and so on made it kind of special; it was certainly intimidating! (As some of you will recall, letter-for-letter copy was required, 1 perfect uninterrupted minute; and we had to _send_ in those days, too -- one at a time, out loud, in front of the examiner and everybody else!)

Time goes on, and things ultimately have to change and evolve in order to survive. I too have spent the vast majority of my ham career on CW by choice (I took the Extra because those juicy DX-laden frequencies down at the bottom of the bands were too good _not_ to have!), but I don't for a moment imagine that having passed 20WPM (or any other speed) has somehow made me a better ham, any more than it has made me a better person. It's just what passing that test _represented_ at the time -- and I seriously doubt whether _any_ kind of test could represent the same thing in today's world.

Comments?

73,
Bill, N6FN

As of 5 hours ago, 2130 UTC, I started learning the code.
I can now, with no trouble, recall the letters
a e i t n m
and
...-.- (the "break" if that is indeed a legit cw sign)

I'm about ready to burst wanting to learn code, when, five
months ago, after passing my test, I was convinced CW was for
old geezers who don't like to use a microphone.
As soon as I can get up to 13 WPM, I will take my General
upgrade(from Tech as I am now...without code, I should add in case
someone missed that point), and get on the HF bands somehow.
For those who don't want to learn the code, and only
have their Tech licenses just to get on the repeater, more power to them.
Whatever turns your crank. I'd love to learn the whole code, as I'm doing now,
and eventually get into packet.
However, forcing someone to learn code to get on the ham bands
will, again, as was the case, keep the amateur community more closed.
Dealers of amatuer radios today know that the 'new' tech no code license
(which is still a plain ole' Technician) brings in a lot of money,
especially the HT craze going. If the requisite is, again, to know
morse code @ 5 WPM, many would rather give it up than have to learn
morse code just to talk voice on the local 2m repeaters. I can almost
certainly say that I would have not taken my tests if I had to have learned
code. And, the other friends who are now studying to become a Tech,
they also would say "To hell with this!" if code were required.
Indeed, it is a very good practice to know code, as is the ability
to not only talk on the radio, but to _understand_ what you're doing as well.
For myself, I can only hope to keep learning more and more about my
new hobby, and exposing and integrating others into it as well.

>that route?
>

I too started learning code (teaching myself, actually) using pen and paper. (I never have been able to tolerate using a pencil. Too scratchy.) As a Novice, I dutifully wrote down everything that was being sent to me, and after I had copied it all down, I would go back through it, and draw little lines between the words, and read them back to myself. But you can do that at 5WPM. When you start trying to do it at 15WPM, or 20WPM, then it gets kinda wild.

Anyway, this brought to mind my "enlightenment experience" about copying CW...

It was about 1964, and I had just gotten my General. I was attending a meeting of the Rochester (NY) Amateur Radio Association, and the guest speaker was Mabel Rager, W2RUF. During the sixties, and for many decades before that, she was a mainstay on the NTS (National Traffic System), always 100% CW; she could (and did) copy 35-40WPM plus, on paper without error, for hours on end. But, interestingly enough, her talk that evening was about the _other_ kind of CW operation, basic ragchewing. She couldn't imagine why anyone would want to write all that stuff down, like some kind of court stenographer! Well, I was pretty awed by Mabel, and she made head-copying sound so easy and so logical, I started trying to do it. It was hard at first, but within just a week or two, I found that I was starting to accomplish it with less difficulty. And it got easier and easier the more I did it.

Thing is, it's pretty hard to hold it all in your head at 5WPM, or even 10WPM. But as you start copying faster, you start hearing whole words, not just letters. It actually starts to get like a _language_, and you find yourself hearing the sounds of _words_. Often, unfamiliar words will have to be assembled mentally out of their constituent letters, but this becomes easy, too, with practice.

The other interesting thing about this approach is that I've never "forgotten" the code, even though I've been off the air HF/CW-wise for quite a few years. I can still copy 25-30WPM in my head. I think there may be a threshold you pass when it starts to get like a real language. You wouldn't forget how to speak English if you lived in China for five or ten years, would you? Of course not.

So it seems to me that it's just a matter of learning a different way, and practicing it a lot. Maybe there are certain kinds of brains that can do it easier, but I've seen no evidence of that. (I also think there is a value to being able to take written copy well, too. Why limit yourself?)

218. A Proposed Message System

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 07:29:47 UTC
From: battin@cyclops.iucf.indiana.edu
Message-ID: <CsK7Hn.1ys@usenet.ucs.indiana.edu>
Source record: 264013

A Proposed Message System,
or,
How I Intend to Save the World with Ham Radio
L. Gene Battin, N9XAM

Observations/problems

1. The FCC has recently done what it could to assist the growth of message-handling systems by stating that relaying stations wouldn't be punished for inproper message content.

2. This leaves a percieved "bottleneck" at the originating station, who must still examine each message for legality before sending it into the system.

3. Most non-hams are probably totally unaware that the Amateur Radio Service can legally handle messages for them of a trivial, non-commercial nature.

4. Even if a non-ham does know about it, they are not likely to make any sustained effort to locate a traffic-handling ham, particularly for a trivial, non-commercial message, unless they happen to stumble across one at, say, a county fair or something.

4a. Because of the collapse of Western Civilization, the percentage of people attending county fairs is prbably decreasing with time.

5. Result: less traffic through NTS than might -potentially- occur.

A Brief History of My Next Project:

I recently bought an IBM PS/2 30-286 and a cheap 14.4kbaud modem. I am having a second, computer-dedicated phone line installed. Plan 'A' was to set up a landline BBS, just for fun.

I also recently get a 2-meter rig, and decided, since I have a computer, I'd get a TNC and fiddle around with some packet stuff. (Plan 'B'.)

Now, to some extent, plan 'A' and plan 'B' collide, so I figured I'd merge them into a new, improved plan 'C'. What I now intend to do is to set up a BBS system, but not just _any_old_ BBS system. Instead, I envision the following:

Local Joe College Student has just got an 'A' on his Chemistry mid-terms. He'd like to brag to his uncle, who lives 1000 miles away, but Joe, being a typical poor starving college student can't really afford to pay to send such a trivial message via commercial means. (Insert standard justification for handling Joe's message via Ham radio here...) So, Joe uses his school computer account to dial out to my BBS, where he is presented with a menu-driven, digitzed, lineal descendant of the ARRL numbered, prepackaged

message forms. Because my system allows him to compose an individualized message (one from column A, two from column B, etc.) from all of the pre-programmed pieces, he quickly formats his request, fills in the "To" and "From" fields, and then selects "Save and Transmit". Later that day, or the next, I perform my routine BBS maintenance, via a cleverly designed sysop interface that allows me to 1) archive all request messages, 2) review any message I care to, and then, at the push of a key, 3) connect to the local packet digipeater (or whatever), and upload all my outgoing messages safely on their way to the NTS. Note the following: I am _safe_ because the system only allows legal, non-obscene "trivial" messages. I remain legally in control of the transmission (none of this confusing "Reverse Autopatch, whose in control" stuff). If I'm paranoid, I can always veto any message, but, with a well-written message-composition "door" that really shouldn't be needed.

Results:

Joe, happy "customer" of ham radio tells all his friends. Comes finals week and I am buried under requests from kids wanting to send perfectly legal, trivial messages to their folks and friends. Since hundreds of other hams in college towns are providing similar services all across the nation, NTS is in danger of being swamped from traffic overload. In desperation, the ARRL petitions the FCC to vastly increase the spectrum of the ham bands to prevent the "imminent collapse of the airwaves", and the FCC, seeing how valuable and desired a service to the public ham radio is, grants huge extra spectrum. I go down in history as the savior of ham radio and everone lives happily ever after. Also, since all the poor freshmen who have never been away from home before can now cheaply and easily keep in touch with their folks, friends, and home-town roots, I strike yet another blow against the disintegration of the family and the collapse of Western Civilization! Pretty neat, huh?

P.S. If there are setups like this already in operation, could someone point me to some references so's I won't have to write the needed BBS doors? Tnx.

Morale:

I'm perfectly happy to save the world, but I'd rather not have to write the software to do so, unless I really gotta.

P.P.S. Note that I don't _really_ solve the problems presented in items 1 and 2 above, but solve a similar, related problem instead. This is called a "paradigm shift" and is covered in Creativity 101. I think Ham Radio _needs_ some paradigm shifts right about now. Sorry to get serious on ya.

P.P.P.S. I left out the smileys 'cause I'm not so sure which part I'm serious about. Really, although I haven't seen any system like this described (which isn't saying much since I haven't really looked real hard) I'd be somewhat surprised to find that it _hasn't_ been done. I'd really like to set something like this up, so if anyone knows if it _has_ been done, point me in the right direction. Flames will be ignored.

Subject: Anyone experienced with Cushcraft R7?
Newsgroups: rec.radio.amateur.antenna
Organization: NETCOM On-line Communication Services (408 261-4700 guest)
Summary:
Keywords:

I am in a restricted antenna house, and I am looking for suggestions on a antenna for HF. In previous lives, I have tried to use several different vertical antennas including Butternut and Hygain, only to be very disapointed.

The Cushcraft R7 has caught my eye, and I would appreciate hearing from anyone with experience with it.

I am also curious about the GAP antenna, and would appreciate any other suggestions for good performing HF antennas in a limited space and restricted envirnoment.

Thanks.

220. GB2RS News 10th July 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 09:22:50 UTC
From: dave@llondel.demon.co.uk
Message-ID: <773598170snx@llondel.demon.co.uk>
Source record: 264076
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 10th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines:-

Amateurs help summon emergency services,

Two youngsters pass the 12 words per minute Morse, and

Liverpool celebrates a distinguished scientist and former RSGB President.

Amateur radio was used just over a week ago to call out the emergency services to a serious lorry accident. On the evening of Wednesday the 29th Nigel Harrison, GM6XAC, was mobile on the A68, near Oxton in the Borders when he witnessed a tanker overturning and spilling some of its load of Formaldehyde. He used two metres SSB to call Mike Clarke, GM6OFO, in Perth and asked him to call the Police. The Perth Police contacted the Borders emergency services who were later reported by GM6XAC/M as having arrived on the scene. Congratulations to both of these stations on their quick thinking and prompt action.

Congratulations are also due to a couple of the youngest candidates ever to pass the RSGB 12 words per minute Morse test. The two, both girls, were successful at their first attempt at the test in June.

Nine-year-old Jannelle, lives in Portadown, Northern Ireland and is the daughter of GI0UJG. She was taught by GI0PUZ, who sends GB2CW Slow Morse broadcasts on 2 metres.

Diane, who lives in Standon, Staffordshire is ten years old. Her Morse Tutor was G0SKG, who is the RSGB Liaison Officer for the West Midlands. Diane's parents are G0UUM and G0UUN.

The city of Liverpool is celebrating this week the centenary of the first public demonstration of wireless. The experiments were carried out in 1894 by Sir Oliver Lodge who was Professor of Physics at the University of Liverpool. Lodge, who became President of the Radio Society of Great Britain in 1925, developed the work of Clerk-Maxwell and Hertz to pre-date many of Marconi's tests. As part of the celebrations, the Liverpool and District Amateur Radio Society is running a special event station, GB6OL, until tomorrow.

The Radiocommunications Agency has informed the Society that Turkey is now participating in the CEPT T/R 61-01 agreement. This means that a

reciprocal licence is no longer required for UK amateurs to operate in Turkey.

Next weekend, the 16th and 17th, many special event stations will be active from lifeboat stations. This is to raise money for the Worked All Britain 25th Anniversary Lifeboat Appeal. Full details can be found in the July edition of Radio Communication. In addition to those listed in RadCom, GB0SHL will be operating from the St Helier Lifeboat Station.

The RSGB QSL Sub-Manager for the entire GI Callsign series is now Mr A Barr, GI7FFF, whose address is correct in the RSGB Call Book. He has taken over the GI Class B series from Mr J M Bruce.

The Goole 70 centimetre repeater GB3GC, became operational again on Wednesday, the 29th of June. The repeater is located in Goole, North Humberside and operates on channel RB4, which has its output on 433.1MHz and input on 434.7MHz. Further details and/or reports should go to the repeater keeper G0GLZ, whose address is correct in the RSGB Call Book.

The Isle of Anglesey 24 centimetre Television repeater GB3TM, is scheduled to become operational next Friday, the 15th of July. The repeater is located at Nebo and operates on channel RMT2R, which has its output on 1316MHz and input on 1249MHz. Further details and/or reports should go to the repeater keeper David, GW8PBX, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From the Congo, DK7PE hopes to be active as TN0CW, the callsign applied for, from tomorrow, Monday the 11th for 10 days. Operation will be on all bands, 160 to 10 metres, with split frequency, 160 metre activity, transmit on 1.827MHz to Europe from 2000 to 2100 UTC.

From Marianas Islands, JA6VZB will sign AH0T next Thursday the 14th until Sunday the 17th of July on all HF bands using CW, SSB and maybe RTTY.

From Tonga, JE1DXC hopes to be active from Tongatapu, Thursday the 14th until Thursday the 27th of July. His A35 callsign is awaited. Activity will be 10 - 40 metres, CW and SSB but with emphasis on 30 and 20 metres.

And from Egypt, OK2FUN is now active as SU1KR on all HF bands.

Now the rallies we know of for today, Sunday the 10th of July:

The VHF/UHF DX Convention, organised by the Northern Lights VHF Contest Group is being held at Reaseheath College, Nantwich, Cheshire. This new event for VHF/UHF users features specialised trade stands, computer software demonstrations and a lecture program, which includes such topics as: six metres, Yagi design, 70 centimetres EME, three centimetres and sporadic-E. Refreshments will be available.

The Horncastle Amateur Radio Electronics and Computer Fair is being held at a venue which is mid-way between Lincoln and Skegness and will be signposted on the main roads from Boston, Louth, Skegness and Lincoln. The event features trade stands, a bring and buy stall and refreshments. Talk-in will be on 2 metres, channel S22.

The Sussex Amateur Radio and Computer Fair is being held at Brighton Racecourse. Doors open at 10.30am. The event features trade stands covering amateur radio, satellite communications and computer interests, and a bring and buy stall. Refreshments will be available, as will a free shuttle to Brighton sea front.

Next the two events we know of for next Sunday the 17th of July:

The McMichael Rally and Car Boot Sale is to be held at the Haymill Youth and Community Centre, Burnham Lane, near Burnham railway station, Slough. Doors open 10.30am. The event features a car boot sale, no advanced booking is required. Talk-in will be on 2 metres, channel S22. For further details contact Neil, G0SVN or Roy on 0628 25952.

The Radio Amateur Invalid and Blind Club (RAIBC) Romsey Picnic is to be held at Broadlands, Romsey, Hampshire. All members, families, friends and supporters are welcome. The event features a junk sale, a bring and buy stall and a grand draw. Refreshments will be available and talk-in will be on 2 metres, channel S22. Any contributions for the junk sale and offers of prizes for the draw will be greatly appreciated. The callsign GB0IBC, will be aired throughout the event. For further details call John, G4COM on 0703 693017.

A date for your diary: The RSGB's Woburn Rally will take place on Sunday the 7th of August at Woburn Park, Bedfordshire. Full details and a map of the surrounding area can be found in July Radcom page 33. For further information contact Norman Miller, G3MVV, on 0277 225563.

Now for the HF contest news:

The IARU Championship Contest finishes today at 1200 UTC. This covers all HF bands, except the WARC bands, phone and CW, and contestants exchange ITU zones. The RSGB Short-Wave Listener Contest takes place at the same time. See the July edition of Radio Communication for further details for both contests.

The RSGB Low Power Field Day CW Contest takes place next Sunday the 17th of July from 0900 to 1200 and from 1300 to 1600 UTC, using frequencies in the range 3.510 to 3.560MHz and 7.010 to 7.040MHz. See April's RadCom page 80 for full details.

Next some VHF contest news:

The fourth RSGB 24GHz Summer Cumulative Contest takes place from 0900 to 2100 UTC, today Sunday the 10th. See April's RadCom page 82 for full details.

The RSGB 144MHz Low Power Contest will take place on Saturday the 23rd from 1400 to 2200UTC. It features four entry sections: single operator

fixed, single operator portable, all others and Listener.

The RSGB 432MHz Low Power Contest will take place on Sunday the 24th of July from 0800 to 1400UTC. April RadCom has further details of both of these low power events.

Special event stations active this month include:

GB800DON which will be operated by members of RAF Finningley Amateur Radio Society for Doncaster's 800 years Festival Celebration. The station is located at the Gala event at Edlington Welfare, next Saturday the 16th, from 0800 to 1800 UTC, using HF CW and SSB, plus FM and SSB on 2 metres and 70 centimetres.

GB1WSF, Washington School Festival, will be active from Monday the 18th until Friday the 22nd of July from Washington School, Spout Lane, Washington, Tyne and Wear. Operation will be on VHF, UHF, Packet and SSTV with the students taking part in the activities and demonstrations of amateur radio.

Before we go into the solar forecast, here's some news for those on packet radio. The RSGB's Propagation Studies Committee is running an experimental service on the bulletin board network with the help of G0CAS. Messages carrying the previous day's solar and geophysical data are on the TO field under SUN.

And now the solar factual data:

The period from the 27th of June to the 3rd of July has seen an M flare, the first since last February, but despite this solar activity remains very low. Sporadic E has been reported on most days on 10 and 6 metres. On the 30th of June an M2.5/1B flare together with a B7.4 and C2.4/SF occurred. It is believed to be associated with an eruptive prominence. It was accompanied with a steep rise in X-Ray flux. The sunspots meaned at 40 with the solar flux levels averaging 80 units. Geomagnetic activity has been very unsettled with periods up to sub-storm in high latitudes; the Ap indices averaged 22.5 units but peaked at 30 on the 2nd. Though this seems a lot, slowly the disturbed periods are getting quieter each rotation.

The state has been 'nil nothing to report'. The aa indices, as supplied by the British Geological Survey for the 21st to the 27th of June, gave an average for the daily index of 18 nanoTeslas. The 23rd and 24th were very quiet days, being down to 7.2 and 6.3 nanoTeslas with some periods of only 2 nanoTeslas. The X-Ray flux increased considerably over the period, and averaged A5.8 units, but on the 1st of July rose to A8.1, the highest levels since last May. The June spot count averaged RI 28.1 with the maximum of 63 on the 11th and zeros on the 1st to the 5th. The smoothed value for December 93 is 38.6 +/-5. The electron fluence levels are still well above normal.

I'll repeat the figures. Spots - 40; Flux - 80; Ap index - 22.5; X-ray flux - A5.8; Spots June RI 28.1.

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, averaged 5.9MHz and the darkness hour lows 3.4MHz. The highs are now centred about 20.00 hours, and the lows 03.00 hours.

I'll repeat the figures. Highs - 5.9MHz; lows - 3.4MHz

Now the ionospheric data for the north:

We have not received any data from Ekaterinberg this week, partly due to building work being carried out at the communications centre at Meudon. We apologise for any inconvenience.

And lastly the solar forecast:

This week, the active side of the sun will be rotating away. Solar flux levels are expected to be about the 85s, and geomagnetic activity is expected to be quieter than of late, with levels being about just unsettled. Daylight MUFs are expected to be about 21MHz, and the darkness hours about 14MHz in the south. Northern stations could be down on these levels. North/south paths are expected to be best. Sporadic E, though of less intensity, is expected to be on 10 and 6 metres particularly during daylight hours.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Zulu and G7 Sierra Lima series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Delta series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast in the 80m, 40m, 6m and 2m bands.

Hi,

I dunno but sometime back I posted some mods, computer interface,
control software, cheapo HF kludge etc. etc. for the FRG-9600 and I believe, to
this date, this is the ONLY FRG-9600 mod I have come across in my search.
Someone should have one with them somewhere. Its called FRGSC127.ZIP which is
the latest version.

73,
Daniel

>will be gone anyway - the distinctive call. In fact, if the CW requirement
>below 30 MHz goes, I would opt for 2 license classes: Novice and General.

>73 de Drew K9CW

Why don't we require potential hams to show they can speak clearly before
they can use phone? Why don't we test potential hams on their ability to
transmit & receive packet before they can do packet? Why wasn't I required
to learn to drive a truck before I got my auto driver's license?
Why must I learn CW just to TALK on the radio?

Ham Radio is a great hobby/service, but sometimes changes are due!

224. IC-745 32 memory mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 12:42:18 UTC
From: jwa@tellabs.com
Message-ID: <1994Jul7.124218.6117@tellab5.tellabs.com>
Source record: 264029

HERE'S HOW YOU CAN DOUBLE YOUR MEMORY ON YOUR IC-745

The following are excerpts from the WILLCO Electronics ICM-1024 NoFail memory installation manual for the IC-745

BEFORE YOU BEGIN
The following instructions may appear to be simple. They are, however, quite difficult to perform. If your not a qualified technician or if you don't have the proper tools or soldering
skills, you can damage your radio. If you don't think you can perform the task, you should contact a friend that is qualified.

THE IC-745 32 MEMORY MODIFICATION
The following steps may require the green and white "Components Layout Sheet" and schematic that came with your Icom IC-745. You will be soldering wires directly to component leads, therefore, you will need a high quality temperature controlled soldering iron.

The IC745 was the first transceiver equipped with the EX-314 memory module using logic circuitry that is similar to the Icom R71 receiver (the R71 has 32 memories and the
IC745 only has 16). The 16 memories are selected using a 4 bit binary rotary switch that's connected to DB0, DB1, DB2, DB3 and Y5. The 16 switch positions generate a count from 0 to F hex and is read by the microprocessor on the logic board.

The R71 receiver selects 32 memories using two 4 bit up/down counter IC's that are connected to the same data bus (5 bits from the two counters generate a count from 0 to 1F hex). On the R71 the fifth bit is connected to DB4.

The IC-745 32 memory modification requires the installation of a one switch and one diode. We recommend that you use the front panel PREAMP switch because it's close to the Matrix board (If the wires that connect to the Logic board are too long, they can radiate digital noise and interfere with the receiver). The switch will be used to select a second bank of memories by addressing the fifth bit (similar to the fifth bit in the R71 counters). The bank switch instructs the microprocessor to read new locations in the RAM memory. You can always add a rear mounted switch to control the pre-amp

PREPARATION
Disconnect the antenna and the AC or DC line power to the radio. Perform the work in a static free work space. You can also protect the radio by grounding it to a water pipe or a ground rod. If the wiring in your home or apartment is well grounded, the mounting screw on a duplex outlet is also a good ground. Connect a jumper lead to ground with a 100k resistor in series

and while doing the modifications, connect the other end of the clip lead to a metal watch band.

Remove the radio's top and bottom covers and place it up-side-down on a your work table. Remove the ribbon connectors that run from the Logic board (on the main chasis) to the Matrix board on the radio's front panel. The ribbon connectors are very delicate so be carefull when you un-plug them. Remove the four front panel mounting screws (they are located on the left and right side of the chasis.

Disconnect the existing wires that go to the PREAMP switch and reconnect them to an external or rear mounted toggle switch (the existing wires connect to a relay that switches the pre-amp in and out). Because they connect to the coil of the pre-amp relay, you don't have to worry about the wire length. The diagram below shows the memory switch connections to the Matrix board (it's located behind the radios front panel).

THE 32 MEMORY "MOD"
Connect the cathode end of a 1N914 (or equivalent) diode to J13 pin 2. Connect the anode side of the 1N914 diode to the switch. Connect the other side of the switch to
J12 pin 5 or W13 on the Matrix board.

Now that the modification is complete you can remount the front panel and re-connect ribbon connectors. Mount the top cover. Make sure that radio is clear from tools and bare wires. Connect the radio to a power source and hook up the antenna.
Turn on the radio. It should operate normally.

OPERATING INSTRUCTIONS
When you first power the radio, using the pre-amp switch, you can access a new bank of 16 memories. But first you will have to store new frequencies. Press the preamp switch and lock it in the down position.

Place the radio in the VFO mode and store your favorite "Ham" frequencies in the first memory. Store other frequencies in other memory locations. Place th radio in memory mode and rotate the memory switch. The frequencies that you stored should appear.
Press the pre-amp switch and unlock it in the up position. The old set of frequencies (that you stored before you made the "mod") should appear.

SCANNING
No matter which bank is selected, when all 32 memories are filled, the radio will scan all 32. All other functions should operate normally.

"Button up" the radio and enjoy!

225. Radios for Emergency Use

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 13:00:03 UTC
From: sbaker@umassmed.UMMED.EDU
Message-ID: <9407071300.AA03513@umassmed.UMMED.EDU>
Source record: 264022

On Wednesday Eugene Miya said:
(stuff deleted)...The fact is that some organizations who lead trips forbid
: the use of some of this technology. (Period.) The problem of "false
: sense of security" is another area not addressed by Hal's text; this has been
: known for decades as the bodies of 9 Russian women who had a radio can attest
: with their last words: "We die now." So a radio is not a panacea.
: ...

My 16 yo daughter is an avid backcountry person, two years ago when she was 14 she spent a full month hiking around the rockies in Wyoming as part of a leadership course led by the National Outdoors Leadership School (NOLS), an organization that has pioneered and developed the low impact backcountry approach (look at any book on the subject, it will almost certainly be written by NOLS). Their group was 15 kids and 3 adults, which broke down to 3 groups (5 kids 14-15 and one adult). There were two injuries, each requiring an evacuation, for one, someone hiked out to get help, the other involved a radio which NOLS considered ESSENTIAL EQUIPMENT. The only reason why we entrusted our child to the care of NOLS is their long experience and prudent precaution. Safety first, and no macho risk taking is the way to go with any potentially life threatening activity which any wilderness experience can be.

As I write this my daughter is on a month long wilderness canoe trip down the Mulchatna (sp?) River in Alaska with a group from her school. It includes 4 16-18 year olds and two adults, both are EMT's. Every member had to get certified in a "First Responder" course, and the group is taking the following RF gear: 1 VHF marine HT
two of those satellite emergency locator things that downed aircraft have to initiate a search and rescue operation.
and a GPS device.

I'm still nervous but feel that these provide some additional security, and probably wouldn't have let her go if these weren't going to be available.

I guess if some macho fool wants to risk his own neck, that's his business, but he'd better check to ensure his family would be well covered by his insurance. If he's going to do it with his family, he's a jackass if he doesn't take simple precautions to protect them and I would hate to have to look in the mirror if something did happen that I could have prevented.

>There is nothing wrong with a nice simple address such as you propose,
>except that the mail systems at Rockwell will never ever be able to get
>it working.

That's 'cause we're a communications company, Brian...8)...like the Cobbler's
Shoeless Children at times...

Heck, i've got one route out that not only needs a gateway format of address
(gateway name[destination on other side]) but about 3-4 lines of message text
to actually include the address and the delimiters for the gateway's parser
since it doesn't pay attention to the sending system's To: field...<sigh>.
Makes for a 30 page users guide that's really inscrutable and obscure...

I try to use what WA9FIZ and I are starting to call the "Energizer Bunny"
connection that just runs and runs and runs compared to the "official"
channels that seem to suffer from software bugs and executive decision making
(to have a .cr or not have a .cr..it's been both ways several times in the
last couple of months...).

bill wb9ivr%pubs%genav.mlb@ns14.cca.cr.rockwell.com

Source record: 264025

This whole discussion about if CW is a good pre-requisite
for HF priviledges is a moot point. The reason the we have the
CW requirements is because of the International Treaty
that says to operate on the HF bands you must be able
to do CW. Its not some scam the FCC came up with to keep
people off the bands. And for goodness sake the test was
not intended to test your operating ability or your
general level of common sense.

Lets all set a goal to have fun out there and to operate
in such a way to keep the bands friendly!! And if you
hear improper operating practice or technique from an
operator you are in QSO with give them some gentle
criticism. Isn't that one of the principles of Amateur
Radio.

Also if you want more people in the hobby...then for
goodness sakes go out and recruit and elmer folks into
the fold!! I didn't have anybody to elmer me in and I would
have been a much better op/ham in the beginning if I
would have had that gentle guidance from the start.

Oh well...my 2 cents.

cheers - Warren

I don't think that the CW requirement was ever intended to be a ham radio filter or barrier to entry - at one time it was (and may still be) an international agreement that amateur radio licensees demonstrate CW proficiency before being allowed to operate below 30 MHz. As has been mentioned, the code test has changed over the years. When I took the Extra the FCC still required 1 minute of error free copy which is a tougher standard than the fill in the blank test.

I always thought if we just wanted an artificial barrier to entry, the FCC should charge $50 for the license.

In my opinion, our current license structure is much more complicated than it needs to be. All we need are three license classes: Tech+ (VHF/UHF, no code requirement), Novice (Tech+ and 5WPM for limited HF SSB/CW), and General class with full HF privileges. I would grand father all General, Conditional, Advanced, and Extra into the new General class.

Why not give full CW and SSB frequencies to Generals and Advanced? They most likely won't be operating on CW anyway. The digital modes are expanding, and beginning to squeeze the .025 - .060 general band now.

Once we have vanity callsigns, one of the last advantages of being an Extra will be gone anyway - the distinctive call. In fact, if the CW requirement below 30 MHz goes, I would opt for 2 license classes: Novice and General.

> The problems I have with Hal's text as it stands involve
>the philosophical problem of carrying that kind of technology into the woods.

I see no problems with such technology as long as:

1. It is voluntary and

2. It does not intrude unduely on the experience of others. I think a good rule of thumb would be that the radio should provide no more intrusion than two members of the same party talking to one another.

Each should be free to choose how he wants to enjoy the backcountry, provided only that his choice leaves the freedom for others to also enjoy it and does not damage the area. If Joe wants to go out with only the clothes on his back and a little food that is fine but he shouldn't insist that Jim do likewise. Similarly Jim is free to take his ham radio, tent, and whatever else he can carry but not to impose his style on Joe. I hope we can keep this freedom, there are those who want to impose rules requiring GPS systems, cell phones or their successors, emergency beacons etc. I oppose that regimentation.

> The fact is that some organizations who lead trips forbid
>the use of some of this technology. (Period.)

I was unaware of that. Which organizations? I know the Mazamas actively encourages use of ham radios and has offered classes to help members get licensed.

> The problem of "false
>sense of security" is another area not addressed by Hal's text; this has been
>known for decades as the bodies of 9 Russian women who had a radio can attest
>with their last words: "We die now." So a radio is not a panacea.

But would the Russian women have lived without the radio? Were they there because they had a radio and thought it would get them out of trouble or would they have been there anyway? Agreed the radio is not a panacea and I hope nothing I have written implies otherwise.

>Leaving the text as it is represents a tacit assumption that this is
>generally condoned in the woods: and in large part, it is not.

While there may be those who object to two way radios in the woods, I reject the idea that they should impose their style on others. To each his own.

>The question is how to achieve the right sense of balance which Hal's text
>lacks. In case the reader (more radio oriented) thinks this is a joke,

Matt,

Good luck and don't be discourged w/the previous comments. Most of the
HF spectrum is free of the garbage posted. The anti-no-code attitude
is being stressed by the few elitists left that are afraid of losing 'their'
precious net frequencies to the volume of newcomers. It should happen, maybe
the frequencies won't be commandeered around the clock and people will once
again learn to share the HF resources. The HF bands could use a fresher,
courteous bunch. Sure, there will be some ill-feelings by many if the CW
requirements are eased (but technical/operational requirements increased),
that'll pass in time...

Peter, Bill,

The question pools are a major contributor to the present problems on the bands. I became licensed before the question pools and had to 'learn' the theory. The whole idea of the priviledge of the license means accepting technical and ethical responsibility (too often I hear people who don't even know how to measure SWR...). Some of the feedback I get about this has been 'if <they> needed to know theory <they> wouldn't have been able to get their license...' what am I missing here?

I agree that the classes of licenses should be cut, while increasing the technical and operational content requirements. A majority of candidates will likely agree. Those not interested in passing a technical exam shouldn't operate a transmitter anyway.

The previous volunteer examiner policy was plagued w/fraud; too many hams brought their 'buddies' in by vouching for their CW certificates (back in the days when an Advanced could administer the General exam, etc). This 'back door' approach may have led to the many lids out there now.

CW lids, they are there, but rare. Nothing a 250Hz filter can't handle!

Jeff is 100% correct. I visit Tokyo frequently and wouldnt even consider buying any gear there that could be bought here in the US. You could make a fortune selling $389 Yeasu FT530's in Japan that you bought here.

Quite often, Japanese visitors to my company make a trip to the local depato stores and buy Japanese goods to bring home! Another big hit is buying software (or softwares as foreigners tend to say) and bring that home.

A couple of years ago at field day our club president (who shall remain unnamed) was using the bow-and-arrow method of antenna line placement. He drew back mightily upon his compound bow, and let loose a beautiful shot which curved gracefully over the limb - and then pierced the hood of another ham's pickup truck.

This year I was working 20M phone and came across a QSO in which one party was saying, "Yeah, I think there's some kind of contest or something going on today..."

I've got call plates on my car - like others, I've made removal of my Kenwood 742A pretty difficult - mounted the rig in the trunk and used the remote mounting kit. Too much hassle for thieves.

An alarm is a good idea - I've been thinking about designing a silent alarm that pages me rather than using a noisemaker. If I mark the car properly and make thieves aware that there is a silent alarm, they should think twice about hitting the car...

241. Keyers and Positive/Negative keylines

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 16:53:30 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Jul7125330@mipgsun.mipg.upenn.edu>
Source record: 264037
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I was rereading an old QST article about using power MOSFETS as key line shifters. The idea is that most rigs take the key line (normally at some voltage) and bring it to ground in order to generate dits and dahs. There were four combinations:

1) positive to positive
2) positive to negative
3) negative to negative
4) negative to positive.

Numbers 1 and 3 make sense to me. If the rig draws more current than the keyer can deliver, something is required to allow the additional current to be drawn.

Why would 2 and 4 be necessary? The keyer is a different unit from the rig so why couldn't the wires be switched around so that the polarity is the exact opposite?

As a side issue, I believe most rigs have positive key lines. How common are rigs with negative key lines?

Hi people, this might sound like a silly request, but a little while ago I bought the International Callbook, in order to be able to send QSL cards direct. When I got it I realised that my idea of international (all nations) was not the same as their definition (all nations except North America - PLEASE NOTE that that is not just all nations except the USA).

I can look up U.S. (and Canadian, for some reason) callsigns using the callsign server at buffalo.edu (or something like that), and I can look up European, Asian, South American, African and Oceanian callsigns in the International Callbook.

This is very useful, and so far has served about 99% of my needs.

Could anyone tell me the addresses for the following stations?

6Y5GR
FM5GN
FG5BG
HT1T
and CO1RG

Thank you very much for any help,

73 de Scott

>well received and encouraged to join in. I notice that in the morning
>most frequencies are friendly. Go ahead and upgrade. We need you.

I second the "upgrade, we need you" sentiment. The BEST way to
get rid of the trash element (and BTW, I've heard some on 2-meter
simplex who were just as bad as anything on 75 or 40) is for *decent*
operators to (a) be active on the bands and set a good example;
(b) report flagrant violations, particularly groups of slimeys who
park on the same freq night after night (or day after day), to the
FCC (giving callsigns and locations, if known); and (3) refrain
from EVER verbally attacking or abusing a slimey over the air EVEN
WHEN HE QRMs AND CURSES YOU AND TRIES TO GOAD YOU INTO A RESPONSE.
Don't play their game; they only want attention. If you ignore
them, and flagrant groups keep getting mysteriously reported to the
FCC (thus making the pages of QST under headlines such as "Topeka
Hams Fined For Rules Violations" or "FCC Revokes Licenses of
75-meter Malicious Interferers"), eventually they'll be few and far
between.

Good always triumphs over Evil unless Good wimps out and becomes
an ostrich.....

Conway Yee (yee@mipg.upenn.edu) wrote:
: I was rereading an old QST article about using power MOSFETS as key
: line shifters. ...

There are basically two combinations in common use. Older tube-type transmitters used grid-block keying: A negative voltage biases OFF the final amplifier tube. When you close the key contacts, the negative voltage is shorted to ground, allowing the amplifier tube to conduct. Open-circuit key jack voltage typically runs minus 50 to minus 150 volts or so. Short-circuit current is a few milliamps.

Solid-state radios use a positive key voltage, again shorted to ground to enable the transmitter. Open-circuit voltage is typically around +5V to +12V. Short-circuit current is again a few milliamps.

A few of the really old tube-type transmitters used cathode keying. In that case, the open-circuit voltage can run +50 to +300V or more with closed-circuit current being equal to the final amplifier current, perhaps as much as an Amp. Make sure you have a well-insulated key if you use one of these monsters!

That's why the entire VE system should be thrown out. Witness the
current scam in L.A. We need an authoritative body to administer
the exams. After all, do we as drivers administer driving exams?
Do those who are aircraft pilots administer pilot license exams?

>CW lids, they are there, but rare. Nothing a 250Hz filter can't handle!

Very, very rare.

The fact that we see Generals, Advanced, and Extras breaking laws on
HF show that CW is not a lid-filter; in fact that shows that *anyone*
can learn CW!! But those who devote most of their on-the-air time
to CW rarely are the lawbreakers. As I've said on here for the
last couple of years I've never read in the pages of QST of a
CW op receiving a NAL from the FCC.

> (One such guide was N2XJ, who taught me how to get "a dozen decent dits"
> out of my bug; you've no idea how that helped my straight key fist.)

My cw mentor/Elmer was KQ5I, now AA4GZ. In 1981 we only lived three or four
miles from one another but 80 cw always saw "KA5MWD DE KQ5I" and response.
Then KA5MWD (me) would send, "PSE QRS QRS." And he would until and he'd
slowly creep up speed and make me sweat again. This went on at least until
I upgraded to Advanced in 1983. But in those QSOs not only did my speed go
up but so did my use of condensed text. I was an air traffic controller at
the time and that helped immensly. For the sake of expediency everything
written by hand is abbreviated. So, der u go om. Gld 2 hv met u es hpe bcnu
agn dwn log BT U wnt me send agn? Cnt cpy my cw? Im usng kybrd hr... :D

Me thinks lots of people don't want to take the time anymore to learn many
ways to operate more efficiently. Not everyone mind you. But things have to
come instantly anymore or it's not used. I won't get into it but you may
know what I mean. &-D

Take care es 73

This sounds like the old system when people had to drive hours to get
to one of the few times a year the FCC offices were willing to give a
test.

There is no need to be so statist. Sure, giving the people the power
to administer tests has its warts but it certainly a darn sight better
than the alternative.

Then there was the time...

in 1983 in Biloxi, Mississippi while operating Keesler Amateur Radio Club's K5TYP "Tiny Yellow Polka-dots" the weather started getting rough...the tiny ship was tossed...uh sorry 'bout that folks..flashbacks. &-D

Most us abandoned the site at Thrower Park, part of Keesler Air Force Base housing, where I lived. A few of us went to my house. While at home I quickly disconnected my antennas (I don't like -ae at the end) and threw the cable on the floor.

Within minutes there was a loud "POP!" and an arc flashed across from the shield to the center conductor of the PL-259 connected to the cable sitting on the floor. This was followed almost instantly by a loud roar of thunder. "Man, that was close!"

A short time later after the storm drifted eastward and out of the area, we began straggling back to the Field Day site. WA7*** stayed at the site during the storm. Being a Technician class licensee he wasn't supposed to be talking on HF when a control operator of sufficient class wasn't present. He knew that. But being so anxious to talk on HF he decided to do so whilst we was gone. Using an Icom 730 rig and with one of those small Icom gooseneck microphones WA7*** was making contacts galore.

Remember that loud POP followed by the thunder? Well ole sizzle lips WA7*** had his mouth very near the mic when that happened. Yeah, God got him for operating beyond his privileges without a proper control op present...

Hope you're reading this Mike, I'll never forget that.

|>
|> It is also the very reason that amateurs are *required* to pass an
|> examination on theory and regulations. There is absolutely nothing that
|> is illegal about a piece of ham gear that tunes beyond the band edges,

<snip>

In fact, before the "digital era", it was impossible to design such a transmitter. The only reason that modern gear does not transmit "out of band" is that the computer controlling the transmitter is programmed to prevent the transmitter from keying when the frequency is not within the desired band. The classic Swans, Hallicrafters, etc. did not have this feature and the amateur would have to engage brain and remember where the band edges were, the width of his transmitted signal, and when he last calibrated the analog dial. Frequency counters were few and far between in those days!

Some amateurs feel restricted by the band restrictions on modern, digitally controlled gear. My father has modified his IC751A for continuous coverage as it makes tuning up and down the bands much easier. He has no desire to operate out of band, and I think that after 30+ years of operation, he probably remembers where the edges are.

I have opened up the receive restriction on my IC W2A, but have left the transmit limits unmodified. My reasoning is that in the event of theft, I would not want the radio to be capable of mischief in the VHF public service allocations. It's all the hams need to have some idiot harassing the police misidentified as an amateur when he is caught. Unlike my father's situation, the tuning effort required to program the W2A does not change with the modification.

ARLD039 DX news

ZCZC AE37
QST de W1AW
DX Bulletin 39 ARLD039
From ARRL Headquarters
Newington CT July 7, 1994
To all radio amateurs

SB DX ARL ARLD039
ARLD039 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Dave, VE2ZP/VE9CB, John, WB2K, Warren, NF1J, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

NORTHERN COOK ISLANDS. Ken, ZL2HU, is planning a six week SSB operation as ZK1KH, though no date has been mentioned. He will favor 21177 and 28490 kHz. Meanwhile, Steve, AA6LF, has wrapped up his ZK1ALF stint. Plans were for him to be on from Western Samoa through July 12, but he has yet to show on local PacketCluster nodes. A July 13 to 18 stop at Tokelau and July 18 to 25 stay on Wallis are on his itinerary.

GREENLAND. Dave, WJ20, will be on the air as OX3/WJ2O July 9 through 13. He will be active on all bands as a mixed mode entry in the IARU HF Contest over the weekend. Check the WARC bands after the contest. QSL via WJ2O.

SINGAPORE. 9V1ARU of the Singapore Amateur Radio Transmitting Society will be on during the upcoming IARU contest under the HQ category, an official IARU region 3 member organization. Operators include 9V1YC, 9V1ZB and JE1JKL. This will be the very first Singapore multi-op station in an international contest.

CANADA. Four Canadian HQ stations will be on the air during the IARU HF Contest. They are VA2RAC on 20 meters, VA3RAC on 80 and 10 meters, VE4RAC on 160 and 40 meters, and either VA7RAC or VE7CFD on 15 meters. The member society abbreviation portion of their exchange will be RAC signifying Radio Amateurs of Canada.

THIS WEEKEND ON THE RADIO. The popular IARU HF Contest runs from 1200z Saturday to 1200z Sunday. Contact as many amateurs world wide, especially IARU HQ stations, on 160, 80, 40, 20, 15 and 10

meters, CW and/or SSB. The exchange is signal report and ITU zone. IARU HQ stations will send signal report and their member society abbreviation. Complete rules for this popular event appear on page 122 of April QST.

The QRP ARCI QRP Summer Homebrew Sprint, sponsored by QRP ARC International, is from 2000z to 2400z July 10. Exchange signal report, state/province/country and ARCI number, if you are an ARCI member. If not, send power output instead of ARCI number. For more information check page 118 in June QST.

The CQ World Wide VHF WPX Contest, sponsored by CQ Magazine, starts at 1800z July 9 until 2100z July 10 on all authorized bands from 50 MHz up. Exchange call sign and four digit grid square. Details are on page 118 in June QST.

Unfortunately it has been learned that,

Central Iowa Technical Society, Inc. (CITS)
in association with
High Altitude Balloon Experiments
in Technology (HABET)

has decided due to insufficient participant registrations and a sparse
submission of papers,

The National Balloon Symposium II

should be cancelled.

Hopefully, we can generate more enthusiasm in this interesting activity at
sometime in the future and schedule again. If that is the case,
announcements will probably be made here as to the sponsoring group,
location and time.

John R. Myers (jmyers@netcom.com) wrote:
: : Tokyo? Bargains? Surely you're joking Mr. Adams. I was in Tokyo last Sept
: : (when the dollar was hanging at about 102 yen) and found nothing that
: : could not be had for a good bit less in New York.

: Just a reminder that when you do your price comparisons you can subtract
: the domestic excise tax. At the larger shops you just show your passport
: and they will discount your purchase on the spot.

Good point - the shohizei or "consumption" (sales) tax is 3%. However,
if you bitch and moan enough, many shops won't bother hassling with you
about it.

In Akihabara (Tokyo) - I suggest the following stores:
T-Zone (they do carry some "export" models)
Ham Geppan
Rocket

Also - be forewarned that Akihabara is famous for being a "Mecca" of sorts
for people seeking virtually any kind of electronic goodies. It is NOT
known as being the place to go for the best prices. There are other
places to go outside of Tokyo proper (if you have the time) where prices
are a bit lower. Some of the larger shops in Akihabara that sell
ham gear also have stores in other parts of the country and in the
the suburbs of metropolitan Tokyo.

Be aware that it is now extremely difficult to buy an "export" model
of VHF gear. The JAs are limited to 144-146MHz on 2M; a few years ago
a "J" mark was added to most HTs to indicate that they could NOT be
reprogrammed for 144-148MHz.

A few other comments about buying Ham gear in Japan:

1) HF rigs come in several power "flavors" to match license classes in Japan.
If you buy an HF rig there, make sure you get the power rating you want
(10, 25, 50, 100 watts, etc.).
Make sure that the HF rig has the ability to transmit on all bands
available in your home country (e.g. JAs get only 7000-7100 KHz).

2) No 220MHz rigs in Japan (those freqs are used for broadcast television).

3) 70cm "domestic" rigs operate only 430-440MHz (not 440-450 like in USA).
ALL 70 cm repeaters in Japan are "required" to use the mandatory
88Hz sub-audible access tone.

4) As mentioned above, 2M JA equipment is good only for 144-146MHz.
Since there are no repeaters authorized on 2M in Japan, be careful
that any rig you buy is useable in your home country.

Cheers de Sandy

263. IPS Daily Report - 07 July 94

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-07 23:27:34 UTC
From: rwc@flare.syd.ips.oz.au
Message-ID: <1994Jul7.232734.14116@ips.oz.au>
Source record: 264063
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 7/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 7 JULY AND FORECAST UP TO 10 JULY

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/1N 1002UT none

Observed 10.7 cm flux/Equivalent Sunspot Number : 088/032

GOES satellite data for 6 July
Daily Proton Fluence >1 MeV: 2.7E+06
Daily Proton Fluence >10 MeV: 1.3E+04
Daily Electron Fluence >2 MeV: 1.7E+08
X-ray background: A4.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 July 09 July 10 July
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number : 088/032

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 6 July
Learmonth 13 2333 4232
Fredericksburg 15 15
Planetary 15 11

Observed Kp for 6 July: 2233 2234

2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
08 Jul 15 Unsettled.
09 Jul 13 Quiet to unsettled.

10 Jul 10 Quiet to unsettled.

2C. MAGNETIC COMMENT
Active conditions occured between 11-14UT(local night).

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
07 Jul normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Jul normal normal fair
09 Jul normal normal fair
10 Jul normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were about 10% above predicted monthly values

Observed T index for 07 July: 46

Predicted Monthly T Index for July is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
08 Jul 40 About 10% above predicted monthly values.
09 Jul 40 About 10% above predicted monthly values.
10 Jul 35 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

264. Legal question

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 00:25:22 UTC
From: slhamon@crl.com
Message-ID: <2vi6di$dl5@crl.crl.com>
Source record: 264064

Is it legal according to the FCC for a ham operator using a autopatch to dial up a digital pager and page another ham to turn on his radio by entering the radio freq. I am curious about this since I would love to take my HT to work and if my wife needed me (She's a ham too) page me on my digital pager to turn my HT on to the freq. she sends to me instead of a phone number. Thank you for taking your time to answer or even consider this posting. 73's N5OVP -Steven

265. keyer program to run under windows, Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 01:30:15 UTC
From: cjohnson@hookup.net
Message-ID: <cjohnson.4.2E1CAC27@hookup.net>
Source record: 264067

Does anyone know of a program to key a transmitter from an RS-232 port, such as CW104, that is designed to run properly under windows? It does not have to be a glossy windows only program, only one that knows about windows enough to get the timing correct.

CW104 keys my HW-8 fine, but it does not geneate proper timing when running under windows. Here is why I want a simple keyer program that runs under windows.

I work at home, self-employed, and I run under windows all day. Normally I am using it a a CAD environment, designing an integrated circuit. If I exit windows, and then restart it, it takes 10 to 15 minutes to re-run my simulations. But, while I work, I like to leave the xcvr on, and respond to CQs when I hear one that the QRP rig can reach. It would be nice to have a PC keyer available to work QSOs with hams that can copy at 15 WPM, which I can copy, but with my straight key, I can send at about 10 WPM. And, if the QRM is high, then I would prefer to send the best code I can, to maximize my signal being copied at the far end.

I am a new ham, on the air for less than 3 weeks, and so far loving every moment. VA3CSJ

Please reply via email, and I will sumarize the responses I receive.

266. Re: Contest Question

John E. Taylor III (rohvm1.mah48d@rohmhaas.com) wrote:

: By strict legality, the _station_ is licensed, as well as the operator.
: You're operating his station, therefore you sign with the station's
: callsign.

: There's a justification I've heard for using your own callsign: the owner
: of the station temporarily transfers ownership of the station to you for
: the duration of the contest, which makes it _your_ station, and you're
: entitled to use your own callsign. If anybody were to question that sort
: of thing carefully, I doubt it would hold up, but I suspect the FCC has
: better things to do (like reducing the backlog on new licenses!).

I think this is quite legal (substitute "posession" for "ownership"),
but most contests require a group to use one callsign. And, of
course, if you use someone else's callsign, you're operating under
their station license.

I think it's okay - can't think of why it might not be, as long as the phone number you send is not a code/cypher - or example, if you just sent a straight number via your keypad. Of course, the voice message to the same effect would also have to be legal - can't be for your employer, you can't have a pecuniary interest, control op present, and so on. And you have to have the permission of whoever owns the station your operating through (if it's not yours).

268. Satellites seen from Earth

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 02:28:54 UTC
From: stjacque@nbnet.nb.ca
Message-ID: <stjacque.57.0@nbnet.nb.ca>
Source record: 264071

Hi,
I'm an amateur astronomer and often see satellites moving among the stars.
I was sure that some of you HAMs would have the coordinates, times, dates of
the nightime visible satellites.
Would some of you spare some time and forward me this info?
My coordinates: long. 68*26, lat.+47*28.
I will really appreciate the info.
Thanks much.
Rachel

No problemo. If you can order the delivery of a pizza by phone patch, you can order the delivery of a message.

Who's paying for the pager calls, anyway? There are "pagers" that work on ham radios, by the way.

275. Re: A Proposed Message System

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 04:42:54 UTC
From: drenze@icaen.uiowa.edu
Message-ID: <2vilge$qqk@news.icaen.uiowa.edu>
Source record: 264074

Bravo! I've thought about a lot of paradigm shifts for
amateur radio, but never one quite like this. Me 'at's off to
you, and I'd like to learn how this goes...I may elect to do it
meself.

I'm not quite sure how to take this post. In what way would carrying a
radio while hiking not be "condoned", and by whom? And why would anyone
pay attention to such a kook?

Assuming that you're serious (I've never seen the magazine you mention),
and that what you want is emergency communications, I suggest you use a
portable cellular telephone - since you don't need any special license,
can talk directly to public safety agencies, and presently have coverage
in most of North America as well.

I would not suggest portable CB radios - mainly because none of the ones I
have seen were terribly compact or rugged, the antennas are quite large
and usually flimsy telescoping ones, and your chances of finding
assistance vary widely across the continent. The range is also quite
limited.

If you're a ham, you probably already have a portable VHF or UHF radio,
most of which are reasonably compact - maybe 1 X 2 X 6, and hams often
have repeaters which greatly extend the range of the radio, as well as
allowing, in many cases, autopatches (self dialled telephone
interconnects) to the telephone system. I do suggest that you forget about
re-charging systems while hiking. Most handhelds today have as an option a

battery pack capable of taking AA alkaline cells. My Radio Shack HTX-202, for example will run 7-8 hours on a fresh pack. Leave the rechargeable pack on the radio, and take along a spare set of alkalines and holder, as well as a roll up portable antenna to extend the range if necessary.

If you're not a ham already, you need to study the regulations, etc, as well as some elementary radio theory and pass a test before you can get an amateur radio license in either the US or Canada. It's not hard, but probably not trivial, either, and I don't suggest you do this unless you're interested in radio generally.

278. Wal-Mart 900MHz ATV transmitter?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 05:00:03 UTC
From: steve@vigra.com
Message-ID: <STEVE.94Jul7220003@susie.vigra.com>
Source record: 264072
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Wal-Mart has an interesting gizmo called a "Video Wireless VCR Multiplier" for $29.95. It's similar to the Gemini Rabbit TV transmitter/receiver pairs, but this one is still in production and stocked.

I bought one to experiment with, and it seems to have some promise for ATV work. The transmitter has two output frequencies, each with a tweak pot inside next to the selector switch. It seems to be able to put out a signal anywhere from 905 to 926 MHz with some stability. I have no idea what the (low) output power is, though, and the sparse docs don't say.

There is a new ATV repeater here on Mt. Palomar (San Diego) with a 919.25 MHz input frequency, which is well within range for this transmitter. I'm looking at a small amplifier advertised by Down East Microwave. This "DEM 3310PA" 902-928MHz 10W amplifier seems impressive for $150 (less for kits). It only needs 10mW of input drive, so I would guess that the Wal-Mart box can make it happy.

Has anyone tried a setup like this? I'm looking for any tips on where to install an antenna output jack, since the unit has only a screw-in mini telescopic now. My inclination is to just install a BNC jack connected to ground and the current antenna post. Will I have any serious problems with impedence mismatch?

This certainly seems like a cheaper way to go than commercial ham ATV transmitters. Am I missing something?

Thanks!
-Steve

domonkos@access.digex.net (Andy Domonkos) did contribute said ASCII:
>
>Good luck and don't be discourged w/the previous comments. Most of the
>HF spectrum is free of the garbage posted. The anti-no-code attitude
>is being stressed by the few elitists left that are afraid of losing 'their'
>precious net frequencies to the volume of newcomers. It should happen, maybe
>the frequencies won't be commandeered around the clock and people will once
>again learn to share the HF resources. The HF bands could use a fresher,
>courteous bunch. Sure, there will be some ill-feelings by many if the CW
>requirements are eased (but technical/operational requirements increased),
>that'll pass in time...
>

I've not become discouraged ; in fact, I want to get onto the HF
bands and chat with people who know a helluva lot more than I do.

The influx of "Tech No-Code" (like me) certainly sours the old-timers
who think that Extra Class is the ONLY class, and 20 WPM is too slow
(add a ! on the end)

I don't care if I have to learn 13 WPM for my general upgrade.
I don't care if it's 20 WPM. I'll learn it if that's what the FCC
says I gotta do. When I have a ham cop an attitude with me because
they realize I'm one of "them" without code, I will remember his/her
callsign and say "Do not talk to this person again - I don't need
someone copping an attitude with me". I've a couple in town who are
like that to *all* no-code licensees, and it's frustrating.
When I get older, and have been doing it for 20+ years, I'm sure the
FCC will have new regulations and rules, and I'll be doing MY set
of bitching and whining. In amatuer radio, the more the merrier.

Well my friend, I live in Ottawa Ontario, which has close to a million people in the surrounding area. If I drive North for 30 minutes I can go do a day hike and be out of cellular phone range for most of the day. Cellular phone coverage is for areas where people are, not the backcountry. There may be coverage in most of the U.S. but most of Canada has no coverage. There are major roads where you can drive for four hours between the spots of cellular coverage. Try using that cellular phone on any of the rivers in Canada's north. An earlier thread on the net was "is there anywhere in the continental U.S. that is more than 10 miles from a road". We have lots of places that are over 500 miles from the nearest road. THAT'S BACKCOUNTRY!!!!!

Same problem, but not as bad. VHF and UHF radios tend to be "line of sight". Try picking up that repeater as you canoe down that steep canyon.

282. Icom IC-745 32 memory mod

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 12:47:43 UTC
From: jwa@tellabs.com
Message-ID: <1994Jul8.124743.20355@tellab5.tellabs.com>
Source record: 263954

I'm not sure that this was posted, (had news server problems at this site)
so here it is again!

HERE'S HOW YOU CAN DOUBLE THE MEMORY ON YOUR IC-745

The following are excerpts from the WILLCO Electronics ICM-1024 NoFail memory
installation manual for the IC-745

BEFORE YOU BEGIN
The following instructions may appear to be simple. They are, however, quite
difficult to perform. If your not a qualified technician or if you don't
have the proper tools or soldering
skills, you can damage your radio. If you don't think you can perform the
task, you should contact a friend that is qualified.

THE IC-745 32 MEMORY MODIFICATION
The following steps may require the green and white "Components Layout Sheet"
and schematic that came with your Icom IC-745. You will be soldering wires
directly to component leads, therefore, you will need a high quality
temperature controlled soldering iron.

The IC745 was the first transceiver equipped with the EX-314 memory module
using logic circuitry that is similar to the Icom R71 receiver (the R71 has
32 memories and the
IC745 only has 16). The 16 memories are selected using a 4 bit binary rotary
switch that's connected to DB0, DB1, DB2, DB3 and Y5. The 16 switch
positions generate a count from 0 to F hex and is read by the microprocessor
on the logic board.

The R71 receiver selects 32 memories using two 4 bit up/down counter IC's
that are connected to the same data bus (5 bits from the two counters
generate a count from 0 to 1F hex). On the R71 the fifth bit is connected to
DB4.

The IC-745 32 memory modification requires the installation of a one switch
and one diode. We recommend that you use the front panel PREAMP switch
because it's close to the Matrix board (If the wires that connect to the
Logic board are too long, they can radiate digital noise and interfere with
the receiver). The switch will be used to select a second bank of memories
by addressing the fifth bit (similar to the fifth bit in the R71 counters).
The bank switch instructs the microprocessor to read new locations in the RAM
memory. You can always add a rear mounted switch to control the pre-amp

PREPARATION
Disconnect the antenna and the AC or DC line power to the radio. Perform the
work in a static free work space. You can also protect the radio by
grounding it to a water pipe or a ground rod. If the wiring in your home or

apartment is well grounded, the mounting screw on a duplex outlet is also a good ground. Connect a jumper lead to ground with a 100k resistor in series and while doing the modifications, connect the other end of the clip lead to a metal watch band.

Remove the radio's top and bottom covers and place it up-side-down on a your work table. Remove the ribbon connectors that run from the Logic board (on the main chasis) to the Matrix board on the radio's front panel. The ribbon connectors are very delicate so be carefull when you un-plug them. Remove the four front panel mounting screws (they are located on the left and right side of the chasis.

Disconnect the existing wires that go to the PREAMP switch and reconnect them to an external or rear mounted toggle switch (the existing wires connect to a relay that switches the pre-amp in and out). Because they connect to the coil of the pre-amp relay, you don't have to worry about the wire length. The diagram below shows the memory switch connections to the Matrix board (it's located behind the radios front panel).

THE 32 MEMORY "MOD"
Connect the cathode end of a 1N914 (or equivalent) diode to J13 pin 2. Connect the anode side of the 1N914 diode to the switch. Connect the other side of the switch to
J12 pin 5 or W13 on the Matrix board.

Now that the modification is complete you can remount the front panel and re-connect ribbon connectors. Mount the top cover. Make sure that radio is clear from tools and bare wires. Connect the radio to a power source and hook up the antenna.
Turn on the radio. It should operate normally.

OPERATING INSTRUCTIONS
When you first power the radio, using the pre-amp switch, you can access a new bank of 16 memories. But first you will have to store new frequencies. Press the preamp switch and lock it in the down position.

Place the radio in the VFO mode and store your favorite "Ham" frequencies in the first memory. Store other frequencies in other memory locations. Place the radio in memory mode and rotate the memory switch. The frequencies that you stored should appear.
Press the pre-amp switch and unlock it in the up position. The old set of frequencies (that you stored before you made the "mod") should appear.

SCANNING
No matter which bank is selected, when all 32 memories are filled, the radio will scan all 32. All other functions should operate normally.

"Button up" the radio and enjoy!

^^^^^^^^^^^^^^^^^^^^^^^^

You dont have to bitch and whine if you dont want to.

There is a natural generation gap between "old hams" and "new hams".

40 years ago, when I got my novice license, a few of the old timers
complained about these young kids who only needed to do 5 WPM to get
on the air.

Later on, I complained about losing my priviledges when incentive
licensing came along.

No ham ever forgets the excitement he/she experienced when we first
started. We get confortable with our technology and our operating
habits.

Heres my point: The "Ham generation gap" will always be there. It is
up to us to bridge it. It wont happen naturally, we have to make a
concentrated effort. The "old hams" have to understand that technology
changes and the "new hams" have to understand that "old hams" are
set in their ways.

Enjoy the hobby, ignore the trouble makers.

Smitty, NA5K

I do mobile CW and everything is copied in the head.

Permit me to make a few suggestions when you work a mobile CW station:

When answering a CQ from a /M CW station, send your call more than once. I get frustrated when someone only sends their call once and I miss it.

Use common abbreviations. Not being able to write it down, if I am unfamiliar with the abbreviation, it just flys right on by.

Dontruneverythingtogether. Once again, I cant go back and attempt to decypher what was sent.

My commute is about an hour long and I work 40 CW in the morning (about 6 AM CST) and 20 CW in the evening (about 4:30 PM CST).

Give me a call if you hear me!

Smitty, NA5K/M

Matt,

I got the cold shoulder from many fellow Generals when I went straight for
the General ticket 17 years ago (since I hadn't come up through the 'ranks').
I set my eyes on specific priviledges and went for it.

SB NEWS @ AMSAT $SPC0711
* SpaceNews 11-Jul-94 *

BID: $SPC0711

=========
SpaceNews
=========

MONDAY JULY 11, 1994

SpaceNews originates at KD2BD in Wall Township, New Jersey, USA. It is published every week and is made available for unlimited distribution.

* UNAMSAT-1 NEWS *
==================
David Liberman, XE1TU, reports that the UNAMSAT-1 spacecraft has not yet been launched. A postponment was announced through official correspondence from the Russian Space Agency just a few days before project officials had to depart for Russia, and no statement regarding the length of the delay was mentioned. It has now become apparent that the civil and military crew involved in the launch of UNAMSAT-1 are on summer vacation, possibly delaying the launch until September.

In the mean time, project officials are experimenting with the satellite on the ground, making small adjustments, and testing the satellite for all possible situations. Through this experimentation, a problem with the fire code not resetting the CPU was discovered. All the operating software has been loaded on the satellite and is running well. The BBS is being used by local amateurs with microsat ground stations.

[Info via David, XE1TU of the UNAMSAT-1 Team]

* AO-13 ATTITUDE CHANGE *
=========================
The AMSAT-OSCAR-13 satellite has undergone a recent attitude change. The following message issued by spacecraft controller G3RUH explains some of the details:

L QST de G3RUH 1994 Jul 05. Magnetorquing from attitude 243/+5 to 180/0 commences on Jul 07 [Thu] 0510 utc, orbit 4642/224, and continues for 10+ perigees. Estimated interim attitudes are: Orbit Alon/Alat: 4643 235/+4: 4645 221/-2: 4647 211/-10: 4649 205/-10: 4651 193/-12: 4653 181/-13, then a final adjustment. For command purposes during this 4-day period mode-S beacon is ON MA 140-150, i.e. mode-B OFF for 26 mins. The new schedule will start orbit 4651 MA 150 Jul 11 [Mon] 0851 utc. 73 James.

Magnetorquing (attitude changing) is not an exact science, and minor deviations from the above plan sometimes occurs.

Please don't rely on gossip and rumour! Continuous up to date information about AO-13 operations is always available on the beacons, 145.812 MHz or 2400.664 MHz in CW, RTTY and 400 bps PSK. These bulletins are also posted to Internet, ANS, Packet, PacSats etc., and many international newsletters. A 400 bps PSK decoder is available from G3RUH and several DSP products; display software P3C.EXE etc. from many AMSAT groups.

The active command stations are listed below, and constructive feedback about operations is always welcome.

Peter DB2OS @ DB0FAU.#NDS.DEU.EU
James G3RUH @ GB7DDX.#22.GBR.EU
Graham VK5AGR @ VK5WI.#ADL.#SA.AUS.OC

The above may also be reached via Internet (callsign@amsat.org) and KO-23. Please remember to state clearly a return address.

[Info via James Miller, G3RUH @ GB7DDX.#22.GBR.EU]

* LUSAT-OSCAR-19 NEWS *
=======================
The LUSAT-OSCAR-19 satellite continues to operate without its file server running. The following beacon was received from LO-19 by KD2BD in New Jersey last week:

LUSAT-1>AMARG <UI>:

May 21.

OBC crashed on May 17 at +/- 2:45 utc, lat 45s, lon 43 w.
Only digipeater is available.

LU8DYF, LO-19 command station.

Although the file server is not available, the satellite does function as a digipeater, and other ground stations can be connected to via LUSAT-1.

* DOVE DECODER AVAILABLE *
==========================
A DOVE-OSCAR-17 satellite telemetry decoding program for the MS-DOS operating system has been created by KD2BD and is now available via anonymous FTP at pilot.njin.net. The program has been compressed into a file called "duvdec10.zip", and is located in the /pub/SpaceNews/software sub-directory at pilot.njin.net.

The program will read and interpret ASCII telemetry transmissions made by DOVE-OSCAR-17 and generate reports based on that data. The software is free and is intended for non-commercial use.

* THANKS! *

There's a program called superior morse for unix boxes. It only has sound support for Sun, HP, and generic X11. The X11 support did not work for me, but I have created a sound support file for NeXT using the NeXT soundkit. It can be found at oak.oakland.edu below the /pub/hamradio directory. Can't recall the exact location, but it's somewhere like programs/unix.

297. Re: Keyers and Positive/Negative keylines

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 16:27:39 UTC
From: yee@mipg.upenn.edu
Message-ID: <YEE.94Jul8122741@mipgsun.mipg.upenn.edu>
Source record: 263898
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

Thanks to those who answered my queries regarding positive and
negative key lines.

Now let me explain the reason why I asked. Any suggestions would be
most appreciated.

I built the basic CMOS Super Keyer II awhile back. My intent is to
eventually have a keyer that is as compatible as possible to any sort
of radio equipment out there. The basic CMOS Super Keyer II uses a
2N2222 (?) for a positive key line.

I reasoned that there are several possibilities out there:
1) the to the rig could be either a phone or a phono jack.
2) the rig could be positive or negative key line
3) an external power supply may or may not be available.
4) ????

For possibility 1, I put in phono and phone jacks when I originally
built the unit.

For possibility 2: When I originally built the unit, I installed a
DPDT switch for the purpose of switching between the two types of key
lines. I built the MOSFET level converters (both positive and
negative) in an old QST article. The positive was built on the off
chance there is a rig out there that has a positive key line but draws
a lot of current. These were built over the last two nights and
tested. I have not yet been put into the keyer since I need to
purchase a 2P3T switch. I would prefer to use the DPDT switch as I
have plenty of them but the both ends of a nine volt battery needs to
be switched so that I have +9V and -9V depending upon which level
converter is on line. Further, I figured out the I need to use a
switch on the output of the two level converters. For some reason,
the level converter not on line seems to short out the output of the
other level converter if both outputs are wired together. While I
hope to figure out how to avoid using a switch here, I am resigned to
spending the money.

For possibility 3: I inserted an extra RCA jack to put in +12V when I
built the unit. I would have preferred to use the ARRL standard MOLEX
plug for this purpose but didn't want to use up the real estate on the
case and I have plenty of RCA plugs lying around. My plan is to use a
1N400x (i.e. whichever I happen to have lying around) in case the
polarity of the external power supply is screwed up. From the looks
of it, the +9V is not critical so I will either use a 7810 or a
crowbar IC to power the positive level converter. A 7805 will be used

to power the keyer itself. The -9V for the is a bit more difficult but according to Horowitz and Hill, I can use a MAX632 (?) to get -12V. Unfortunately, I have no experience in using a switching regulator. I am hoping that the voltage drop due to the 1N400x will not screw up the MAX632; I don't have the data sheet. Hopefully, the output of a few hundred mils will be all that I need. I suppose I'll need some sort of relay to switch between the internal and the external power but I haven't even begun to figure what parts I will use.

An unexpected problem is that I started this project with a rather SMALL box and am afraid that I will run out of real estate. As it is, the box already has three layers. The lowest is the keyer circuit itself. The highest is the AA battery holder glued to the top of the box. I am hoping that I can squeeze the level converters in the middle. The 9V battery is squeezed on the side of the box. I have no idea where I can put the power supply circuits.

>Any comments pro or con? Thanks! ---Dan, N9XDK
>--

You are absolutely right. Also, thieves can look up your address in
the callbook and have a field day while you are in your car.

I haven't had a problem with this yet....

I suggest that you remove your equipment from your car if you
leave it and make it obvious that you did. I typically leave
the coax connector and power cord visible and not connected
to the radio (which is in my briefcase or back pocket).

If you have more than a handheld, well, then good luck.

>That's why the entire VE system should be thrown out. Witness the
>current scam in L.A. We need an authoritative body to administer
>the exams. After all, do we as drivers administer driving exams?

yes...although they happen to be employees of the DMV office..

>Do those who are aircraft pilots administer pilot license exams?

there are 2 exams to a pilot's license.

one is a written test...the other is a flight test by an FAA examiner who has to be a pilot...so there.

I would say that the guys in LA appear to have been at least detected if not caught, so I would say that the VE system cheating detector is working even if it's not as sensitive as it might need to be. it's better than it was more than a decade ago -- no mid-week early morning testing 125 miles away and all that.

in a perverse way, i feel proud to know that my extra license that i merely worked for is worth hundreds, if not thousands of dollars to the slackers out there.

IF i was ultra concerned about the potential for cheating in the VE program, i would be a VE so i could take part in exam sessions and at least observe that things are going right instead of just hoping it will all go away...

Hi Matt, I have a hypothetical question for you. What would you do if you tried for hundreds of hours to learn to receive Morse code at 13 wpm and just could not do it? I can force my brain to function as a modem but I know somebody who cannot, and he is otherwise a very knowledgable, intelligent person and an asset to the ham community.

[[EXAMNT7.07 : 3338 in EXAMNT7.07]]

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and
10 weeks after the test session. The FCC considers their
processing time to be 90 days--from the date they receive the
application. The FCC usually receives the application one
to two weeks after the test session (once the VE Team and the
coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a
Morse code test) will not receive a new license from the FCC.
The existing Technician license plus the CSCE conveying the Morse
code test credit is the only documentation issued for use of
the additional HF privileges.

****

The following test session information is provided by the
ARRL/VEC for the upcoming six to eight week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or
how to locate Amateur Radio clubs, instructors, licensing
classes and/or Novice examiners in your area; please contact
the ARRL Educational Activities Department (EAD) at 203-666-
1541 x219. The EAD can also provide information on
recommended study materials. Electronic mail may be forwarded
to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to

MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541
The 1994 test fee is $5.75.

302. US License Examination Opportunities Scheduled 7/07/94 to 10/10/94

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-08 17:48:00 UTC
From: "Jahnke, Bart" <bjahnke@arrl.org>
Message-ID: <2E1D9176@arrl.org>
Source record: 263900
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Special Note: Amateur Radio licenses usually arrive between 8 and 10 weeks after the test session. The FCC considers their processing time to be 90 days--from the date they receive the application. The FCC usually receives the application one to two weeks after the test session (once the VE Team and the coordinating VEC have completed their processing).

Note: Codeless Technician to Technician w/HF upgraders (who pass a Morse code test) will not receive a new license from the FCC. The existing Technician license plus the CSCE conveying the Morse code test credit is the only documentation issued for use of the additional HF privileges.

****

The following test session information is provided by the ARRL/VEC for the upcoming six to eight week period. For further information, please contact the test session CONTACT PERSON at the telephone number provided. If necessary, you may contact the ARRL/VEC at 203-666-1541 x282 for additional information. Electronic mail may be forwarded to the ARRL/VEC via USENET at "bjahnke@arrl.org" or via MCI Mail to MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does not indicate whether walk-ins are accepted or not, most test sessions do allow walk-ins. We encourage you, however, to always contact the CONTACT PERSON at the telephone number provided so that the VE Team is aware that you be attending the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 203-666-1541

The 1994 test fee is $5.75.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;

(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121

(or) 907-274-5546

C = Central Alabama VEC, 1215 Dale Dr SE, Huntsville, AL 35801;

205-536-3904

N = Charlotte VEC, 227 Bennett Ln, Charlotte, NC 28213;

704-596-2168

D = Great Lakes ARC VEC Inc., 3040 Harrison St, Glenview, IL 60025;

708-486-8019

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;

818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;
504-737-2315. Test fee for 1994 is $5.00.

K = Koolau ARC, 45-529 Nakuluai St, Kaneohe, HI 96744;

808-235-4132

L = Laurel ARC Inc., PO Box 3039, Laurel, MD 20709-0039;

(d) 301-572-5124, 301-317-7819, (n) 301-588-3924

M = The Milwaukee RAC Inc., 1737 N 116th St, Wauwatosa, WI 53226;

414-774-6999. Test fee for 1994 is $5.00.

H = Mountain ARC, PO Box 10, Burlington, WV 26710; 304-289-3576,

301-724-0674

P = PHD ARA Inc., PO Box 11, Liberty, MO 64068; 816-781-7313

R = Sandarc-VEC, PO Box 2446, La Mesa, CA 91943-2446; 619-465-3926

S = Sunnyvale VEC ARC, PO Box 60307, Sunnyvale, CA 94088-0307;

408-255-9000

T = Triad Emergency ARC, 3504 Stonehurst Pl, High Point, NC 27265;

919-841-7576

W = Western Carolinas ARS VEC, 5833 Clinton Hwy - Suite 203,

Knoxville, TN 37912-2500; 615-688-7771.

The 1994 test fee is $5.75.

5 = W5YI-VEC, PO Box 565101, Dallas, TX 75356-5101; 817-461-6443

The 1994 test fee is $5.75.

I picked up three camcorder viewfinders at a surplus electronics store a
few years ago. They run off 12 volts, and are lightweight. I would
suggest you scan the electronic experimenter magazines for these type
places. The ones I got were only about $20 apiece, so you should be
able to find something at a reasonable price.

I really tried to avoid this: I looked on the on-line license list
and called lots of information operators...to no avail. I am trying
to locate my friend Greg Barrett N5BDJ. His license was last issued to
a Thorsby, Alabama, address, but I last spoke with him when he lived in
the Atlanta, Georgia, area.

I know he operated a packet station but am having trouble finding
him. If you can reach him, please ask him to call me, Kurt Sauer, at
512-346-1506 or at work at 512-329-2414.

Okay, I guess I should get off my duff and get an amateur license myself,
then I could to my own dirty work! Thanks for any help you could lend.

|> current scam in L.A. We need an authoritative body to administer
|> the exams. After all, do we as drivers administer driving exams?
|> Do those who are aircraft pilots administer pilot license exams?

Yes, that is precisely what they do....

What defines an "authoritative body" after all? In the case of an applicant
for a pilot certificate, the checkride will be given either by one of

(1) An FAA examiner/employee, who gets his job qualification from being
an experienced pilot and instructor.

(2) An FAA designated examiner, who also gets his job qualification from
being an experienced pilot and instructor. He doesn't work directly
for the FAA, yet his job depends on their scrutiny of his actions.

Both examiners are required by law to test to the exact same set of standards.
And if an examinee causes problems (i.e. an accident) later, either
type of examiner *will* have his methods called into question.

Thus in either the case of pilot certification or radio operator licensing,
we have the experienced evaluating the inexperienced. The same parallel
can be drawn for any type of education followed by issuance of credential.

Neither system is perfect, but they both work in spite of their flaws. IMHO,
the only higher possible source of "authority" for we imperfect humans
doesn't exist in a tangible physical form :)

>>> If CW is such an effective filter, and all those on HF have 'passed'
>>>this 'initiation' then please explain the poor operating practices on
>>>the bands...

All this shows is that anyone can learn CW - lids or future good ops.
But those who stick with CW as a primary mode become, for the most
part, the best behaved ops.

> As of 5 hours ago, 2130 UTC, I started learning the code.
>I can now, with no trouble, recall the letters
>a e i t n m
> and
> ...-.- (the "break" if that is indeed a legit cw sign)

Matt: ..._._ is the prosign SK (commercial ops write VA) and is used
to indicate the end of a QSO (or broadcast on the commercial freqs);
it is supposed to be the very last signal you send before going on
to another QSO or going QRT.

Technically, SK or VA means ``End of Work''.

The `break' or BK prosign is _..._._ although the commercial ops
use BT: _..._

So since it appears that most of the lids are the SSB ops who learned CW
but never used it, then having them retake a cw test to renew their license would
force the lids to have to maintain a knowledge of the code, thus making them
non-lids? :-)

162.xx - the xx varies from locale to locale. With a scanner just scan
from 162.00 to 163.00 and if one is close enought to pickup it will find
it. Warning - most remote areas are too far from the NOAA stations to
pickup, the NOAA stations are usually near major airports, and I am not
aware of repeaters.

I don't believe this topic is covered in any of the ARRL study guides.
Since you seem to be in the know, could you tell us about the color coding?
If I say that I am wearing white socks, have I inadvertently indicated an
interest in some particular sexual activity? Could you perhaps provide us
with a table of sock colors and what they mean? I can't imagine bringing up
"sock colors" myself (I still have trouble with the Q codes), but I would
definitely like to know the meaning of what I am hearing.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 JULY AND FORECAST FOR 09 JULY - 11 JULY

No IPS Disturbance Warning is current

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 086/029

GOES satellite data for 07 Jul
Daily Proton Fluence >1 MeV: 2.4E+06
Daily Proton Fluence >10 MeV: 1.4E+04
Daily Electron Fluence >2 MeV: 2.7E+07
X-ray background: A6.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Jul 10 Jul 11 Jul
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Jul: 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 07 Jul
Learmonth 04 2221 1111
Fredericksburg 06 20
Planetary 12 16

Observed Kp for 07 Jul: 3433 4333
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Jul 07 Quiet.
10 Jul 07 Quiet to unsettled.
11 Jul 07 Quiet to unsettled.

2C. MAGNETIC COMMENT
None.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Jul normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Jul normal normal normal
10 Jul normal normal normal
11 Jul normal normal normal
3C. GLOBAL HF PROPAGATION COMMENT
NONE.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T-index for 08 Jul: 29

Predicted Monthly T-index for July is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Jul 30 Near predicted monthly values.
10 Jul 30 Near predicted monthly values.
11 Jul 30 Near predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
None.

Why were they even posted here? Wouldn't rec.radio.scanner be the
appropriate newsgroup for such lists? This group will become a mess
of scannerists start posting their favorite freqs.

You do have a point here. Sometimes you actually have to get out of the canoe
and hike up a hill to hit a repeater... :)

Another option is a 20 meter QRP transceiver (if you have the license...)
They are small and 20 meters is a good band to contact someone on most any day.

My 2 cents worth...

330. Re: Weather Radio freqs?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 00:18:14 UTC
From: dfk@col.hp.com
Message-ID: <2vkqc6$7gr@hp-col.col.hp.com>
Source record: 263930
Cross-posted to: rec.backcountry,rec.radio.amateur.misc

I called our local NOAA station here and they actually sent me a US map
with all the stations indicated and their frequencies. Of course now I
can't lay my hands on it!. (It was old anyway).
Anyway the frequencies are:

*162.400 MHz
162.425 MHz
162.450 MHz
*162.475 MHz
162.500 MHz
162.525 MHz
*162.550 MHz

The three freq's with the "*" cover 99% of the stations. The other
freq's are available for future expansion. In travelling around
the Rockies and Mid-West, I've never heard a station on
any freq except the "*" ones. With my mobile rig and 2 meter band
5/8-wave antenna, most stations can be heard up to 30 miles away,
and some up to 50 miles. With a handheld scanner and rubber duck
antenna, you may not do as well. Of course antenna height and
line-of-sight make all the difference.

One of the best items to carry in the backcountry for emergency use
would be one the new personal EPIRBs. (Emergency Positioning Indicating Radio
Beacon), They are now available in the new 406 version. They are about as
small as some 2Mtr handhelds, and would provide better coverage and protection
then most any other kind of communications gear. No licencing is required, but
they should be registered.

HF gear would be unreliable due to atmospheric conditions. VHF/UHF
would depend on nearby links, which most likely would not be available.

Just my 2 cents........

SB PROP @ ARL $ARLP027
ARLP027 Propagation de KT7H

ZCZC AP41
QST de W1AW
Propagation Forecast Bulletin 27 ARLP027
From Tad Cook, KT7H
Seattle, WA July 8, 1994
To all radio amateurs

SB PROP ARL ARLP027
ARLP027 Propagation de KT7H

Activity increased a bit over the past week. Solar flux was up 10 points on the average compared to the previous reporting period. Geomagnetic indices varied from quiet to unstable. The worst day was July 2 when the K index reached five for several periods.

Look for solar flux to decline to about 75 around July 13, and then rise again to about 90 around July 22 to 25. Possible dates for disturbances are July 16, 24 to 26, and August 1.

Sunspot Numbers from June 30 through July 6 were 50, 57, 68, 61, 57, 38 and 51, with a mean of 54.6. 10.7 cm flux was 82.6, 86.7, 82.8, 86.4, 84.6, 83.4 and 84, with a mean of 84.4.

The path projection for this week is from Boston, Massachusetts to Greenland.

80 meters looks good from 0130 to 0630z, with the peak period around 0400. 40 meters looks good from 2230 to 1000, peaking around 0300 to 0500. Check 30 meters from 2030 to 1230, with the best time around 0100 to 0600. 20 meters and above does not look promising, but on some days 20 meters may be open around the clock, except for the period from 0600 to 0900.

>

It'll hold up; Part 97.103(b) covers this situation exactly. All the station owner has to do is note in the station log (not required, but a good thing to have) the date and time the owner made someone else the control operator, and the time the owner resumed control.

>

Oh, come on -- you really want to smear the 30,000+ VEs who volunteer
their time and efforts to run the tests honestly and fairly because of
a few bad apples in one location, who were in fact caught at it?
Don't you think that folks have gotten drivers or pilots licenses by
bribery? There's always going to be someone who tries to take
advantage of the system for personal gain -- that's no reason to throw
out the whole system.

>an RFD?

My HT1T card came from SM0KCR (S-M-Zero-K-C-R).

As far as an RFD for QSL routes, no need for that. A service is already
available on the Internet. Simply send email to

qsl-info@aug3.augsburg.edu

with the DX calls in the message body. I don't know the exact syntax,
but one call per line worked for me. The QSL routes will come back in
the return mail; in my case, usually within one minute.

Ray, WQ5L, rrrocker@rock.b11.ingr.com, is the person responsible for this
truly wonderful service. I have been able to find routes that I could not
find in the W6GO List. If Ray gets hit by a truck, I'll probably stop
working on my DXCC :-) :-).

And, if you have routes not already in the list, please do inform

dl1sbf%db0sdx@db0fho.et-inf.fho-emden.de

of them. DL1SBF is where Ray gets his updates from.

SAREX Mission Status 7/8 at 23:00 EDT

Silver Spring, MD, July 8 1994 at 23:00 EDT

The Space Shuttle Columbia roared into the blue skies of the Kennedy Space Center today as the second International Microgravity Laboratory Mission (IML-02) began. The near flawless launch countdown sequence resulted in an on-time launch of the STS-65 mission at 16:43 UTC. The seven member crew of STS-65 will spend 14 days on-orbit. Two of the crew members are ham radio operators. They are Shuttle Commander Robert Cabana, KC5HBV (just licensed) and Don Thomas, KC5FVF. The two will operate the Shuttle Amateur Radio Experiment (SAREX). SAREX is a secondary mid-deck payload that allows ham radio operators and school students the opportunity to talk to the astronauts while they are in orbit. Ground based amateur radio operators can communicate with the two astronaut hams through packet radio and, when time permits, via voice contacts. Thirteen scheduled school group contacts with students in the US, Germany, and Japan are also planned.

The SAREX Working Group expects the SAREX payload to be configured and operational approximately 23 hours into the flight or at approximately 16:30 UTC on July 9. Since the launch was on time, the pre-launch Keplerian element set, JSC-004 is still valid. This element set, developed by Gil Carman, WA5NOM, is provided below for your convenience.

346. Collecting NASA SELECT ATV frequencies.....

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 04:22:30 UTC
From: jtg0707@uxa.cso.uiuc.edu
Message-ID: <2vl8m6$jp5@vixen.cso.uiuc.edu>
Source record: 263942

Hello

Now that I have a little free time between projects, I am trying to put
together another NASA SELECT frequency lists for ATV and 70cm bands, I
will be much obliged if you can send me some of the frequencies in your locale.
I'll post the list to the net as soon as Y get enough of them.

I will also be interested in compiling a list of channel numbers and cable
companies that carry the NASA SELECT in their systems.

I prefer email, since I just can't keep up with the usenet news postings; at
last count, I am about 8000 messages behind in this news group alone!

Please list your city, state, ATV frequency , 70 cm frequency, cable channel
, cable system(company) and any other useful info about receiving the
transmission.

Thanks in advance.
Joe

347. ARRL BIO-EFFECTS RESIGNATIONSGNS

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 05:00:00 UTC
From: oopdavid@ubvms.cc.buffalo.edu
Message-ID: <Csnn3B.7s1@acsu.buffalo.edu>
Source record: 263748

As a former member of the ARRL Biological Effects of RF Radiation Committee, I am compelled to bring out a summary for interested readers on the events leading to the resignation of our committee. The article in the most recent ARRL letter offering insight is lacking sufficient information to explain the actions of our group. The letter is broken down into several pages which follow this posting.

In summary, our committee was formed in 1990 when considerable interest in the possible biological hazards of non-ionizing radiation were becomming apparent to the amateur community. We assisted in writing several ARRL publications. Shortly thereafter a scenario developed, which in retrospect, shows ARRL began to trivialize the importance of possible harm from RF sources and develop their own agenda, separate from their committee's knowledge and scientific recommendations, which responded to a recent FCC NPRM.

Most importantly, when our committee was not asked to comment on the FCC NPRM concerning the adoption of the ANSI 1992 standards, we sent our recommendations to ARRL and received no answer. We then filed our own comments separately in which we, like the ARRL, objected to the 1992 standards. However our reasons were scientific and of unanimous concern to members of our group. The filing was mentioned in the W5YI Report. Shortly, the ARRL began a series of measures to counter the information mentioned. One member of our group was removed for purely political reasons.

We attempted to establish a useful dialog and reinstate Dr. Overbeck to our group, but the ARRL Executive Committee was unchangeable. Thus we have resigned from our positions.

The ARRL has, by their actions, ignored the growing body of evidence concerning the athermal effects of RF radiation and a possible link to some negative health outcomes. The credentials of members on our group were unmatchable in the amateur and international scientific community. Interested parties who may be solicited to join a newly formed committee should find this information helpful.

Interestingly, the letter of resignation to Mr. Wilson which follows in 9 parts was answered by cancellation of my ARRL MCI account within days of receipt. Wilson never sent any personal letters to the members. I heard it in public, just like you.

David J. Rodman, MD
KN2M

348. BIOEFFECTS 1 OF 9OF 9

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 05:03:00 UTC

June 1, 1994

George S. Wilson, III, W4OYI
1649 Griffith Avenue
Owensboro, Kentucky 42301

Dear Mr. Wilson:

The ARRL Bio-Effects Committee writes this letter to detail the series of events leading up to what has developed into an unnecessarily difficult situation to all parties involved. It is not without a certain degree of sadness and disappointment that the Committee feels required to do this recounting, but we feel that the record has become unclear, and it is only appropriate that a correct account be established.

The current membership of the ARRL Bio-Effects Committee was appointed by Larry Price, W4RA, in January, 1990 with the distinctive charge of revitalizing organized amateur radio's concern for the limitation of potential bio-effects hazards that might arise from the participation of individuals in the hobby of amateur radio. The members of the Committee were W. Ross Adey, M.D., K6UI, David Rodman, M.D., KN2M, Thomas Rozzell, Sc.D., WB4ZTT, Samuel Milham, M.D., and Ivan Shulman, M.D., WC2S as Chairman. Wayne Overbeck, Ph.D., J.D., N6NB was appointed as Board Liaison. Since that time, the Committee has worked to re-write virtually all the sections pertaining to bio-effects hazards in all the ARRL publications offered to the public. In addition, the Committee has monitored and reported to the Board on current projects that the Committee has been involved in, including the FCC-EPA study of field strength measurements at various amateur radio installations in Southern California.

In January, 1992 the Chairman of the Bio-Effects Committee wrote to you regarding the appointment of Wayne Overbeck as a full Committee member, as he was no longer on the Board as a Vice-Director. The Chairman also wrote regarding the appointment of a new Board Liaison. The Chairman received no direct response from you in this matter, but was later advised that Mr. Overbeck had been appointed to the Committee after much deliberation.

Early in 1993, the FCC issued Docket 93-62, an NPRM regarding the adoption of the ANSI/IEEE C95.1-1992 guidelines on bio-effects. One would expect that the ARRL, as the largest representative of amateur radio operators in this country, would seek the broadest base of opinion from which to develop a position in this matter. Certainly, one would expect that the Bio-Effects Committee would be the appropriate body within the ARRL from which the League would seek such counsel. Even as of this late date, no such request for information from the Bio-Effects Committee has been made.

Failing to receive such an invitation to provide the League with information and advice in this very important matter, members of the Bio-Effects Committee developed a document suggesting a position to be taken by the League in what the Committee expected to be a filing before the FCC. This was sent to the League in November, 1993. The Chairman of the Bio-Effects Committee received absolutely no response from the League on this issue. Mr. Overbeck received a communication from the League acknowledging receipt of the document, but nothing further was heard by any member of the Bio-Effects Committee after that time.

Because of the importance of this matter, and because nothing was sent to advise the authors of the document of a position the League was going to adopt, and because no further input from the Committee had been solicited, and because a deadline in January, 1994 was rapidly approaching, and because of their deep personal and professional concern regarding the importance of this issue, some members of the Bio-Effects Committee made an independent filing to the FCC as individuals, specifically indicating that they were not speaking from their position as members of the ARRL Bio-Effects Committee, but as private citizens.

350. BIOEFFECTS 4 OF 9

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 05:11:00 UTC
From: oopdavid@ubvms.cc.buffalo.edu
Message-ID: <CsnnKy.7wE@acsu.buffalo.edu>

In February, 1994, the Chairman of the Bio-Effects Committee received a call from Jim Maxwell, W6CF advising that he had been appointed to the position as Board Liaison. Again, the Chairman of the Committee had not been consulted regarding this appointment, not did he receive the courtesy of formal advisement of this from anyone at the League other than Mr. Maxwell himself.

On February 16, 1994, a meeting was held between Mr. Maxwell, Mr. Holladay and the Chairman of the Bio-Effects Committee, reviewing concerns expressed at League headquarters regarding the FCC filing by members of the Committee. During this meeting, a long series of MCI communications was reviewed, at which time several issues were clearly established.

1. There had never been a request from anyone at the League for the opinion of the Bio-Effects Committee, soliciting input on the NPRM in question.

2. After receipt of the unsolicited comments of the members of the Bio-Effects Committee in November, 1994, there was never a reply to the Chairman of the Committee, nor was there any further communication with the Committee by anyone at the League regarding the position to be adopted by the League in their filing. Specifically, no draft of the League's filing was sent to the Committee for comments nor review. The Committee was kept completely in the dark with regard to the League's filing and was not informed in any manner as to any position to be adopted by the League in this matter.

3. Other issues regarding the complete failure of League management to consult with the Committee on proposed QST articles, such as the piece on pacemakers published last year, as well as the episode with the aforementioned antenna were documented.

351. BIOEFFECTS 6 OF 9

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 05:14:00 UTC

Further adding to the aggravation of members of the Committee is your statement that "members cited their membership on the Committee to bolster their competency to speak to the subject". That you should feel that Drs. Adey or Milham or any other member of the Bio-Effects Committee need the ARRL to establish or burnish their credentials and competency to speak to anyone on this subject is outrageous and insulting.

The absence of a report to the ARRL Board in July, 1993 is an irrelevant issue. In the form letter sent to Committee Chairmen by Mr. Sumner, there is no demand for such a report, and indeed there is no stated charge in any document to support a contention that such a report is mandatory. The Chairman of the Committee is fully aware that reports to the Board can be useful, but the then current activities of this Committee had not changed from the previous report. Furthermore, as clearly established above, there was no request from the League nor the Board to provide anyone with any information regarding the NPRM, so the Committee had not addressed the issue at that time.

The connection between the filing and your decision to dismiss Mr. Overbeck from the Committee is lost on all of the members of this Committee. The full and sole responsibility for the authorization of the "independent filing" is that of the individual who happens to be the Chairman of the Bio-Effects Committee and not that of Mr. Overbeck. As such, it should fall to that individual to bear the full burden of that decision. That Mr. Overbeck is, in the opinion of the Committee itself, the member best able to put the scientific thoughts and concepts of the Committee in legal terms does not place him solely responsible for the actions that follow the expression of those ideas. It appears that the decision to dismiss him is based upon matters which accompanied the reluctance of individuals at the League to appoint him to the Committee in the first place. Furthermore, these appear to relate to events that occurred outside this Committee, and that preceded this appointment by several years. In our opinion, these prior events should have nothing to do with the current situation.

352. BIOEFFECTS 7 OF 9

Newsgroup: rec.radio.amateur.misc

From: oopdavid@ubvms.cc.buffalo.edu
Message-ID: <Csnnrr.7zG@acsu.buffalo.edu>
Source record: 263751

It should be noted that those members of the Committee who signed the filing were not aware of, and had never been advised of any League policy regarding the independent expression of the views of Committee members, particularly in the absence of any objection expressed to our filing by anyone at the League. Furthermore, Mr. Holladay himself was at a loss to provide the Chairman of the Committee with any formal charge by the League for an ARRL Committee of its duties, until such a document was sent to the Chairman long after the February 16 meeting.

The Committee does feel that the strength of its membership and the authority with which its members are internationally acknowledged to be experts in this field has been ignored by the League in matters of concern. In fact, your term "window dressing" may well be appropriate. There can be no reason other than a desire for "window dressing" to explain the complete absence of any request from the League for information from the Committee regarding this NPRM, the most important governmental proposal that the League has ever had to address on this subject. It appears only logical that the ARRL Bio-Effects Committee might well have been among the first sources of in-house assistance that League officials would have consulted in this matter. As further events have proved, this was not to be the case. The subsequent lack of any substantive communication from the League to the Committee once the Committee's document had been received by the League in November further supports the contention that the views of the Committee have been regarded as superfluous and unwelcome, and perhaps even a liability to any League filing. Furthermore, despite recent promises to improve communications between the League and the Committee, the Committee has even been excluded from the development of a League response during the recently concluded time for reply comments on this NPRM.

353. BIOEFFECTS 8 OF 9

Since receipt of your March 1 letter, the Chairman of the Bio-Effects Committee has had repeated communications with Messrs. Holladay, Maxwell, Heyn and Olson in an effort to find a common ground to enable to committee to function once again. The Committee feels that despite the good offices and the best efforts of the aforementioned individuals, the absence of any willingness on your part to directly engage in a dialogue with the Committee to be very disturbing, and is seen as evidence of your lack of understanding of the strong feelings which have been aroused by your actions and those of the League in matters pertaining to the Committee.

Regardless of expectations that the Committee might immediately respond to your March 1 letter in an angry or non-constructive manner, the Committee has instead patiently waited for any sign that some degree of understanding and a desire for a positive resolution of this matter on the part of the League or yourself might be forthcoming. Numerous discussions have been held between the Chairman, members of the Committee and Mr. Maxwell. We have refused to be drawn into a situation where a favorable end result might be impossible. Apparently, we have waited in vain, as nothing appears to have changed.

The only hopeful sign of progress came on the evening of May 1, 1994, when the Chairman of the Committee received a call from Mr. Olson indicating that the Chairman could expect a call from you shortly thereafter, suggesting that you wished to discuss this more directly with the Committee. This information was further corroborated by Mr. Maxwell about a week later. As of this date, a month later, no such telephone call has been received.

In response to the post about CW operators making better hams, I would think that the type of the person (i.e. follows the rules, obeys the laws, acts professional, etc), not the mode he operates, would determine what kind of operator he or she is.

I guess its time for me to put my $.02 in.

I am a no-code tech. I have tried to learn the code, using both tapes and computer tutors. The big problem that I have is that I can't distinguish the tones of the dot and dash. When dots and dashes are sent together, they sound like one sound to me. I plan to take a hearing test in the future to see if I actually do have a problem. I do want to upgrade to HF in the future. Unlike others, I am not lazy - I have actually tried to learn the code!

Now on to my plan. Why can't we designate a portion of the HF SSB frequencies for no-code people. The test for the no-code HF frequencies could concentrate more on operating practices (which some people seem to forget), and technical knowledge for the operation of a HF station. As far as turning the ham bands into CB bands, I doubt it will happen. I have listened to 2 meters for almost 2 years and actually transmitted for the past 7 months, and I find most of the no code techs to be very professional and obey the rules. The fear of VHF/UHF turning into CB wastelands hasn't happened, at far as I have heard. The lids that I have heard are some (a small few) of the "old timers" who interrupt transmissions, use "break" instead of saying their call signs just so they can interrupt, and other irritating practices. I am not saying all bad operators are experienced, I am saying that some of them have been hams for 40+ years and should know better.

I didn't mean this post to offend, and I hope no offense was taken.

>knowledgable, intelligent person and an asset to the ham community.

Hi Cec, I have a hypothetical question for you. What would you do if
you wanted to become a commercial airline pilot but your eyesight
was such that you couldn't pass the FAA medical exam? Accept your
limitation and go on with life? Or try to change the regulations?

I don't want to sound mean towards your friend but for 70 years there
have been those desiring to be hams who couldn't pass the code test.
They accepted their limitation and went on with their lives.

I've directed followups to .policy.

I'm waiting till we can run Internet over Packet Radio before I get interested.
Don't mind the low throughput, beacuse it's cheap(er than leased lines).

Why *is* amateur radio so resticted in this country?

364. Pittsburgh Mentor Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-09 14:01:59 UTC
From: sawinikoff@delphi.com
Message-ID: <BY7zpB-.sawinikoff@delphi.com>
Source record: 263959

I would like to sit and observe a Pittsburgh, Pa. area ham in operation.
The reason is that I am going to sail to Bermuda next summer in a 35' boat
and feel that a ham and SSB license would be an active safety feature.
I need to get a feel for what is involved before deciding on just the
SSB or to get a ham license.

From: wwhitby@aol.com
Message-ID: <2vmd3i$k2q@search01.news.aol.com>
Source record: 263960

Remember, all of the lids that operarate SSB had to pass a 5 or 13 or 20 words per minute test to be able to operate on those HF bands that they trash. CW didn't seem to work as a filter to keep those poor operators out, did it?

I still think a person's desire to obey the rules and be professional determines what kind of operator he or she will be, not the fact that they have passed a CW test.

: Summary:
: Keywords:

The Cushcraft antennas are wonderful with one caveat: the R-7 has a propensity to blow traps if you use any power level over perhaps 100 watts. This is a very well-known problem with the R-7, and is apparently inherent in the design.

The R-5, which is identical except that it does not cover 40 meters and has better 20 meter bandwidth, does not have this problem.

Both antennas perform very very well.

In my opinion the best system is to go with an R-5, and string a dipole, shortened if necessary, for 40 meters. Except for dxing, often a dipole does better on 40 due to polarization and angle of radiation (higher).

The R-5 is a truly wonderful antenna. I've worked the world with mine, using only 100 watts.

The R-7 is probably OK if you won't be running over 100 watts. I still would go with the r-5 due to the foregoing.

Message-ID: <9407091341115240@arbbs.simivalley.ca.us>
Source record: 263966

I've been asked by a radio magazine to prepare an article about
T-hunting. What I'm looking for are answers to the following questions:

1. Do you have any funny/interesting T-hunt stories that you would like
to share?

2. Do you know of any clever techniques/shortcuts that a T-hunter can
use to find the hidden transmitter?

3. If you have ever operated the hidden transmitter, have you used any
special techniques to throw the T-hunters off track? This would include
changing the polarization, transmitter power, etc.

4. Where are some novel places that a transmitter has been hidden.

Hi Scott: Congratulations! I am basically in the same boat. I passed the
tech with code last month, I passed the general theory today (took the advanced
theory but failed it). I will take the advanced theory again next month. I
have a feeling were are looking at four months at least before our tickets
arrive.

Joseph:
I happen to be in a local amateur radio shop last week and actually saw the th-79a. It is a solid little ht. They had just gotten them in. They didn't have a spec sheet. They gave a quote of $499, and this store...Gifler Electronics in Park Ridge NJ is very reasonable...so you got a good price. I would be
interested in finding out what you learn about the TH-79a...I am looking for a ht myself.

The 3-Hr Ap Indices for 05 JUL 94 are: 8 8 6 5 6 11 9 12
Greater than 2 MeV Electron Fluence for 06 JUL is: 1.7E+08

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7746 (N10E22)
produced the largest flare of the day, a B7/SF at 06/1650Z
which was associated with a Type II sweep. This region
continues to grow and has developed some mixed polarities. New
Region 7747 (S17E34) was numbered as a small B-type group.

Solar activity forecast: solar activity is expected to be
very low to low. C-class flares are possible in Region 7746.

The geomagnetic field was quiet to unsettled. The greater
than 2 MeV electron flux at geosynchronous altitudes was high
for most of the day.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly unsettled with some active periods for
the next three days.

Event probabilities 07 jul-09 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 07 jul-09 jul

A. Middle Latitudes
Active 30/30/30

---
05 Jul: 2104 2109 2114 B1.4 SF 7746 N10E34 III

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,

Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

SB SAREX @ AMSAT $STS-65.002
SAREX Status 7/10 at 1:00 UTC

Silver Spring, MD, July 10 1994 at 1:00 UTC

At approximately 22:30 into the flight of STS-65, the Shuttle Amateur Radio Experiment was set up and activated. One orbit later, as the Shuttle passed over the southern portion of the US, the Bair Middle School in Sunrise Florida had an opportunity to chat with Commander Bob Cabana, KC5HBV. During the conversation, he looked out the window and reported seeing partly cloudy weather as he passed over Florida. The Bair Middle school had an outstanding horizon-to-horizon contact. The team at the school reported that 22 students talked with Commander Cabana during their contact opportunity.

Gil Carman from the JSC ARC reports that element set JSC-004 varied from the orbit 16 state vector by 15 seconds. A new element set, JSC-005 has been generated and is provided below.

STS-65

NOTE: The Effective Sunspot Number for 07 JUL 94 was 38.0.
The Full Kp Indices for 07 JUL 94 are: 3+ 4- 3o 3- 4o 3- 3- 3o
The 3-Hr Ap Indices for 07 JUL 94 are: 19 24 16 11 27 11 14 17
Greater than 2 MeV Electron Fluence for 08 JUL is: 1.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was low. Region 7749 (S09W10) produced
the only significant event the period, a C1/SF at 08/0538Z.
Region 7747 (S15E08) showed the only growth with increases in
spot area and number. All other regions are in slow decline.

Solar activity forecast: solar activity is expected to be
low. Region 7747 has the best chance of producing C-class
flare activity.

The geomagnetic field has been at mostly quiet levels
for the past 24 hours. The GT 2 MeV electron flux at
geosynchronous altitude was moderate for most of the day.

Geophysical activity forecast: the geomagnetic field is
expected to be mostly quiet for the next two days. Unsettled
to active conditions are expected at high latitudes on the third
day.

Event probabilities 09 jul-11 jul

Class M 05/05/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 09 jul-11 jul

A. Middle Latitudes
Active 25/25/30
Minor Storm 10/10/10
Major-Severe Storm 05/05/05

B. High Latitudes
Active 30/25/40
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all
regions. Conditions are expected to remain unchanged over the
next 3 days.

Source record: 263728

In <2vk24c$rs0@newsgw.mentorg.com> jbate@rtp-nc.mentorg.com (John Bate) writes:

>You are absolutely right. Also, thieves can look up your address in
>the callbook and have a field day while you are in your car.

In New York anyone can go to the DMV office where you pay parking
tickets and stand on line to get the name and address for any plate,
for a small fee (?). Last month I saw a piece on the local news
saying that there will be a way to get the same info over the phone
for about $15! This is supposed to be protection for people buying
used cars only to find out that their buying a stolen car.

So a thief with a stolen cell phone can use a stolen credit card to
get info on _any_ plate! Comforting, no?

381. VHF & UHF in NYC Metro Area

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-10 02:09:27 UTC
From: ss@JH.Org
Message-ID: <2vnl8n$5nr@snoopy.jh.org>
Source record: 263729

I am a former Ham (WA2WSQ) and am currently studying for the no-code tech license (as a starting point). I was active in 2 meters (about 15 years ago) and I found my old rig, a Drake TR-22C (you remember, the one with the fly? :-). Lo and behold it still receives! (I _really_ haven't tried to kerchunk a repeater sans-license, believe it or not).

The crystals in it are as follows:
1 147.09/147.69
2 147.00/146.40
3 146.88/146.28
4 146.79/146.19
5 146.97/146.37
6 146.76/146.16
7
8 146.94/146.34
9
10
11 146.58 simplex
12 146.52 simplex

Could some kind sole give me call-signs and locations of these repeaters (if they are still there)? I'm trying to set up a simple (translation: cheap) antenna. I've have heard some of the stronger repeaters but I find I remember almost no code :-(and can't copy the IDs.

Once I get a license I'll buy a new HT and save the TR-22C for my 8 year old who is studying with me. What is the state of 2m in NYC today? Should I get a dual band HT?

What about clubs with repeaters? Can anyone recommend any?

I guess this is getting pretty long, thanks in advance for your help.

Steve

Howdy,
I have an old ElectroVoice microphone, type 630 hi Z, which I would like to fit with an element for use with my TS-440. The only info that I could find in the Kenwood owners manual about the microphone was that it was dynamic. Duh??

I have the toll free number to EV but I would like to have all the info I need before I speak with them. What frequency response and or characteristics should I look for in an element??

Thanks in advance.

The 3-Hr Ap Indices for 08 JUL 94 are: 6 6 5 5 7 7 9 7
Greater than 2 MeV Electron Fluence for 09 JUL is: 1.6E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Activity this period
consisted of 3 weak B-class flares. An optically uncorrelated
B1 x-ray event occurred at 09/0031Z, a B1/SF was reported at
09/0934Z from Region 7746 (N12W16) and just recently, a B4/SF
occurred from Region 7749 (S08W21) at 09/1857Z. Weak low
frequency radio emissions were reported from all three events.

Region 7746 has shown dramatic growth over the past 24 hours, mostly in the leader portion of the group. Two new penumbral areas were created, both possibly in a delta configuration. All other regions are stable.

Solar activity forecast: solar activity is expected to be low. C-class, and possible M-class, activity is expected from Region 7746.

The geomagnetic field has been at quiet levels for the past 24 hours at all levels. The GT 2 MeV energetic electron flux has been in the normal to moderate range over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next 3 days.

Event probabilities 10 jul-12 jul

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 jul-12 jul

A. Middle Latitudes
Active 10/20/30
Minor Storm 05/10/15
Major-Severe Storm 01/05/05

B. High Latitudes
Active 15/25/30
Minor Storm 05/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over the last 24 hours. No changes are expected over the next 72 hours, through 12 July inclusive, except perhaps for periods of minor signal degradation during the local night hours for transauroral high-latitude paths. There is an elevated risk for minor short wave fadeouts associated with possible M-class flare activity from Region 7746.

385. WARNING: Ended Potential Satellite Anomaly Warning - 10 July

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-10 05:12:38 UTC
From: oler@rho.uleth.ca
Message-ID: <9407100512.AA28604@rho.uleth.ca>
Source record: 263977
Cross-posted to: rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.info

/\

POTENTIAL SATELLITE ANOMALY WARNING

ENDED: 04:45 UT, 10 JULY

/\

ATTENTION:

Energetic electrons at greater than 2 MeV have been at lower levels
during this last solar rotation than in previous solar rotations. Over the
last 24 hours, fluence levels have dropped to near-normal levels. Fluence
levels will likely now remain at low to moderate levels. The risk for
satellite charging-related anomalies has been reduced.

Consult the daily summary reports for regular descriptions and
information on geosynchronous electron fluence at greater than 2 MeV.

** End of Warning **

386. A question on keying (transmitter)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-10 06:20:06 UTC
From: steve@media.mit.edu
Message-ID: <1994Jul10.062006.29300@news.media.mit.edu>
Source record: 263731

Can anyone recommend a small battery powered radio that will work well in a cluttered urban environment (around long apartment corridors in concrete buildings, etc) and is easy to modify for ``keyed'' transmission (to be received by me or another toy in the same or a nearby building)? I need instantaneous (e.g. within, say, 1 millisecond of ``switch closure'') keying.

I am looking for any general suggestions, as well as the name of a specific vendor where I could order a radio for under $300 that could easily be keyed. I notice that Radio Shack sells a 440 MHz radio for $299, but I am uncertain as to whether or not it is easy to key this transmitter (e.g. by interrupting power to one of the IF stages while keeping the power only to the RF amp and the frequency synthesizer). Even so, perhaps a crystal controlled radio would use less battery power in standby than a frequency synthesizer radio? I have tried experiments confirming my toy car with CB radio, but the CB frequencies are not very optimal for use in typical indoor environments where I run the toy, and I lose the confirmation signal if I am upstairs on the third floor and drive into the basement. Even the cheap business radios (Radio Shack, $119) can do that range!

In any case, I am interested in hearing from anyone who has successfully modified a small radio for keyed operation, or knows of one that already comes with keying capability.

389. HTX202/404 Mods?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-10 07:51:30 UTC
From: chuck62@freenet3.scri.fsu.edu
Message-ID: <2vo9a2$83t@freenet3.scri.fsu.edu>
Source record: 263734

Does anybody have, or know where I can get plans for modifications
(freq. expanding, etc.) for the HTX202 or HTX404? And is it possible to
get the 404 up to 462.675(React)?
Thanks,

chuck62@freenet.fsu.edu
(waitin' for that ticket)

390. Atlanta Hamfest???

Most of the recent 50-100 watt base stations (Micor, MSF5000) use a
Compa-Station cabinet, not a 6 foot cabinet. The Compa-Stations cabinets I
have seen use the 2135 key.

Hi,
The Micor uses a '2135' key which are generic and you should be
able to get one (most likely without cost) from any Motorola service shop.
If you are unable to find one, let me know and I'll mail you one.

Not quite. The 2135 is the key for the mobile radio case. The key for the
Motorola base station cabinet is a 2553.

Both of these are standard Chicago Lock key codes; if you can't get one from
your friendly neighborhood Motorola shop, just get your locksmith to cut you
one by number.

I am completely happy with an Icom W2A with the extended transmit and receive modifications using a lithium AA battery pack.

This rig is able to hit everything from 121.5 satellites to National Park Service in the 170 Mhz range, not to mention and equally wide swath in the UHF area.

I put it in a small Pelican brand waterproof graphite and nylon-resin box and take it everywhere.

I'll give you the benefit of what little experience I've had with this group. Over the past year, cards have been received from the bureau from 9A [Croatia], S5 [Slovenia] and YU [the remainder of old Yugoslavia]. This is for QSLs that have been sent by the DX station to me only. Cards that I have sent via the bureau to this group have as yet to be answered.

I have received no cards yet from the bureau for stations in Bosnia (T9) or Macedonia (4n5, Z3, etc.). This is for contacts that are now 12-18 months old. I confirmed Bosnia via a DL QSL manager [worked well] and confirmed Macedonia direct to the licensee [on the second try]. -- I also have confirmed Croatia [9A] direct to the licensee [came right through--no problem].

Given the general conditions in the region, I consider it outstanding that the guys are on the air at all; likewise, the QSLing is a little slow but possible. 73,

Michael Christie, K7RLS
Crawfordville, Florida

Greater than 2 MeV Electron Fluence for 09 JUL is: 1.6E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Activity this period
consisted of 3 weak B-class flares. An optically uncorrelated
B1 x-ray event occurred at 09/0031Z, a B1/SF was reported at
09/0934Z from Region 7746 (N12W16) and just recently, a B4/SF
occurred from Region 7749 (S08W21) at 09/1857Z. Weak low
frequency radio emissions were reported from all three events.

Region 7746 has shown dramatic growth over the past 24 hours, mostly in the leader portion of the group. Two new penumbral areas were created, both possibly in a delta configuration. All other regions are stable.

Solar activity forecast: solar activity is expected to be low. C-class, and possible M-class, activity is expected from Region 7746.

The geomagnetic field has been at quiet levels for the past 24 hours at all levels. The GT 2 MeV energetic electron flux has been in the normal to moderate range over the past 24 hours.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next 3 days.

Event probabilities 10 jul-12 jul

Class M 10/10/10
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 10 jul-12 jul

A. Middle Latitudes
Active 10/20/30
Minor Storm 05/10/15
Major-Severe Storm 01/05/05

B. High Latitudes
Active 15/25/30
Minor Storm 05/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over the last 24 hours. No changes are expected over the next 72 hours, through 12 July inclusive, except perhaps for periods of minor signal degradation during the local night hours for transauroral high-latitude paths. There is an elevated risk for minor short wave fadeouts associated with possible M-class flare activity from Region 7746.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,

and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

UNAMSAT-1 LAUNCH DELAYED

HR AMSAT NEWS SERVICE BULLETIN 190.01 FROM AMSAT HQ
SILVER SPRING, MD JULY 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-190.01

XE1TU Reports That the UNAMSAT-1 Launch Delayed Until September '94

David Liberman (XE1TUU) reports that the UNAMSAT-1 MICROSAT launch has been postponed until early September '94. Originally, XE1TU expected to have UNAMSAT-1 launched into orbit around 15-JUNE-94 aboard a Soviet re-furbished ICBM. This latest delay came one day before XE1TU and his team were supposed to leave for Moscow. The apparent reason for the delay is due to the conflicting vacation schedules of civilian and military personel at the launch site. XE1TU recently received an official letter from Soviet officials explaining this postponement. XE1TU was encouraged by this communication because it means that launch will definitely happen now. In the meantime, UNAMSAT-1 team are working hard to "fine-tune" all the software for the satellite. Except for working some minor software issues, the Bulletin Board System (BBS) software is currently being tested "real-time" by radio amateurs in the local area. UNAMSAT-1 will have a BBS similar to AO-16, LO-19, and IO-26. Inaddition to the BBS, UNAMSAT-1 will carry a scientific payload to detect the velocity and direction of "micro-meteorites." Please stay tuned to the AMSAT News Service (ANS) bulletins for further information about the launch status of UNAMSAT-1.

[The AMSAT News Service (ANS) would like to thank David Liberman (XE1TU) for this bulletin item.]

STS-65 SAREX MISSION BEGINS

HR AMSAT NEWS SERVICE BULLETIN 190.02 FROM AMSAT HQ
SILVER SPRING, MD JULY 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-190.02

STS-65 SAREX Mission Begins!

The Space Shuttle Columbia roared into the blue skies of the Kennedy Space Center on Friday, 08-JULY-94 as the second International Microgravity Laboratory Mission (IML-02) began. The near flawless launch countdown sequence resulted in an on-time launch of the STS-65 mission at 16:43 UTC. The seven member crew of STS-65 will spend 14 days on-orbit. Two of the

crew members are ham radio operators. They are Shuttle Commander Robert Cabana, (KC5HBV who was just licensed) and Don Thomas (KC5FVF). The two will operate the Shuttle Amateur Radio Experiment (SAREX). SAREX is a secondary mid-deck payload that allows ham radio operators and school students the opportunity to talk to the astronauts while they are in orbit. Ground based amateur radio operators can communicate with the two astronaut hams through packet radio and, when time permits, via voice contacts. Thirteen scheduled school group contacts with students in the US, Germany, and Japan are also planned.

At approximately 22:30 Mission Elapsed Time (MET) into the flight of STS-65, the Shuttle Amateur Radio Experiment was set up and activated. One orbit later, as the Shuttle passed over the southern portion of the US, the Bair Middle School in Sunrise Florida had an opportunity to chat with Commander Bob Cabana (KC5HBV). During the conversation, he looked out the window and reported seeing partly cloudy weather as he passed over Florida. The Bair Middle school had an outstanding "horizon-to-horizon" contact. The team at the school reported that 22 students talked with Commander Cabana during their contact opportunity.

The following is the latest keplerian element set for STS-65. Monitor the WA3NAN Shuttle re-broadcast frequencies and daily ARRL bulletins to pick up the latest element sets. The following are the frequencies for the re-broadcasts:

Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland, SAREX Bulletins and Shuttle Retransmissions 3860 KHz, 7185 KHz, 14,295 KHz, 21,395 KHz, 28,650 KHz and 147.45 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT SAREX News Bulletins 3990, 7290, 14,290, 18,160, 21,390, and 28,590 KHz and 147.555 MHz (FM)

Also, bulletins available on INTERNET, via AMSAT News Service (ANS) bulletins, Compuserve, and many of our local Packet Radio BSS.

The following is a summary of the frequencies that the Shuttle astronauts will use during SAREX operations:

All operations in split mode. Do not transmit on the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks : 144.91, 144.93, 144.95, 144.97, 144.99 MHz (Except Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Packet Freqs: Downlink: 145.55 MHz
Uplink : 144.49 MHz

Note: The crew will not favor any specific uplink frequency, so your ability to work the crew will be the "luck of the draw."

APOLLO 11 SPECIAL EVENT STATIONS

HR AMSAT NEWS SERVICE BULLETIN 190.03 FROM AMSAT HQ
SILVER SPRING, MD JULY 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-190.03

Apollo 11 25th Anniversary Amateur Radio Special Event Station Activity

At 16:27 EDT, Sunday afternoon, July 20, 1969, astronaut Neil A. Armstrong spoke the words "Houston, Tranquility Base here. The Eagle has landed." At 22:56 EDT, later the same day, Armstrong stepped down from the ladder of the Lunar Module onto the Moon's surface and spoke the words, "That's one small step for a man, one giant leap for mankind."

To commemorate that historic event twenty-five years ago next week, amateur radio clubs and groups at NASA Headquarters and the various NASA field centers will be on the air as "Special Event Stations", contacting amateur radio operators around the world.

Amateur Radio clubs or groups from twelve NASA locations are currently preparing for the 60-hour special event operating period from their respective facilities. Ham groups from other NASA locations may also be on-line to participate by the time the special event period arrives. This is the first time so many NASA stations will be represented on the air at one time. Contacts with these stations during the special event period will be confirmed on request with a certificate to commemorate man's first steps on the Moon and the special event activity.

Details:

Event Name:
Apollo 11 Moon Landing 25th Anniversary

Date/Time Period:
17:00Z, July 19 through 05:00Z, July 22
(13:00 EDT, July 19 through 01:00, July 22)

Modes:
CW, SSB, FM, Packet, Pactor, Amtor, RTTY, SSTV, ATV, Satellites.

Frequencies:
HF CW/SSB: Check 11 (as in Apollo 11) kHz up from the bottom of
the General Class portion of the amateur radio bands (except 10m SSB:
28.411+ MHz).

Other Modes:
Check modes/frequencies as indicated by the individual stations
below.

QSL Information:
A certificate is being designed to commemorate this special event
activity, which will be individualized for each special event
station.

Domestic Stations: Send a 9" x 12" self-addressed, stamped envelope
to the callbook address (CBA) of the station worked or to the address
specified by the station worked. Attach $0.52 postage to cover return
mailing.

DX Stations: Send a 9" x 12" self-addressed envelope to the
appropriate address, with sufficient IRC's or U.S. Postage for return
mailing of up to 1.5 oz (42.52 grams).
Europe = $1.40US postage (3 IRC);
Mexico = $0.63US postage (2 IRC);
Canada = $0.55US (2 IRC).

SILVER SPRING, MD JULY 9, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-190.05

Weekly OSCAR Status Reports: 09-JUL-94

AO-13: Current Transponder Operating Schedule:
L QST *** AO-13 TRANSPONDER SCHEDULE *** 1994 May 07-Jul 11
Mode-B : MA 0 to MA 170 |
Mode-BS : MA 170 to MA 218 |
Mode-S : MA 218 to MA 220 |<- S beacon only
Mode-S : MA 220 to MA 230 |<- S transponder; B trsp. is OFF
Mode-BS : MA 230 to MA 250 | Alon/Alat 230/-5
Mode-B : MA 250 to MA 256 |

Omnis : MA 250 to MA 120 | Move to attitude 180/0, Jul 11

L QST de G3RUH 1994 Jul 05. Magnetorquing from attitude 243/+5 to 180/0 commences on Jul 07 [Thu] 05:10 UTC, Orbit #4642/224, and continues for 10+ perigees. Estimated interim attitudes are: Orbit Alon/Alat: 4643 235/+4: 4645 221/-2: 4647 211/-10: 4649 205/-10: 4651 193/-12: 4653 181/-13, then a final adjustment. For command purposes during this 4-day period Mode-S beacon is ON MA 140-150, i.e. Mode-B OFF for 26 mins. The new schedule will start orbit 4651 MA 150 Jul 11 [Mon] 08:51 UTC. Magnetorquing (attitude changing) is not an exact science, and minor deviations from the above plan sometimes occurs. Please don't rely on gossip and rumor! Continuous up-to-date information about AO-13 operations is always available on the beacons, 145.812 MHz or 2400.664 MHz in CW, RTTY and 400 bps PSK. These bulletins are also posted to Internet, ANS, Packet, PacSats etc., and many international newsletters. A 400 bps PSK decoder is available from G3RUH and several DSP products; display software P3C.EXE etc. from many AMSAT groups. The active command stations are listed below, and constructive feedback about operations is always welcome.

Peter DB2OS @ DB0FAU.#NDS.DEU.EU
James G3RUH @ GB7DDX.#22.GBR.EU
Graham VK5AGR @ VK5WI.#ADL.#SA.AUS.OC
The above may also be reached via Internet (callsign@amsat.org) and KO-23. Please remember to state clearly a return address.
[G3RUH/DB2OS/VK5AGR]

MIR: The new Soyuz flight has the following 2 cosmonauts boarding Mir as Crew #16: Yurij Malenchenko (R0MIR) & Talgat Musabaeyv (R0MIR). They will be joining Valerij Polyakov (U3MIR) who is attempting to break the manned space flight endurance record. The call signs for the new cosmonauts (R0MIR) are generic for the Mir, so don't be surprised if the call sign should change in the near future. The crew that will be leaving Mir is Viktor Afanasiev (U9MIR) and Yurij Usachev (R3MIR). This information comes from Serge Samburov, Space "MIR" QSL Manager Chief of Cosmonaut Amateur Radio Department NPO "Energia." All Mir contact QSLs should be sent directly to Serge at: P.O. Box 73, Kaliningrad-10 city, Moscow Area, 141070, RUSSIA.
[N2WWD]

DO-17: DO-17 still continues to transmit its voice message on a downlink frequency of 145.825 MHz.

KO-25: There have been several reports showing up on the KO-25 BBS that apparently the NASA 2-line elements are not correct. It seems that they are the elements of a satellite that is within close proximity of KO-25. This problem was first noted by W5RKN and after posting a message to the BBS of KO-25 several operators replied that they also have noted the same problem. All KO-25 users are asked to keep monitoring this problem while inquiries are being made are made about correcting the keps for KO-25. [W5RKN]

The AMSAT NEWS Service (ANS) is looking for volunteers to contribute weekly OSCAR status reports. If you have a favorite OSCAR which you work on a regular basis and would like to contribute to this bulletin, please send your observations to WD0HHU at his CompuServe address of 70524,2272, on INTERNET at wd0hhu@amsat.org, or to his local packet BBS in the Denver, CO area, WD0HHU @ N0QCU. Also, if you find that the current set of orbital elements are not generating the correct AOS/LOS times at your QTH, PLEASE INCLUDE THAT INFORMATION AS WELL. The information you provide will be of value to all OSCAR enthusiasts.

The following is a QST

The FCC proposes automatic operation for high frequency digital operations and more on the alleged California VE licensing scam. Learn what it used to cost to buy a license in La La land on Newsline Report number 881 coming your way right now!

(*****
FCC PROPOSES AUTOMATIC CONTROL FOR HF DIGITAL COMS.

The FCC has proposed amending the Amateur Service rules to authorize automatic control of stations transmitting a digital signal on the High Frequency bands. The action had been requested in petitions filed by the ARRL and the American Digital Radio Society.
In its release, the FCC has proposed to authorize automatic control for stations transmitting data and RTTY in specific subbands of each High Frequency band where such emissions are authorized. It also proposed to authorize communication between a locally or remotely controlled station and an automatically controlled station on any frequency where data and RTTY emission types are otherwise authorized.
The FCC says that it is gratified by the cooperation and dedication of the two amateur organizations in determining the conditions necessary to allow automatic control of stations transmitting data and RTTY on the HF bands. It agrees with the two petitioners that automatic control of amateur stations in the HF bands can, with safeguards, make the transmission of data and RTTY emission types both practical and effective.
The notice of proposed rule making is designated Personal Radio Docket 94-59.

(*****
HOW THE VE SCAM WORKED

More information has come to light on the activities of up to three dozen suspect volunteer examiners thought California. This is the same group of VE's that we have been reporting on since late last year. The bunch that is under government investigation for possible fraud in the testing of candidates for amateur radio licenses and upgrades. Enough information has now surfaced so

that Newsline has been able to reconstruct the way in which the scam may have been operated.

To begin with, this is an overly simplified version of what most likely took place. We preface it by saying there is a lot more paperwork at a ham radio testing session then we are going to talk about, but the FCC does not see every bit of it.

As far as the FCC and Volunteer Examination Coordinators are concerned, there are actually three key documents of concern up the license processing chain. These are the completed Form 610's that bear the signature of the volunteer examiners to certify an individual passed an examination There is a document signed by the Volunteer Examiners to certify that they are charging applicants only for expenses at the prescribed government reimbursement rate. Finally, there is a manifest listing those who attended a session and weather they passed or failed. If our guess is correct, it was by manipulating these documents that fraudulent licensing was possible.

As reported last week, the FCC suspects that allegedly corrupt VE's would either create a non existent test session or hold a legitimate one where additional people who never attended were added to the test manifest at a later date. In either case, it also appears as if names were also added of people who supposedly failed the examination. This, to keep a reasonable looking pass to failure rate.

By way of example. Suppose a legitimate session had ten people who were actually tested. The VE's suspected of wrong doing might then add on another twenty, thirty or even fifty names in the same pass to failure ratio, complete with all necessary paperwork. This material would then be sent to the VEC and then onto the FCC.

Obviously the VEC and the FCC would have had no way of knowing that about the add-ons since only those with passing grades needed to have Form 610 applications. Those who paid the asking price but didn't attend the exam sessions were in fact buying completed paperwork from which they were issued legitimate FCC ham radio licenses.

And those names added on as failures to make the numbers come out right? Most likely they were taken from a nearby telephone book with the allegedly corrupt VE's making out the answer sheets in their name. These were probably people who never even knew that their names were being used in the commission of a federal crime until interviewed by government investigators.

(*****

LICENSE PRICES IN LA-LA LAND

What was the cost of getting a ham license this way? If you believe the talk on some Los Angeles repeaters, the word is that a Novice or No-Code Technician went for $250, a General was priced at $500 and an Advanced Class ticket at $750. And the Amateur Extra -- the grand-daddy of them all -- the Amateur Extra came

with a minimum $1000 price tag, but it would go as high as the applicant would be willing to pay.
The FCC is currently limiting its investigation to the period from the Spring of 1992 to the late winter of 1994. This is a period of about two years. Some in Los Angeles believe its been going on a lot longer. Possibly dating back to the early 1980's. If its proven that all of those being investigated were actively selling ham licenses on a weekly basis for the entire time period, and figuring just one test session a week for each V-E team, the take even then becomes astronomical. In fact, its a figure that's so mind boggling that the internal Revenue Service might even show some interest if its found that no taxes were paid on this income.
Stay tuned. Obviously this story is not over yet.

(*****
CALIFORNIA LICENSE

Also from California comes word that the FCC's Los Angeles Office recently responded to a complaint from the ARRL's Amateur Auxiliary that will probably cost an unlicensed operator some big bucks. The Amateur Auxiliary is a volunteer arm of the American Radio Relay League. It was called in to investigate after it received reports that an allegedly unlicensed amateur radio was promoting his brand of unlicensed operations on the ham bands.
The FCC says that he was using his station to broadcasting a message that citizens of California need not be licensed by the FCC because amateur radio is not interstate commerce. He was also heard issuing his own "California licenses" with call signs using an SC prefix. The SC obviously standing for Southern California. So the FCC just let him rattle on while the agency's engineers used direction-finding techniques to located his station. The government says that it will soon be issuing him a hefty Notice of Apparent Liability for his own, personally licensed, unlicensed operation. The name of the suspect is being withheld pending this punitive action by the FCC.

(*****
PETER I OPERATOR PLEADS GUILTY TO BANK FRAUD

Robert Wilber, N4GCK, of Ypsilanti, Michigan and one of the operators on last February's Dxpedition to Peter One Island 3Y0PI operation, has pleaded guilty to bank fraud and mail theft. According to a report in the Ann Arbor News, under a plea bargain agreement Wilber will receive a sentence of 24 to 37 months in federal prison. He will then be subject to three to five years of supervised probation following his release.
The paper that said Wilber took checks totaling some $113,000 from the mailbox of a University of Michigan professor and cashed them. He was photographed at an automatic teller machine and his

photo appeared in local papers on December 20th, 1993. But Wilber avoided arrest long enough to join the expedition to Peter One. He surrendered on his return, having spent all the stolen money, the newspaper said.

(*****
CB BLOWHARD

The July issue of Popular Communications magazine reports that a CBer in the Salem Oregon area has turned to broadcasting. The problem is that the broadcasting is taking place in the middle of the 27 MHz Class D, CB band.
Writing in his CB Scene column, Bill Sanders says that this latest CB bandit comes onto CB Channel 10 every Sunday evening around 7 PM local time. He offers no identification, and his transmissions consist of the operator pouring out his personal rage on all sorts of political matters. Bill says that the one way transmissions can continue for as long as 90 minutes with no time out for commercial breaks.
And late word into Newsline is that the FCC's Seattle office has now become involved in the case.

(*****
INTERFERENCE TO BREATHING MONITOR

A legally operating Texas citizens radio operator has been ordered off the air because the FCC cannot figure out what to do about his signal that's causing RFI to a neighbors infant monitor. The Dallas Office responded to a complaint that the CB radio station was believed to be a potential source of interference to an infant apnea breathing monitor. An infant apnea monitor is really nothing more than a cheepie one-way intercom operating in the 48 MHz band along with cordless telephones, childrens toy CB sets and two way wireless intercom sets.
Anyhow, it seems that the parents of the newborn relayed the fears to their physician that the neighbor's CB transmissions could desensitize the monitor so that it would fail to alarm if the baby stopped breathing. FCC investigators inspected the CB radio station to insure that no overpowered operation was present. Even though they found nothing wrong the FCC engineered unilaterally ordered the 11 meter CB station to cease operations until the agency can determine the monitor's desensitization susceptibility from its manufacturer.
At airtime its not known if the unidentified CB operator will be appealing the government order.

(*****
NEW ENFORCEMENT TOOL

The Federal Communications Commission has shown off a new vehicle equipped with two computers, a color printer, complete with a satellite receiver in the trunk. This car when driven

through cities and neighborhoods can detect unlicensed radio signals and signals that cause malicious interference.
By months end the FCC will have ten such cars, each installed with $75,000.00 worth of electronic equipment. The Commission would not say which field offices will get the first cars. The goal is to provide each Field Office with at least two of these cars.

(*****
REACT CONVENTION

REACT International's 1994 national convention is slated for July 18th to the 22nd at the Somerset New Jersey Radisson Hotel. The convention is being hosted by the Garden State Council of REACT teams.
For those of you not aware, REACT is a citizens radio group that used to operate primarily on the 27 Mhz Class D citizens band. While some CB operation is still a part of REACT, these days its members primarily uses General Mobile Radio Service frequencies to provide all sorts of public assistance. While a ham license is nor required for participation in REACT, many hams have joined the organization with some holding high ranking positions in its structure.
If you are a REACT member or interested in learning more about becoming a member, this is probably a gathering well worth attending.

(*****
NORM CHALFIN RETIRES

Our heartiest congratulations to our close friend and colleague here at Newsline, Dr. Norm Chalfin, K6PGX, on his retirement from the Jet Propulsion Lab on Tuesday June the 21st. In addition to his administering the Newsline support fund -- a fund that he created some fifteen years ago -- K6PGX has also worked closely with the folks at AMSAT to chronicle in photographs and slides much of the history of the organization and its numerous achievements.
To his family here at Newsline, he is a very special person. He showed up at a time that he was needed most, volunteered to find a way to help get support from the Amateur Radio community to keep the then Westlink Radio Network in production. He set up the support fund. He worked closely with attorney Bernard Heinz WA2BAK to walk us though our incorporation under the banner of the Holmsburg Amateur Radio Club. Norm also handled all of the paperwork when we changed our name to Newsline and even gave us use of his personal post office box in Pasadena -- an address that has become synonymous with the Newsline name.
We asked K6PGX what he plans to do now? Norm, who is a young eighty years old, says that he will stay with Newsline a bit longer -- at least until a new Support Fund Administrator can be

found. After that, who knows.
K6PGX has good health, a wonderful wife and family, and a lot
of time now, to enjoy it all.

(*****

And for this week, that's all from the Amateur Radio Newsline.
You can write to us at Post Office Box 463 in Pasadena,
California 91102.

NOT A pizza order is done in "plain langauge". 97.113(d) excludes
"codes and ciphers" which a pager code certainly is!

In article <2vldmh$dgs@search01.news.aol.com>, Wwhitby (wwhitby@aol.com) writes:

>Now on to my plan. Why can't we designate a portion of the HF SSB
>frequencies for no-code people. The test for the no-code HF frequencies

Better idea: Spend less time reading and posting to the newsgroups so
you can work on the code. Usenet gets you nowhere; the code will get
you on HF!

You might even consider watching a bit less TV to gain more code time.

JD> many years.
JD>
JD> Reason:
JD>
JD> Why advertise that you've got fence-able equipment in your car?
JD> ^^^^^^^^^^
JD> 73 de Jack, K9CUN

I occasionally go into pawn shops here in Tulsa and have yet to see a piece of Amateur gear in one. Lots of CB stuff, but no Ham gear. I don't know about pawn shops anywhere else, but here the Law is very specific about reporting daily to the Police anything sold or pawned to a pawn shop. I doubt there is much "hot" stuff sold to pawn shops. The money to be made is in the interest (39% APR for "loans" under $50) so why take a chance?

I've had call letter plates on my cars for 20 years. And the only time a radio was stolen was in 1973, BEFORE I had the plates. This was during the CB craze and the thief thought that was what he was stealing. The rig was a brand new Icom IC-230, one of the very first synthesized units. The radio had been installed about five weeks earlier. Upon discovering the theft, I looked in the phone book and called every CB shop in town and described the rig. My thinking was, the thief would not know what he had, and would try to find out from shops selling the stuff. BTW I gave $550 for it. The first synthesized rigs were dear and only covered 146-148 in 30 kc steps, but that beat buying crystals!

Sure enough, the very next day one of the CB shops called me with the license plate number of the thief. A ham friend, who is also a cop, arranged for frequent "drive bys" at the thief's house. Also discovered the thief's father was a local prominent attorney. A few judicious anonymous telephone calls plus the constant attention of the police caused the thief to turn up on my front porch the following Sunday

morning (four days after the theft) wanting to know if "I was the party who lost the ICON (thats what he called it)". The kid (maybe 18 years old) said he had obtained the radio from a "friend who had to leave town" and brought it into the his (the kid) employeers shop (a QUICK TRIP) and sold it to the kid for "$20". Upon inquiring how he (the kid) had found ME he reported the fellow had told him (the kid) the street name and approximate location and that he had gotten it out of a Lincoln Mark IV. My car was parked in the drive. So...he said he "just drove around until he found a Mark IV!"

When he first showed up, he said he didn't have the radio with him but "he would go get it if I promised not to prosecute him". I agreed. I made him leave me with his billfold while he went for the radio. When he came back I "traded" his billfold for the radio. I didn't offer to reimburse him for his $20, and he didn't ask for it. The 12V DC leads and the coax had been clipped with dikes. Since the leads hadn't been trimmed it was obvious that power had not been hooked up. The rig worked fine upon reinstallation.

On Monday I bought a burglar alarm.

Ohio/Penn DX Bulletin No. 166

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 166
BID: $OPDX.166
July 11, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, JH2PDS, SM0TXT, WB2RAJ, K4CEF, NW8F, VE1CBK and ZL2TT for the following DX information.

1A, SMOM. (The following is information excerpted from reports on Internet, and heavily editorialized by K4CEF.) There appears to be some sort of feud going on over the recent 1A0KM operation between the operators who went this past week, and those ops who have gone on all the previous operations and who were NOT present for this one. The problem seems to stem mostly from the fact that none of the latter group were invited to participate, and those in the latter group seem to be having a tough time understanding how the new group got permission to operate 24 hours a day without them etc etc. They have posted letters on Internet casting disparaging remarks about the integrity, friendship and honesty of the new group, and apparently trying to discredit them. It all appears that the old group just wants to keep the operation of 1A0KM to themselves, and to keep it on the rare list in order to have "their own country". I would imagine the primary aim here is to assure the continued flow of American dollars to the proper hands.-- de K4CEF

7Q, MALAWI. Peter, ON6TT, who is currently signing D2TT from Angola, will be active next weekend possibly signing 7Q7XT. He is scheduled to be there from July 17th through August 5th. Activity will be on all bands, but mainly on the WARC bands and the lower bands. QSL via ON5NT.

8P, BARBADOS. Mark, ex-J5UAI, is now active as 8P9HB. He plans to be active on all bands, CW, SSB and RTTY. QSL via NW8F.

A3, KINGDOM OF TONGA. Masa, JE1DXC, will be active from Tongatapu Island (IOTA OC-049), July 14-27th. His callsign has not been issued as of yet, but he plans to be active on CW/SSB on 40-10 meters, including the WARC bands. There may be some 75-80 meters. Masa would like to put an emphasis on 30 and 20 meters for the East coast and European operators.

QSL via CBA or the JARL Bureau.

CY0, SABLE ISLAND. Wayne, VE1CBK, informed OPDX that there will be a 50/50 chance he will be active as CY0SAB from July 18-22nd. Wayne will probably be active on all bands and he is hoping to take 6 meter gear with him. QSL to VE1CBK new address: Wayne King, 63 Brook St., Lake Fletcher, N.S., Canada B2T 1A5. (This is not in the CallBook!)

FR/T, TROMELIN. There was one report over the weekend that Jacques, FR5ZU, was heard on RTTY signing FR5ZU/T on 14084 kHz around 1630z. WFWL!

FT5, KERGUELEN ISLAND. Pierre, FT5XJ, was heard around 14085 kHz on RTTY between 1215 and 1245z. He is expected to leave the island sometime this month. Pierre will be gone for 3 months and then return. QSL via F5NLL or F1NLL in the callbook.

KH0, NORTHERN MARIANA ISLAND. Tosy, JA6VZB, is planning to be active as AH0T, from July 14-17th. His activity will actually be from Rota Island (IOTA OC-046). Look for him on all bands in CW/SSB and with a possibility of some RTTY operations. QSLs only via JA6BSM.

OH2C (SPECIAL CALL). The Radioclub of the Helsinki Telephone Company (OH2AQ) used this special call at Finnish Amateur Radio League station during the IARU HF Championship Contest this past weekend. The operators were OH2BCI, OH2BQW, OH2BVF and OH2NRV. QSL via OH1NRV.

S2, BANGLADESH. There was a rare appearance on July 5th, by both S21A and S21B. S21A was heard on 14168 kHz around 1430z and S21B was heard on 14196 kHz around 1450z. QSL both W4FRU.

S9, SAO TOME. Charlie, S92SS, continues to be very active. He has been heard lately on some of the WARC bands. Check 18087 or 10109 kHz around 2245z. If he is not there check 20 meters SSB between 2100 and 2300z. S92YL has also been active on 15 and 20 meters between 2030 and 2130z.

ST, SUDAN. Lou, ST0K, has been heard on 20 meters (around 14019) CW between 2230 and 0030z. He reports that his QSL Manager is Richard (WB2RAJ). Richard informs OPDX that he has not yet received the logs and is unsure (or clear) whether or not he is Lou's QSL Manager. Richard has heard from others sources that Lou wants him to be just a "mail drop". Richard has stated he will return all the cards to Lou and explain to Lou he will not be just a mail drop. As soon as Richard receives a correspondence (or logs) from ST0K or ST2AA, he will inform all of the situation.

ZK3, TOKELAU. Steve, AA6LF, who is currently active from North Cook Islands as ZK1ALF, will be active from ZK3-land, July 13-18. Most of his current activity has been on 20 meters between 0300 and 0700z. QSL via AA6LF.

ZL8, KERMADEC ISLAND (PIRATE!). Ron, ZL2TT (NZART DX Editor), informed OPDX that ZLs and VKs have been hearing activity by a station signing ZL8BX on 80 meters. There have also been reports of 40 meter activity

on the Ohio/Penn Network. This station states his home call is VK1QQ and that he is going to be on the island for 3 years. Ron was told by the New Zealand Radio Licencing, that they have not issued a ZL8BX call and that no one would ever spend three years on the island. The maximum stay on the island is one year. This is the second rare ZL call that has been used on CW in the last couple months. The last was ZL9RV on Campbell Island and this was also not genuine.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

To all the pro-ARRL pundits, this just proves what I've been saying
for three years now:

The ARRL does what is in the best interests of the ARRL, not what is
in the best interests of the amateur community.

As if there was ever any doubt to begin with.

412. Re: VHF & UHF in NYC Metro Area

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-10 21:39:13 UTC
From: ad52@merhaba.cc.columbia.edu
Message-ID: <2vppq1$lm8@apakabar.cc.columbia.edu>
Source record: 263764

Well, I hope the exam goes well, and welcome back to radio land. If you need to find an exam site in NYC, the tests (all of them, including commercial exams) are given on the second Friday of each month except July and August at Fiorello LaGuardia High School, 64th St. at Amsterdam Ave., Manhattan. Enter on the corner, and the test starts at 7:00 PM. Sept. 9 and Oct. 14 are the next two sessions.

I'm a member of Metroplex, which is a large, fun repeater group with all sorts of neat bells and whistles on their machines. The 2m machine is on 145.45(+), PL 141.3. In my radio's memory, I have a repeater on 147.090(+) that you should be able to pick up with your crystals. I have no idea where it is.

Other repeaters: 145.350 (Kennedy Airport) (-), PL 173.8 encode only; 147.240 (+), PL 94.8 encode and decode; 146.805 (-), PL 136.5 encode and decode. Also try listening around on 146.52 - a lot of people talk simplex, since the ham concentration in NYC is pretty high. The first repeater I listed (Kennedy Airport) has an ARES net on Monday nights at 8pm, and the Metroplex system has a swap net Sunday nights at 7:30pm.

As you notice, most repeaters here in the city now have PL (CTCSS) tones either on transmit, receive, or both, so you'll want to get a rig that can produce the tones, or your operating options will be very limited. The widespread use of PL tones is largely the result of tons of intermod and QRM around the high antennas in the city. Also, sadly, there are some jerks - it is New York, after all.

Okay, this post has gotten extremely long - I should have emailed it to you. Email me if you want more information, and I'll send along whatever I can. See you on the bands.

Nah. Those things, plus a good sub-zero weather Holofill (tm) sleeping bag
are essential survival items. You also need a watch, so you will know when
the camp cook has finished preparing dinner - unless you are roughing it
and eating freeze-dried meals.

The concept of self-testing, in any environment, is a clear conflict of interest.

Hams testing hams included.

I noticed in the glamorous, self-accolading article in the recent issue of QST on the VE system the ARRL conveniently forgot to mention the plethora of fradulent examinations which have been caught over the years.

And, as any law enforcement official will tell you: they only catch a small proportion of the actual crimes occuring.

Thus, one must wonder what the true rate of fraud is in the VE system.

Then again, does the League care? "Quantity before Quality" is their motto, after all!

Why must one be a ham to test a ham anyway? You don't need to be a GROL holder to test for the commercial examinations.

Before all you knee-jerk ARRL bashers make more of these predictable posts, let's remember that it is very easy to spit on the League, knowing that they do not have time to respond here to everything that is heaped on them. We have one side of the story, we don't have the letter to which the original poster was responding and we don't know the history of the affair.

What would be useful to many of us is to have a summary of the findings of this committee during its 4+ years of work. If it turns out that the ARRL is deliberately suppressing convincing evidence that is detrimental to amateur radio, I will be among those to complain. I'm not going to do it on the basis of one person's version of the situation, though.

Can we try to be a little grown up about it?

420. Wanted: Skeds during Perseids

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 00:01:46 UTC
From: Brian Hammill <brianh@exide.com>
Message-ID: <2vuvv6$sn0@dante.exide.com>
Source record: 263788

I had so much fun running a sked during last year's Persieds meteor shower. I want to try several this year.

The peak for the Perseids this year is predicted for sometime between 100Z and 1300Z on August 12. That is between 9:00PM August 11 and 9:00AM August 12 on the East Coast. The peak time visually is not always the best time for radio propagation.

I would like to try skeds starting the morning of August 10 around 1000Z (6:00AM EST) with anybody who has 2 meter SSB capibility of at least 50 watts and a reasonable (10 foot boom or longer) Yagi antenna that can be pointed toward central North Carolina, grid FM05. The best chances for QSO's will be with states along the Mississippi and in the 800 to 2000 KM range. I'd be interested in hearing from you if you are located in Arkansas, Missouri, Texas, Oklahoma, Illinois, Wisconsin, Indiana, Ohio, Michigan, and even Kansas and the Dakotas. I'll be glad to teach you what I know about meteor scatter. You don't have to have experience, just patience and the ability to hold a 30 minute sked with me. If we don't make it the first morning, we can try again. With E-mail we can chat about what we heard and make plans.

I have 150 watts running into an M^2 12 element 19.5 foot yagi antenna. I completed a meteor sked from FM05 to EN44 (Wisconsin) last year. I'm looking to add to my grid square totals and have more fun this year.

If you are interested, please send me E-mail. I may have to pick the best and early responders if I get too many replies. I estimate having time for between 4 and 8 skeds during this year's Perseids.

Brian

From: Rick Zabrodski <zabrodsk@med.ucalgary.ca>
Subject: EMF and Ham Radio Operators
To: elecromagnetic forum <EMFLDS-L@UBVM.CC.BUFFALO.EDU>
Cc: qrp forum <qrp@Think.COM>

The following text is a proposed techinical paper for the upcoming
Canadian Amateur Radio Convention. The talk will be given to individuals
with extremely varied techinical background and minimal medical or
scientific background. Comments appreciated!

HAM RADIO: HAZARDOUS TO YOUR HEALTH? RAC CONVENTION 1994

Dr Rick Zabrodski M.D.

Over the past 10 years the general public has become increasingly concerned about electromagnetic fields (EMF) and their possible effects on the human body. There have been numerous articles in the press linking electric power lines and other electrical equipment such as cellular phones to cancer in particular.
After reviewing the currently available data my conclusion is that if there is a serious health hazard for the ham radio hobbyist, it is a relatively small one. At present it appears
that EMF and its effect on the typical ham radio operator is not likely to be a major problem. This is apparent when comparing EMF to the many well known, documented hazards that we subject ourselves to on a daily basis. This does not mean however, that there are no concerns with EMF exposure and further study together with "prudent avoidance" is advised. I will present a brief summary of what is currently known on this incredibly complex and rapidly expanding area of research. A rationale for appropriate, prudent behavior based on this knowledge will then be presented.
To better understand the issues involved in EMF, we must first define what particular areas are relevant to the hobby of Ham Radio. EMF is usually divided broadly into two

categories, Ionizing and Non Ionizing. Ionizing radiation includes frequencies from the ultraviolet spectrum and up. Examples include solar radiation, x-rays and nuclear explosions. The serious side effects of ionizing radiation are well known and depend on frequency, intensity and duration of exposure. Based on this knowledge, there are currently specific public and occupational exposure standards (e.g. x-ray technicians, nuclear plant employees). Fortunately, your transmitter does not emit any ionizing radiation!

The second area of EMF more relevant to amateur radio are those frequencies in the "non-ionizing" spectrum. This spectrum stretches from very low frequencies to the infra-red region. Examples include power lines, transformers, electric motors and radio frequencies stretching from VLF through microwaves. Non-ionizing EMF is further subdivided as thermal or athermal. This refers to the measurement of actual tissue heating. The issue here is that of wave length and intensity. For example, we know that we can use relatively low power microwaves to cook food and low power infrared lasers to burn tissue.

However if an individual was situated near a high power (megawatt) mf/hf/vhf antenna biological heating (thermal effects) would also be evident. The ANSI guidelines have suggested limits for public and occupational exposure in this area. It should be noted that these limits have been repeatedly lowered over the years. They remain a source for continued debate.

For our purposes, the main consideration in amateur radio is usually that of lower level radio frequencies that do not cause measurable heating to the body and are therefore classified as athermal. It should be pointed out that currently there are no published scientific safety standards for power levels and frequencies that do not cause thermal effects. This is where most of the controversy begins! There is still not enough scientific evidence to define clearly what is going on here. Despite this we hear emotional statements from concerned citizens' groups and the equally polarized public relations statements of profit oriented multinational corporations. The implication for various self interest groups including amateur radio is tremendous. If a case for a cause and effect health hazard can be made, the cost implications will be enormous. If you think antenna restrictions are a problem, consider the implications of having to prove that you have a EMF compliant radio station!

A wide variety of scientific investigations from numerous sources now show that there clearly are measurable biological effects secondary to athermal EMF. In examining these effects, the following hierarchy of biological functioning has been examined:

Free radicals
Cellular
Tissue
Organ system
Whole organism
Populations

To complicate things even more, research done at the cellular and tissue level suggests that other factors besides frequency and intensity are important. The EMF modulation, bandwidth and pulsatile vrs steady state characteristics have all been shown to have different effects. It is apparent that certain EMF "windows" may be more important than others.

What are some of these effects? At the cellular level we know that EMF causes measurable changes with calcium and hydrogen ions. There appears to be changes in cellular communications by way of electrochemical and enzyme pathways. These effects have been studied particularly in immune cell function (T-cells) as well as cell growth and

other types of cell recognition systems. At a tissue and organ level, we now have evidence that the brain hormone melatonin, is also effected. All the above are certainly interesting to the Ph.D. biologist, but how do they affect you and me?

The current literature suggests that EMF likely does not cause cancer. However, it may have a role as a promoter (enhancer) of cancer by modifying the cells in the immune system that normally act to prevent or correct cancer in its early stages. In other words, cancer cells may be created by a chemical agent or ionizing radiation. Subsequently the EMF handicapped immune system may not be as effective in identifying and destroying these cells in time to prevent further cancer cell growth.

At the other end of the cellular spectrum are the "groups of organisms" that we call a population. The study of populations and relationships with disease is called Epidemiology. The often quoted study of 67,829 male, mainly Californian Hams in the 1980's suggested a small increase in several types of cancers.

Several points should be noted about this study. First, there was a reported decreased incidence in certain other cancers. Furthermore, these Hams did not die any sooner than would be anticipated for anyone else. It was also pointed out that one third of these amateur radio operators had occupational electromagnetic exposure together with possible exposure to other potential hazards including solder fumes and toxic chemicals. This study and many others like it did not involve any actual measurement of cumulative EMF exposure, only that such exposures were likely to occur. What about the effects of EMF on female hams who live in Iowa? Often epidemiological studies give rise to more questions rather than answers! Some subsequent epiemilogical studies involving occupational exposures (generally much higher than hobby exposures) to EMF tend to support the atypical cancer findings initially described. These individuals were usually exposed to numerous other agents and it appears that chemical exposure was particularly important. What we can say about the "silent key" study is that there is an apparent relationship of still uncertain significance but certainly there is no proof of a cause and effect relationship with cancer.

Therefore, we now know that non ionizing, athermal, low level radiowaves used in amateur radio do cause biological changes in the human body that are measurable at the cellular, tissue, and organ system level. The significance, if any, of these changes remains uncertain. It currently appears unlikely that these changes can be directly linked to causing cancer. Unfortunately there does remain the possibility that they have a small but not yet clearly defined role in allowing other more toxic agents to cause cancer by promoting or enhancing their effects. Other effects may exist, both good and bad, that are yet to be described. I believe that it will ultimately be in this area of biological rather than epidemiological research where we find the definitive answer to our questions. At the same time we may also develop a better understanding of cancer and immunological diseases such as arthritis and AIDS.

When we look at the scientific evidence at the organism and population level, the possible link between cause and effect concerning EMF and disease continues to be poorly understood. Nonetheless, there remains evidence for concern, particularly in those individuals with significant exposure to EMF and other potential cancer causing agents in their occupations. More study in this area is also indicated!

Considering the above information, it may be considered wise to practice what has been called "prudent avoidance." As a ham radio-physician, here is my advice:

Don't smoke
Don't get fat
Eat sensibly
Exercise regularly
Wear a seatbelt
Wear a bicycle helmet
Climb your tower on sunny, windless days and use a proper belt

Paying attention to the above issues will provide a clear, measurable and significant benefit
to your long term health. With the above duly noted, what about ham radio and EMF?
First, we must recognize that the ANSI guidelines are based on THERMAL guidelines. Furthermore, they do not take into account the modulation dependent interactions that seem to be important in athermal EMF research. In fact, there are no guidelines for ham radio type exposure to EMF at the present time. However, I certainly would agree with the following:

QRP : Use the lowest possible power as conditions permit.

This is particularly important with the higher frequencies and in situations where the antenna is close to the operator. The use of UHF/VHF handhelds would ideally involve a separate microphone with the radio and antenna held above your head. If this is not possible, the handheld should be kept as vertical as possible using low power and brief transmissions. (Leave the long winded lectures to 75 metre AM.)
When operating HF at levels of 100 watts or less, beams should be kept at least 35 feet above the ground and higher when using more power. On a typical suburban lot a vertical should be roof mounted. (They usually work better up there in the clear anyway). Any indoor antennas should be restricted for QRP use only.
Finally, your linear should be reserved for "true emergencies" such as working 3Y0PI on the last day of the Dxpedetion as a "new one" for the DX honor role. I would emphasize that special care is required when operating at microwave levels as the chance of significant athermal and thermal exposure is much higher. Further, more detailed suggestions can be found in various sources including the ARRL Handbook and the ARRL Antenna Book.
In summary, we now know that non-ionizing, low level, athermal EMF does cause measurable biological effects. The consequences of these findings are yet to be accurately assessed but further information will be forthcoming. Those at highest potential risk are individuals with prolonged occupational exposure to EMF and have additional exposure to other potentially toxic agents. Although further study is needed, it appears that the risk involved with ham radio EMF exposure remains low when compared to other established health risks. "Prudent avoidance" is recommended.
I hope this encourages all of you to quit smoking, eat smart and exercise safely. These measures together with prudent QRP operation and high antennas will hopefully allow us all to discuss this topic again for many years to come!

>Yes, that is precisely what they do....

Well, not really:

>What defines an "authoritative body" after all? In the case of an applicant
>for a pilot certificate, the checkride will be given either by one of
>
>(1) An FAA examiner/employee, who gets his job qualification from being
> an experienced pilot and instructor.

So he's certified by the FAA, not by just a pilot's organization similar to the amateur's ARRL.

>(2) An FAA designated examiner, who also gets his job qualification from
> being an experienced pilot and instructor. He doesn't work directly
> for the FAA, yet his job depends on their scrutiny of his actions.

Again, he's certified by the FAA, not by just a pilot's organization similar to the amateur's ARRL.

Who administers the pilot's written exam? My ground school instructor administered my written; he was certified by the FAA, not by just a pilot's organization similar to the amateur's ARRL.

>

Sorry, but the answer to your questions is that it's not possible to
mod those radios. One of the reasons for their good reputation for not
suffering from intermod problems is their tight front-end. That tight
front-end also prevents modifying the radios to work out-of-band.

Its been stated here before that the ARRL has a "no bad news" policy
of publishing articles in QST.

A fellow ham in RI wrote a letter questioning statements made by K1ZZ
in a recent editoral. He mailed over 2 dozen copies to all the League
officers, division directors, and miscellaneous people (letters editor,
etc.)

Of the 26 letters he mailed out, two division directors: Northwest
and Southwest, bothered to even send him a reply.

The League: We care about your opinions. Not.

Less populated areas have it better. All you have to do is go to the courthouse and ask. It's public information. In rural areas, they sometimes publish a book, similar to a small phonebook, that is listed by license number.

SB SAREX @ AMSAT $STS-65.003
SAREX Status 7/11 at 2:30 UTC

Silver Spring, MD, July 11 1994 at 2:30 UTC

The Shuttle Amateur Radio Experiment (SAREX) packet robot was activated today. Several stationsmade packet connects immediately after activation. At present, at least 84 packet connects have been confirmed. The SAREX packet callsign is W5RRR-1. The uplink frequency is 144.49 MHz and the downlink is 145.55 MHz.

At 2/1:33 MET (18:16 UTC) the Sacred Hearts Academy in Honolulu, Hawaii had a 4 minute school group pass with the Space Shuttle Columbia. 8 students talked to STS-65 Mission Commander Bob Cabana, KC5HBV.

The official element set for today is JSC-006. This element set was provided courtesy of Gil Carman, WA5NOM, from the JSC ARC.

I find this interesting but not surprising. So the ARRL is now in the same boat as tobacco companies. Hmm... makes me wonder if I'll renew in November.

Funny you should mention that. Ever seen anything in QST that could be
considered truly critical of the ARRL? Never! They're so self-serving that
it's sickening.

Now TWICE as many outdoor Tailgate spaces are available...

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS

FLEA all SUMMER at MIT
July 17th, 1994
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $2 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
tailgate area is available for all sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Sponsors: MIT Electronics Research Society
MIT UHF Repeater Association (W1XM)
MIT Radio Society (W1MX)
Harvard Wireless Club (W1AF)

The 3-Hr Ap Indices for 09 JUL 94 are: 7 5 2 5 7 11 10 6
Greater than 2 MeV Electron Fluence for 10 JUL is: 1.3E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Region 7746 (N12W30)
decayed slightly in white light over the past 24 hours. The
region displays three nearly-equal penumbral areas with the
trailer polarity between the two larger and darker penumbral
areas. Region 7749 (S08W39) had some growth this period. 7749
accounted for two B-class/SF flares with the largest, a B7,
occurring at 10/0342Z. Six other uncorrelated weak B-class

x-ray events were reported at various times throughout the period. No other significant activity was reported. Three new regions were numbered this period. Region 7750 (S16W40) and Region 7751 (S12E57) emerged as BXO beta groups. Region 7752 (N21W01) appeared as a faint two-spot AXX group but since its numbering, has decayed to a small, compact area of plage.

Solar activity forecast: solar activity is expected to be low. Despite its slight decay, Region 7746 still displays good potential for C-class and possible M-class activity. Another area with good C and possible M-class potential is the two region complex 7749 and 7750. Their close proximity could produce significant activity.

The geomagnetic field has been at quiet levels for the past 24 hours. The GT 2 mev energetic electron flux was at normal to moderate levels.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next 3 days.

Event probabilities 11 jul-13 jul

Class M 10/15/15
Class X 01/05/05
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 11 jul-13 jul

A. Middle Latitudes
Active 20/30/30
Minor Storm 05/10/15
Major-Severe Storm 01/05/05

B. High Latitudes
Active 20/30/30
Minor Storm 10/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions. A mild enhancement of geomagnetic activity on 12 and 13 July could produce minor signal degradation on transauroral circuits, although nothing significant is expected.

1845 1857 1905 B4.5 SF 7749 S10W25 III,V

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Isnip]

Instead of the blow by blow why not puplish your opinions here,
even as an average citizen? I'm more interested in your findings
than in the "who said what to whom and when" dialogue.

I've had some concern about this issue from computers (my field), and
have taken (I think) prudent steps to reduce exposure until we know
for sure about the danger. Perhaps the ARRL is afraid of tarring
the hobby "unsafe". I'd say hang-gliding could be classified as
"unsafe" as well. But folks still do it, and knowing the danger
(or potential danger) is part of informed participation.
What do you have for us?

Barnaby AA1IB barnaby@world.std.com

434. TOWERS AND GUYS...

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 04:31:20 UTC
From: dj1@vax1.mankato.msus.edu
Message-ID: <1994Jul10.233121.7553@vax1.mankato.msus.edu>
Source record: 263638

Hello,

I have just aquired about 85 feet of tower and am anxious to get it up,
but I need to ask a few questions first....

1) What is the recommended placement of the guy wires? Something
along the lines of 45%, 75%, and 100%?

2) What is the recommended number or guys per foot? I know this and
the previous question also relate to windloading, but at this
point I am looking for general starter guides.

3) What is the maximum height before the FAA must be notified?
I am NOT near any airports.

4) What is the maximum height I can go without needing a light?

5) Anything else that I am forgetting and needing to know?

Thanks for your help.... you can E-mail to the following address...

Sean / N0PBA DJ1 @ VAX1.MANKATO.MSUS.EDU

C>Hi Matt, I have a hypothetical question for you. What would you do if
C>you tried for hundreds of hours to learn to receive Morse code at 13
C>wpm and just could not do it? I can force my brain to function as a
C>modem but I know somebody who cannot, and he is otherwise a very
C>knowledgable, intelligent person and an asset to the ham community.

Ive been at the code for a very long time, and I cant put certian
charachters together during copying. Maybe a learning disability. So I
passed my Tech.

I'm very in the know about radio, having worked in Commercial radio for
several years.

The code should be removed from the licensing requirements. Period.
There is no need to make good radiomen suffer, and...compliance with the
ITU is voluntary, not mandatory.

Flame on.

439. WANTED: KWD TS-440 Repair Advice

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 05:31:22 UTC
From: jnavary@nyx10.cs.du.edu
Message-ID: <2vqlfa$dbv@nyx10.cs.du.edu>
Source record: 263637

For some unknown reason the main tuning knob on my TS-440 has
"frozen" to the point where it will not turn at all. It was not
due to lack of use -- it just gradually bogged down over the
course of an hour or so and won't budge.

I removed the knob from the shaft and the shaft itself is
what has seized up - nothing to do with the friction ring on the
knob.

Anyone have any ideas?

If not, a secondary question: Does anyone have any tips
on where to send the rig for repairs? The last couple of times I've had
to send rigs off for work I've been very disappointed with the
extensive time it took for them to even start working on it.
I'd like to find a repair source that is not normally backlogged
for *months* -- and, of course with qualified technicians and
reasonable charges.

If you can help with any of this please send email to

jnavary@nyx.cs.du.edu

Thanks,

Jim Navary

Gosh Alan, too much coffee this morning? The airline pilot example
is what happened to me - I wanted to be an pilot but my eyesight
prevented me from entering that field. So I accepted my limitation.

While studying for your license please take the time to also study
the history of radio; that might help explain why code is held in
such high regard even today.

Followups to .policy!

INTERESTED IN STS-65 SHUTTLE TRANSMISSIONS
The Goddard Amateur Radio Club (GARC) invites interested people to tune in to
STS-65 shuttle ground communications transmissions. As a public service to the
Amateur radio community, the GARC retransmits space shuttle air-to-ground
communications. During the STS-65 mission which also carries a Shuttle
Amateur Radio Experiment (SAREX), Amateur radio operators, shortwave listeners,
and individuals with scanners can listen to these communications on the
following HF (single sideband) and VHF (FM) frequencies:

3.860 MHz (lower sideband)
7.186 MHz (lower sideband)
14.295 MHz (upper sideband)
21.395 MHz (upper sideband)
28.650 MHz (upper sideband)
147.45 MHz (FM) in local Washington D.C. metro area

As previous posts have indicated STS-65 also carries SAREX.

Packet Radio
Callsign: W5RRR-1

Freqs: All operations in split mode. Do NOT transmit
on the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (worldwide)
Uplinks: 144.91,144.95,144.97,144.99 MHz

Crew will not favor any specific frequency

Packet Freq: Downlink: 145.55 MHz

>of the 3 varieties, Ringo, Ringo Ranger or Ringo Ranger II should I
>plunk my money down for? Is the RR II that much better than the RR in
>terms of gain and bandwidth?

Alas, the Ringo is popular because it is cheap, not because it is good.
It will show an excellent VSWR bandwidth, but so does a dummy load.
What it won't offer is a clean pattern, gain comensurate with it's size,
or reasonable longevity. A Comet or Diamond will be better, even a J-pole
will be better than the basic Ringo. About the only antenna that is worse
than a Ringo is a Cushcraft 4-pole (fah, a piece of junk). Short of buying
a Cellwave antenna (mucho $$$), a Comet or Diamond will give the best bang
for the buck. (Note you can *build* a Comet or Diamond type antenna fairly
easily and cheaply. That really gives the best bang for the buck.)

A note on VSWR bandwidth. Any *simple* monopole antenna that has a
2:1 VSWR bandwidth over greater than 2 MHz at 2 meters has something wrong
with it, like horrible efficiency. (Measurement interpretation errors
can fool you here. If the coax has greater than 5 db of loss, you'll
never see greater than 2:1 VSWR at the transmitter, even if the antenna
is shorted or open.) More complex antenna designs *can* have greater
bandwidth and still retain efficiency (log colinear stacks, log periodic
yagis, bowties, etc), but only if the implementation of the design is good.

Gary

449. Transmission problem (video over symmetric cable)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 12:28:01 UTC
From: KOOIJMAN@TUDOBM.TUDelft.NL
Message-ID: <Csrzyq.FJD@news.tudelft.nl>
Source record: 263651

Hello all.

This is propably not the right group, but what is ?

I would like to connect a video camera (monitoring a robot)
to a monitor in another room using the standard (UTP) cabling
and patchboards available in the building.
I think this is really a transmission problem: converting
75 ohm asymetric to xxx Ohm symmetric.

I do not know or the quality of the UTP cabling is good for this
purpose. I don't know the impedance.

Any ideas are welcome.

Well, sorry you're so cynical about a system that's been working and working well for 10 years. Have you ever actually been a VE? I am, and I know that the vast majority are honest and care about what they do.

And don't forget that even the FCC isn't beyond "selling licenses," -- remember the callsign fiasco a number of years ago? ANY testing system can have bad apples in it. Instead of advocating trashing the whole system, why not join it and work inside it to make sure it's honest? It's not going to change anytime soon.

Binding, yes. Never said the USA doesn't have any clout, and the
subject may well come up at the next WARC meeting in '97 (I think it
is). But the FCC has shown no inclination to change the code
requirement, either, so who knows what will happen then.

>
>In New York anyone can go to the DMV office where you pay parking
>tickets and stand on line to get the name and address for any plate,

In every state I'm aware of, you can get name and address info from a plate;
that's why they're on the car! Ownership of vehicles PRIVILEGED to use
public roads is public record. (Rebut this aspect in nj.politics, NOT HERE!)

Sure, the thieves will look for amateur gear in the vehicles and homes of
the owners of cars with call plates - and drugs in the cars & homes of doctors
with MD plates, and valuables in the homes of anyone who broadcasts their
profession on a vanity plate, or anyone that rudely passed their cool
(stolen?) car on the Parkway on the way to the shore, embarrassing them
in front of their new best friends...

Point is, there are floatey things in every bowl of soup; you can chew on
the greens and complain how bitter it is, or you can recognize they're
there, strain them out, and enjoy the broth. Call plates are no more or less
inviting, IMO, than anything else to your average reprobate. (You think
they don't know what a cell phone antenna looks like?) If they want
you, they'll make an effort to get you.

"Paranoia strikes deep. / Into your life it will creep. / It starts when
you're always afraid..." - Buffalo Springfield

In my experience, I've had to EXPLAIN my plate to most people. (NJ just
modified the law so new plates will say AMATEUR RADIO. They didn't before.)
Anyone who makes an effort to find out what they mean will become either a
ham or a thief? Methinks not. I have too much faith in human nature.
MOST PEOPLE (read "good, decent, honest, hard-workin', God-fearin' folks with
a semblence of manners and a sense of morality who'd love to chat, but have
things to do") just "Oh, how cute" the whole subject.

I'm leaving my call plates on; as another post mentions, they are great PR.

>The concept of self-testing, in any environment, is a clear conflict of
>interest. Hams testing hams included.

hams are probably the hardest on themselves .. of course there were those in the days of the conditional willing to sell out amateur radio so it's not a new problem.

>I noticed in the glamorous, self-accolading article in the recent issue
>of QST on the VE system the ARRL conveniently forgot to mention the
>plethora of fradulent examinations which have been caught over the
>years.

10 years + operations...certainly worth a pat on the back, i would say. now, how do you define plethora or did you just find that in your Roget's? It's always been expected that there would be cheating in the system from time to time - it even happened with the FCC running the show. you're assuming a lot of coverage = a lot of events. see OJ Simpson for another example - only 1 guy on trial but you'd think they'd finally caught the Indianapolis 500!

>Thus, one must wonder what the true rate of fraud is in the VE system.

i suspect you could ask the VECs to tell you...i would think it's low.

>Then again, does the League care? "Quantity before Quality" is their
>motto, after all!

actually i think you have it wrong. one big thing that helps keep the VE system honest is the public notice requirements -- wish it was a bit more stringent that just getting on the repeater 5 min before a test and "announcing" it. the ARRL certainly tries to shout from the rooftops where the sessions are -- i would think the other VEC groups would collaborate and do something similar (and it appears the ARRL/VEC would include their info in their news blasts) but they don't seem to do that.

remember back in 84 you had to have everyone preregister in advance of the exam?

>Why must one be a ham to test a ham anyway? You don't need to be a
>GROL holder to test for the commercial examinations.

i dunno...new beer, new rules, i guess. certainly not all the FCC people running the amateur exams would be licensed hams. believe the thinking is that overall hams are interested in looking out for their best interest and we were willing to belly up the bar and take on the job. there's a guy locally that's a GROL admin but as far as i know there's been only 1 test and others are begging for more to be held. (i think there's 6 here at work alone..)

>Does any one has production information (spec) for Kenwood TH-79A? It
>should replace TH-78A. Radio Center (Kansas City) gave me a $469 quote.

I believe the model is TH-72(a?). It is the dual-band version of
the TH22 and TH42. I tried it out at the store, it's nice. Thinner
than the 78A.

Supplied battery is 6V 600mah, power out 3W. Don't know what RX
range is.

457. My List of Mail Order Electronics Companies

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 13:33:09 UTC
From: jfw@ksr.com
Message-ID: <2vrhml$d97@hopscotch.ksr.com>
Source record: 263667
Cross-posted to: sci.electronics,rec.radio.amateur.homebrew,rec.radio.amateur.misc,rec.radio.info

A long-delayed update, as usual :-).

[$Revision: 2.17 $; last updated July 11, 1994]
[Author: John Woods, WB7EEL, jfw@ksr.com, jfw@jfwhome.funhouse.com]

Here is my list of companies which will sell electronic components in small quantities. Many of these places I have bought from, several I haven't. Being a ham radio operator, I am most interested in RF components, and in particular, air variable capacitors, which tend to be scarce (and tend to be used or surplus even if I've otherwise labelled the seller as "NEW").

Categories are:
NEW COMPONENTS Distributors and sellers of new components, or "new and some used" in a couple of cases.
SURPLUS ELECTRONICS Usually overstocks, occasionally used equipment. Ideal for stocking the junkbox, usually have dependable stock lines of resistors, capacitors, and some semiconductors, but won't have those LCD modules forever... An invaluable resource, don't shy away from them.
SPECIALTY COMPONENTS In particular, crystals and toroidal cores.
KITS Ham radio kits, random electronic kits, whatever they have.
LITTLE GUYS Separated out because of some twisted sentimentality, I suppose. Intended to honor one or two ham spare-bedroom operations. Note that sending $1 along with catalog requests is a big help for these folks.
PUBLICATIONS A small selection of publications dealing with electronics, especially RF electronics.
QRP CLUB PUBLICATIONS Clubs for low-power amateur radio enthusiasts; frequently have publications with quite a bit of technical content (which is why I'm a member of QRP clubs headquartered thousands of miles from where I live :-). Note, this is generally practical technical content (how to build it) rather than theoretical technical content (why it works), but definitely more than Contester's Quarterly.

Note on shipping costs: I don't always update these frequently enough, and they're generally for continental US unless otherwise mentioned.

NEW COMPONENTS:

Digi-Key
701 Brooks Ave. South
P.O.Box 677
Thief River Falls, MN 56701-0677
+1-800-DIGI-KEY (334-4539)

+1-218-681-3380 (FAX)
No minimum, $5 handling under $25, free and very complete catalog, very nice indeed. Prices aren't always the best, but rarely excessive. Weak on RF specialty parts (though they now have the ever-popular NE602AN), but they do have blue LEDs.

Mouser Electronics Mouser Electronics Mouser Electronics
11433 Woodside Ave. 2401 Highway 287 North 12 Emery Ave.
Santee CA 92071 Mansfield TX 76063 Randolf NJ 07869
Mouser Electronics
370 Tomkins Court
Gilroy CA 95020
Catalog Subscriptions: (800) 992-9943 (Continental US only)
Sales & Service: (800) 34-MOUSER (800-346-6873) (US, Puerto R., Canada)
Very complete catalog of brand-new components (though no air variables). Usually quick service, $20 "minimum" ($5 charge under $20). When ordering, you may want to be sure to ask about availability and shipping locations; they have several warehouses, and frequently orders will get sent from several warehouses (which drives up the shipping costs). Export orders have a $100 minimum, except for Canada and Mexico.

Ocean State Electronics
P.O. Box 1458
Westerly RI 02891
+1-800-866-6626 (orders)
+1-401-596-3080
+1-401-596-3590 (FAX)
Minimum $5, S&H $4, free catalog. Wide array of RF parts, especially air variables and B&W coils.

Radiokit (store is located at:)
P.O.Box 973 169 Jeremy Hill Rd.
Pelham NH 03076 Pelham NH 03076
+1-603-635-2235
+1-603-635-2943 (FAX)
No minimum ($3 service charge if under $20), many kits, lots of J. W. Miller chokes & coils, B&W coils, RF switches, Millen variable capacitors, lots of parts in general. As of 24-Feb-94, they are again STILL out of catalogs, and just barely might have one by Dayton this year. They do accept mail orders, but you'll have to call for prices and availability. A classified ad in 3/94 QST says "Call/SASE", I guess they may have fliers.

Circuit Specialists Inc
P. O. Box 3047
Scottsdale AZ 85271-3047
+1-800-528-1417
No minimum with check or money order, $15 otherwise. $3 S&H.
New electronics, good RF assortment, increasing infestation of computers.

Active Electronics
11 Cummings Park 237 Hymus Blvd
Woburn MA 01801 Pointe Claire, Quebec, H9R 5C7

+1-800-677-8899 (Main number for US and Canada)
+1-514-630-7410 (International)
+1-514-697-8112 (FAX)
$25 minimum, $5 S&H UPS, catalog has a "$10 Suggested retail price" but they sent mine for free. They have 7(?) stores in the US (Chicago IL; Baltimore MD; Woburn MA; Detroit MI; Mt. Laurel NJ; Long Island NY; Seattle WA) and 10 stores in Canada (Quebec City; Montreal (2); Ottawa; Mississuaga; Winnipeg; Calgary; Toronto; Edmonton; Vancouver BC). Each store has its own 800 number and FAX number, call the main number(s). International orders are to be mailed to the Canadian address, but they want payment in US funds! Lots of stuff, oriented more toward supplying last-minute requirements of companies than hobbyists, but perfectly happy to take your money in small doses (stores have no minimum order). The $25 minimum for certain items is no longer explicit, but they note that some items will "ship in factory minimum package quantities", which might be worse.

Maplin Electronics Ltd.,
P.O. Box 3,
Rayleigh,
Essex,
SS6 8LR
U.K.
Phone numbers: your international code +44 702 554161 for sales
+44 702 553935 Fax
+44 702 556001 Tech enquiries(2-4pmGMT)
"Over here [in the United Kingdom] the main hobbyist electronics supplier is Maplin Electronics who stock a wide variety of equipment. They have a catalogue which can be shipped for 10.65 pounds sterling by air or 5.50 pounds sterling by surface mail. They accept Mastercard, American Express and International Reply Coupons. They have at least one type of air-filled variable capacitor!" (Thanks to Kev White at Cambridge University).

Newark Electronics
Send catalog requests to:
Newark Electronics
ATTENTION CATALOG DEPARTMENT
4801 N. Ravenswood Ave.
Chicago IL 60640-4496
+1-312-784-5100
They don't have a single mail address or phone; instead, one is supposed to call the closest of three pages worth of branch offices. I don't feel like typing in the entire list (it's copyrighted, anyway :-), so send email for your "local" distributor, or call their administrative offices at the number above. They have a $25 minimum order; they are a Real Distributor, but accept small orders (over the minimum, of course). Their catalog currently 1488 pages; they are very complete (except, of course, for my favorite scarce item, the air-variable capacitor). Note that the catalog prices tend not to match reality all that often, so order by phone rather than by mail; prices tend to be higher than other places, but they have a lot of things that are hard to find from other outlets. Also note that they have six Canadian offices, and one UK office, and will take international orders

at 500 N. Pulaski St., Chicago IL 60624-1019, +1-312-784-5100
(FAX +1-312-638-7652, TLX 6718690 NEWARK U).

Arrow Electronics, Inc. Catalog requests to:
Catalog Division Catalog Division
1860 Smithtown Ave. 25 Hub Drive
Ronkonkoma NY 11779 Melville NY 11747-9828
+1-800-93-ARROW
Minimum $25; they no longer have a catalog. They are a Real Distributor,
but also didn't mind my placing a personal order (a couple of years ago).

MCM Electronics
650 Congress Park Drive
Centerville OH 45459-4072
+1-800-543-4330
+1-800-824-TECH (product questions)
+1-513-434-6959 (FAX)
Minimum $20 ($25 for charge cards, and they don't take personal checks),
handling $1.95 + shipping. Oriented toward repair technicians, really
heavy on VCR parts and somewhat overpriced doodads, lots of useful stuff
not easily found elsewhere.

Fordham Radio Supply
260 Motor Parkway
Hauppauge NY 11788-5134
+1-800-695-4848
Tools for technicians. One or two items are not outrageously overpriced.

Jameco
1355 Shoreway Road
Belmost CA 94002
+1-800-831-4242
+1-800-237-6948 (FAX)
+1-415-592-8097
No longer have a minimum order, reasonable selection of parts again (in
addition to computer components).

JDR Microdevices Just moved!
1850 South 10th Street
San Jose CA 95122-4108
Orders: +1-800-538-5000
+1-408-494-1400
FAX: +1-800-538-5005
+1-408-494-1420
Cust. Service: +1-800-538-5001
Tech Support: +1-800-538-5002
BBS: +1-408-494-1430
No minimum, $5+ shipping. Mostly computers now, but they haven't yet
decided to abandon components; indeed, they recently dropped their minimum
order requirement entirely.

Johnson Shop Products
P.O.Box 160113
Cupertino CA 95016
+1-408-257-8614
+1-408-253-6288 (FAX)
Catalog $1. No minimum. Shipping charge is based on UPS; very small orders that can be sensibly shipped in a first-class letter, include money for first-class postage. New and some used electronic parts.

DC Electronics
P. O. Box 3203
Scottsdale AZ 85271-3203
+1-800-423-0070 (orders)
+1-602-945-7736 (stock/price checks)
+1-602-994-1707 (FAX)
$15 minimum charge order, no minimum for checks, $3 min. shipping&handling. Wide array of ICs, good assortment of electronic components.

EasyTech Inc *** out of business? ***
2917 Bayview Drive
Fremont CA 94538-9932
11 May 93: "EasyTech no longer has an 800 number, and has dropped several lines. The last time I called them (2 months ago), I got the impression they were slowly going down the tubes..." - dts@banyan.com "Both of their 800 number and the customer services numbers are disconnected, and no new numbers are given." - lau@gandalf.rutgers.edu

International Components Corporation
1803 NW Lincoln Way
Toledo OR 97391-1014
+1-800-325-0101 (US & Canada)
+1-503-336-4400 (FAX)
Cabinets&Enclosures; Capacitors; Diodes; ICs; Potentiometers; Resistors; Sockets; Transistors; Books. No minimum order, $2 handling under $25.

Kelvin Electronics
7 Fairchild Ave.
Plainview NY 11803
+1-800-645-9212
+1-516-349-7620
+1-516-349-7830 (FAX)
Minimum order $20; S&H 5% of order ($5 minimum, extra for large stuff, overnight, export (like to Hawaii :-), and etchant; based on UPS charges). Lots of electronic parts & tools, some robotics supplies, model rockets.

H & R Company (Herbach and Rademan)
18 Canal Street, P.O.Box 122
Bristol PA 19007-0122
+1-800-848-8001 (Orders)
+1-215-788-5583
+1-215-788-9577 (FAX)
Minimum order $25 ($5 processing charge under $25), shipping $4.75 under $30; Most items are new overstocks, much regularly stocked stuff as well. Tools,

electrical supplies, motors, mechanical components, robotic components.

John Birkitt
1, The Strait, Lincoln
+44 522 520767
Lots of stuff for the practical enthusiast. Many bargains to be had if you've the patience to sort through the extensive heaps of assorted electronic miscellany. Good stocks of new components, tools and books, masses of RF gear and very competetive prices.
Two shops side by side cater for the "consumer" type goods and the "electronics" type. Does mail order, takes visa/access etc. Mail order list contains lots of unusual goodies that you'll possibly never see on offer anywhere else. (thanks to Dave Walster @ lincoln.gpsemi.com)

N R Bardwell
Abbeydale Road, Sheffield
+44 742 552886
Possibly the busiest electronics emporium I've ever visited. Specialises in radio gear and alarm equipment but many of the obligatory bags of "unmarked, untested" goodies makes Bardwell's *the* place to go. Friendly, efficient and knowledgeable staff. Cheap. Very cheap. Thriving mail order business with some good bargains in IC's and discrete's. Write/phone for a price list. (thanks to Dave Walster @ lincoln.gpsemi.com)

SURPLUS ELECTRONICS:

All Electronics Corp.
P. O. Box 567
Van Nuys CA 91408-0567
+1-800-826-5432
+1-818-904-0524
+1-828-781-2653 (FAX)
$10 minimum, $4.00 S&H. New and surplus electronics.

Alltronics
2300 Zanker Road
San Jose CA 95131
+1-408-943-9773
+1-408-943-9776 FAX
Surplus electronics. $12 minimum, shipping per UPS.

American Science and Surplus (formerly JerryCo)
P.O. Box 48838
Niles IL 60714-0838 ### New address.
+1-708-475-8440
+1-708-864-1589 FAX
Surplus. *The* surplus place. Lots and lots of surplus. WWII gun cameras, velcro, laser disk chassis, 6 volt VW wipers motors, LEDs, rubber brains, you name it, they've had it. Catalogs are a really good time.
$12.50 minimum order (which includes the $4 shipping charge).

BCD Electro ### Out of the mail order business!
P. O. Box 450207
Garland TX 75045-0207
+1-214-343-1770
According to Barrie Britton (24 Feb 94), BCD has gone out of the mail order business.

Fair Radio Sales
P. O. Box 1105
1016 E Eureka St.
Lima OH 45802
+1-419-227-6573
Surplus electronics. Heavy on parts for old Collins gear.

Hosfelt Electronics
2700 Sunset Blvd.
Steubenville OH 43952
+1-800-524-6464
+1-614-264-5414 (FAX)
No minimum, $3.75 S&H. Surplus electronics.

HSC Electronic Supply (Halted Specialties Co.)
3500 Ryder Street
Santa Clara, CA 95051
+1-800-4-HALTED Orders only
+1-408-732-1573 inside California and outside US
Surplus (new) electronics; new and used test equipment. Minimum order $10 ($2 handling charge under $20), plus UPS shipping cost. Has three stores, of which 3500 Ryder Street is one.

Marlin P. Jones & Assoc.
P.O. Box 12685
Lake Park FL 33403-0685
+1-407-848-8236
+1-407-844-8764 (FAX)
No minimum ($1 fee for under $10), shipping per UPS. Surplus electronics.

R&D Electronics
1224 Prospect Ave.
Cleveland OH 44115
orders: +1-800-642-1123 (tues - fri 9am-4pm sat. 9am-3pm EST)
info: +1-216-621-1121
fax: +1-216-621-8628
$10 minimum. Surplus electronics.
"Also known to stock many components, but this is not discussed in the catalog. Local store, a cleveland institution, is called Electronic Surplus, Inc., and has been there since '48. Third generation now runs it." -- wb8foz

Surplus Sales of Nebraska
1502 Jones Street
Omaha, Nebraska 68102
+1-402-346-4750
+1-402-346-2939 (FAX)

New and surplus radio electronics. Wide selection: air variables.
Catalog $3 (free with order, refundable with $25 catalog purchase).

Tucker Surplus Store
1717 Reserve St.
Garland TX 75042
+1-800-527-4642 extension 135
Surplus electronic gear; oscilloscopes and signal generators from the days when dinosaurs with vacuum tubes roamed the earth (some solid state gear, but all well used). Prices seem relatively high, and you'll be shocked to learn how much it costs to ship a 75 pound oscilloscope by motor freight...
[Steve Brown, N8HFI:
In defense of Tucker, the have a broad selection, repair facilities, and they certify the used equipment to meet the original specification and warranty it for 90 days. Not every source does this:]

Davilyn Corp.
13406 Saticoy St.
North Hollywood, CA 91605-3475
+1-800-235-6222 (Ex. CA)
+1-818-787-3334 (CA)
+1-818-787-4732 (FAX)
Surplus electronic gear.
[has much better prices [than Tucker], but sells used equipment as-is. -N8HFI]

SPECIALTY COMPONENTS:

JAN Crystals
2341 Crystal Drive
P.O. Box 06017
Fort Myers FL 33906-6017
+1-800-JAN-XTAL (Monday through Thursday)
+1-813-936-3750 (FAX)
+1-813-936-2397 (plant)
They make crystals. Minimum order is $10, which might be one crystal, or might be two.

Crystek Corporation
2351/2371 Crystal Drive
P.O. Box 06135
Fort Myers FL 33906-6135
+1-800-237-3061 (M-F) (US and Canada but not Alaska and Hawaii)
+1-813-936-2109
+1-813-939-4226 (FAX)
They make crystals too. They were the cheapest last time I ordered, but I don't have an up-to-date price list. It took about 4 weeks, and they had said it would take 6.

ICM (International Crystal Manufacturing Co., Inc.)
701 W. Sheridan
PO Box 26330
Oklahoma City OK 73126-0330

+1-800-426-9825
More crystals. They were more expensive, but they have lots of pre-made crystals for various rigs, so they would probably be faster.

Amidon Associates
2216 East Gladwick Street
Dominiguez Hills, CA 90220
+1-213-763-5770
+1-213-763-2250 (FAX)
Toroid cores and related things. Very fast service. Now takes MC/Visa and phone orders.

Palomar Engineers
Box 455
Escondido CA 92033
+1-619-747-3343
Toroid cores and shielding beads.

RF PARTS
435 South Pacific Street
San Marcos CA 92069
+1-800-RF-PARTS (Orders only)
+1-619-744-0700 (main order line & delivery info)
+1-619-744-0750 (customer service, warranty, tech & applications, 10AM-4PM)
+1-619-744-1943 (FAX)
Tubes and transistors. $2 handling below $20 for US orders; $5.50 minimum handling for Canada orders; they take foreign orders (but no handling info was given in the QST ad).

K2AW's Silicon Alley
175 Friends Lane
Westbury NY 11590
+1-516-334-7024
Free catalog, $10 minimum order. Semiconductors, in particular high-voltage diodes.

Small Parts, Inc. [New address and phone, 23 Dec 91]
13980 NW 58th Court
P.O. Box 4650
Miami Lakes, FL 33014-0650
+1-305-557-8222 Order department
+1-305-557-7955 Customer Service (ask for Mirta)
+1-305-558-1255 Catalog (ask for Elizabeth)
+1-305-557-8004 Custom-made Parts (ask for Ziggy)
+1-305-557-8005 Non-standard Sizes
of catalog parts (ask for Eric)
+1-800-423-9009 Toll free FAX line
$12 minimum. Mechanical parts, metal stock, Teflon(R) sheets, tools, wire-size drill bits (as in #61 size for PC board holes).

KITS:
(The terse "Note:" descriptions are from the ARRL Kit List courteously

supplied by Ed Hare and Mike Gruber at the ARRL. For a much more complete list of kit suppliers, use the ARRL email server; send the following as the text of a mail message:

This is the club that was selling the incredibly popular "NorCal 40" kit to members, and currently is about to sell the almost-certain-to-be popular Sierra kit.

North Texas QRP Club
(Subscription to)
Twilight Publishing Company
1301 West Highway 407, Suite 353
Lewisville TX 75067
Publication is the K5FO Newsletter (possibly changing name eventually). Filling in the gaps left by the publication schedules of QRPp and QRP Quarterly, Chuck Adams (K5FO) will be publishing a newsletter for low-power amateur radio enthusiasts in Feb, May, August, and November (thus ensuring that QRP enthusiasts must break away from their bench and visit the mailbox at least every 30 days, guaranteed :-). This also gets you membership in the North Texas QRP Club.
"In order to get your copies of the newsletter and to get your number, do the following:
1. Send letter with your name, call(if any), address, email address if you are on the super highway of information, and any other info you want in a membership book to
Twilight Publishing Company
1301 West Highway 407, Suite 353

Lewisville, TX 75067
2. Enclose on photograph of A. Lincoln ($5 bill) produced by the US Govt.
and a postcard with your name and address to acknowledge
receipt of same. I tend to hold on to checks too long. MO is
you don't trust the USPS. :-)"
May '94 will be the first issue, and there won't be any reprints, so get
in on the ground floor! (I will! -jfw)

NOTES:

This file, and many others, are available for anonymous ftp from
ftp.cs.buffalo.edu, in /pub/ham-radio (this article is "mail_order"
in that directory).

CHANGES FOR $Revision: 2.17 $

Add Kanga US, Kanga UK, RF Parts, Cirkit, Birkitt, Bardwell.
BCD Electro out of the mail order business.
Add CW Technology, GNP Sales.
Fix FTP listings (toxicwaste.mit.edu is no longer archiving sci.electronics,
give actual directory name for ftp.cs.buffalo.edu).
Add my name, since this seems to get shared around a lot.
Add QRP clubs as separate category.
Jameco is no longer apparently headed out of the components business, stop
complaining about them (for now :-).
Santa Clara Active Electronics is closed?
JDR moved, changed phone numbers.

>a pilot's organization similar to the amateur's ARRL.

the FCC authorizes the VECs and the VECs authorize the VEs. there is a chain
of command there.

Jeff, you got the license, go get the VE certification and go help. get a
bunch of guys together and start holding testing sessions every 4-8 weeks.
Most VE teams don't mind having new blood either.

bill wb9ivr

459. Re: Radios for Emergency Use

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 13:57:16 UTC
From: hall@macs.ico.tek.com
Message-ID: <2vrj3s$sqt@macs.ico.tek.com>
Source record: 263657
Cross-posted to: rec.backcountry,rec.radio.amateur.misc,rec.radio.cb

In article <gradyCsqDMw.6JK@netcom.com> grady@netcom.com (Grady Ward) writes:

>I am completely happy with an Icom W2A with the extended transmit and
>receive modifications using a lithium AA battery pack.

>This rig is able to hit everything from 121.5 satellites to National
>Park Service in the 170 Mhz range, not to mention and equally wide
>swath in the UHF area.

A *serious* word of warning here. It is usually fairly easy to
modify amateur radios to work on nearby commercial frequencies.
However except for emergencies it is illegal to transmit on those
frequencies with anything except a "type accepted" radio. Type
acceptance is a fairly involved and expensive process which you
wouldn't want to do for a single radio, it is worth the expense only
for manufacturers who will make a and sell a lot of radios to
recover the investment. (I am not familiar with the Icom W2A but
I suspect it is not type accepted.)

Amateurs are allowed to transmit with non type accepted radios in
the amateur bands only. Commercial frequencies (which include SAR
and Forest Service frequencies) have much tighter equipment
requirements. On a commercial frequency it is not enough that your
radio meet specs, the FCC must have certified that it will meet
those specs. Violation of these regulations can result in *large*
fines (kilobucks).

In an emergency you can bend this rule but only in a real emergency
(the FCC will have to agree it was an emergency and that no other
suitable means of communication was available). This also applies
only to the communications necessary to deal with the emergency,
don't call up the rescuers to thank them on a non-type accepted radio.

Yes, my 2 meter set is modified to transmit on SAR frequencies but I
have never used it there, and the only time I would use it there is
in an emergency. Even on SAR operations I use it only on amateur
frequencies. On SAR frequencies I use a type accepted radio provided
by my unit. This can be a pain in the neck but that is the law.

The FCC has recently been cracking down on those who violate this
rule, including several SAR people. There was an article about this
in a recent issue of the Mountain Rescue _Forum_. (I could probably
find it if somebody wants a reference.)

Be aware that in the U.S. *only* the FCC can regulate such things.
I am personnaly aware of cases in which state SAR coordinators or

local sheriffs have issued letters to SAR personnel "authorizing" them to use non type accepted radios on SAR frequencies. Those letters are not worth the paper they are printed on. The local or state authorities may own the rights to use the frequency but they do not have authority to authorize a particular radio on that frequency, only the FCC can do that. This is a perogative which the FCC guards rather jealously. Any local authority issuing such a letter is misinformed and will likely cause trouble for both themselves and anybody acting on their misinformation.

Personnaly I would like to see this rule modified to allow use of non type accepted radios in SAR training and operations, provided those radios transmit no more than 7 watts. This would simplify things for many of us. (Type accepted radios typically cost several times as much an non accepted radios and usually do not have all the features of an amateur rig). However until such time as the rule is modified (if ever) I will continue to obey it.

Anybody care to join me in a letter writing campaign to the FCC?

460. SAREX Rise/Set Times 7/11

SB SAREX @ AMSAT $STS-65.004
STS-65 Eastern R/S Times 07/11

Below are the rise and set times for STS-65 for selected US cities
over the next four days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

SB SAREX @ AMSAT $STS-65.006
STS-65 Western R/S Times 07/11

Below are the rise and set times for STS-65 for selected US cities
over the next four days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

Wanted to know if anyone from that club see this BBS? Used to be a member &
board member MANY years ago. Also, what was the club call before W1NY? I
got that call for the club when I got 2nd call of W1BHJ ! Was abt. 1964?

Source record: 263663

As this is NO CREATION of new data, it should be made free to the Newsreaders!
Yes you had to POUND it in.It will take much up dating also, however it should be for the benefit of thoes ON THE LIST. This can be had by getting the VHF / UHF subnewsgroup reader list & building on it. Likely 50 or more on that.Just my 2 cents & great desire to share data. Dick

Hello, I thought I would share some interesting VHF propagation news.
Yesterday 7/11/94 starting at 0030 Zulu, I worked the following on 2 meter SSB.
40 stations in the Seattle area, one VE7 in Canada,a station in Idaho, then
another in Montana.....Mode of propagation was Sporatic E. The whole time, six meters was
open with short skip propagation into ore, wash..etc....
Just thought I would let readers know to listen closely during the May, June,
and July months for this mode of propagation.
73 from the Northern Mojave Desert DM15...de KB6IGC......Todd.

Our 145.33 repeater has used 2 separate antennas for many years. We were very lucky to have a transmit Stationmaster on top of the tower, and a receive Stationmaster 30 feet below it. Well, the upper one took it's last lightning hit recently. Our amp and power supply got cooked, but no repeater damage. The hardline shows an open at the upper end with a TDR on the line. Until a rigger can replace that antenna, we have configured to run both transmitter and receiver off the lower antenna, by putting both the duplexore output feeds into a "T" connector. It works fine, but we have no idea how to properly configure this. The cans are old phelps-dodge ones, in 2 rows of 3. Probably 15 years old. There are 2 adjustment rods on each cavity. So, my precise question(s): What cable lengths/type are critical? How do we tune this all up? What equipment is needed, and what are the correct procedures? And, if I wanted to add on more bandpass cavity in the line to eliminate those pesky pagers, how could I do that? Thanks in advance for any help, or pointers to a vendor who will help. -pat

471. 900 MHz QRM DX record?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 15:31:12 UTC
From: glenne@n6gn.sr.hp.com
Message-ID: <Css8G1.LMs@srgenprp.sr.hp.com>
Source record: 263670

Here in northern California, a couple of us are working on higher speed digital hardware. As part of this we have 904.5 MHz 10W digital transceivers and hardware on hilltops as well as ends of a "backbone" running data at speeds from 38.4-230.4 kbps. One of these hilltops is at 2000' ASL located a few miles inland from the Pacific Ocean on Morhardt Ridge with 180 degree view of the water horizon. It has antennas pointed NW toward k6hsj's QTH at Seaview, also near the coastline but at 1300' ASL as well as east toward n6gn's QTH which is at about 100' ASL in an inland valley well shielded from a view of the water by a 1000-1500' coastal mountain range. This hardware has been working well for quite some time.

However, on Thursday, July 7 something strange happened; Morhardt stopped copying packets on 904.5 MHz. This happened even though its signals were unchanged and strong, in the -60 dBm territory with >25 dB of link margin and very copiable. The outage lasted only a few hours but soon after it for the next day or so from n6gn and k6hsj's we observed what appeared to be strong radar centered on 905 MHz about 1 MHz wide.
Both of us had opportunity to look with spectrum analyzers. The signal acted like radar with an antenna rotation time of about 10 seconds, PRF of about 250 Hz but with a few-percent step in PRF every scan. The inter-pulse time went from about 4 milliseconds to perhaps 4.1 milliseconds. The PRF tone sounded like a step or two on the musical scale. Pulse on-time was about 125 microseconds for a duty cycle of around 3%. After about 24 hours the radar disappeared.

The funny thing was how strong it was, that we hadn't heard it before and that it peaked to the west when the antenna at n6gn was rotated. Though there was a lot of multipath on the signal. It was copiable throughout the scan at n6gn and peaks were in the -60 dBm region.

We immediately began wondering if someone was installing a new marine radar somewhere along the California coast. However, this is not particularly populated coastline and it seemed unlikely. Thoughts of QSYing all the radios went through our heads and I went to bed in a bad mood.

I woke up the next morning with a crazy thought; "Could there have been a tropospheric duct to Hawaii?". That same 2400+ mile path has been known to provide usable SSB and even NBFM QSOs on all ham bands from 6M through 10 GHz for well located coastal stations and even once or twice partway into the interior valleys on 2M.

In listening to the local 6M DX/EME repeater I heard talk about KH6 being received on 6M, no big deal since E layer has been good and

California <-> Hawaii is fairly common during the season, but this report was of *tropo*.

So, my question to the net, particularly to those in Hawaii, is "does anyone know of a 905 MHz radar with the above characteristics that could account for what we observed?" With as much apparant ERP as this thing would have to have, it should produce pretty good QRM for Part 15 device users and amateur users of the lower end of the 902-928 MHz ham band. Also, are there any other reports of amateur, commercial or TV DX during the last few days from Califronia <-> Hawaii which could corroborate the presence of a tropo duct? If not Hawaii, is this a common frequency for shipboard radars?

If such a radar does exist in Hawaii, we may be the proud claimants to the world 900 MHZ QRM DX record title. (:>)

I tend to agree that a portable cellular is the most graceful way to accomplish a rescue. However, if that's not a viable alternative, a civil aviation band (116-137MHz AM, worldwide) HT is a good alternative. The fact that all the receivers are at 2000 to 30,000 feet AGL eliminates the need for any special power or antenna considerations. A legitimate Mayday on 121.5 MHz or an intelligently chosen approach or center frequency will produce a response. It is still unlicensed operation, but now at least the radio is type accepted! Also, now you won't be stepping on the local sheriff's toes and your legal dealings will be limited to the FAA and FCC. Prices for these radios are only slightly higher than "Ham" HT's and (as a bonus) most of them receive the weather frequencies (162.55 and such, FM). You just have to decide if you want to play or you want to get rescued. A good dose of natural common sense would be essential and highly recommended!
-Ken

SO>
SO> --Shawn

and K5JCM replied . . .

NOT A pizza order is done in "plain langauge". 97.113(d) excludes
"codes and ciphers" which a pager code certainly is!

and I say . . .

Hold on a minute, let's look at the reg., shall we:

First off, the cite should be 97.113 (4)

97.113 Prohibited transmissions. - (a) No amateur station shall
transmit: [subsections 1-3 deleted]

(4) Music using a phone emission except as
specifically provided elsewhere in this section; communications
intended to facilitate a criminal act; messages in codes or
ciphers intended to obscure the meaning thereof, except as
otherwise provided herein; obscene or indecent words or
language; or false or deceptive messages, signals or
identification;

Key here: "messages in codes or ciphers INTENDED TO OBSCURE THE MEANING
THEREOF,".

In initiating a pager, most systems require a standard phone call to the
pager system, where you enter the call back number using the telephone DTMF
pad. This can be done from a DTMF capable radio and phone patch. No ciphers
or codes are sent over amateur frequencies other than the phone numbers,
and those are not sent with an intention to obscure.

In the case of a pager on amateur frequencies, the pager code is
transmitted directly on the amateur bands. Many new HT's, like my 78A, or
the FT-530 have the capacity to be used as pagers in this manner. There is
still no violation, since the pager code is a control code, not a code
intended to obscure. It is the same as the codes used to access an

autopatch, control a remote base, or any other similar function. Just make sure you are not doing this for business purposes.

476. Re: Humorous Field Day Stories?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 17:10:31 UTC
From: dale@sequent.com
Message-ID: <1994Jul11.171031.3144@sequent.com>
Source record: 263679

Field day stories:

Location on the Oregon coast, in a "hole" surrounded by high rock walls. We needed at least one packet contact. None of the 4 people had ever worked packet much, but one guy had just invested in an all mode 2 meter rig and a bunch of packet equipment. We put a vertical up on 10 feet of mast and he tried four hours to get into a system about 40 miles North. Finally about 9:30 PM we decided to use all of our Radio Shack mast sections and try and use a small 2 meter beam to get connected with the packet system. We took down the vertical and ended up with 2 or 3 10 foot sections and 2 five foot sections of mast. We put the beam on top of this wobbling mast and brought it up with much difficulty. We tied off the guys after quite a bit of work to get this thing up in the air. Unfortunately no one had connected a feed line to the antenna! So we had to repeat the process. About midnight we had managed to hop nodes and get across the boarder into Washington to find someone on packet. Finally we were about to make our much needed packet contact! At our request for an exchange, the operator at the other end typed "Everyone has gone out for pizza and I don't know how to use any of this stuff". It took us about 15 minutes to explain to this fellow what he needed to type to give us our needed exchange on packet. We figured he was the least experienced member of that group and was just left to guard equipment.

Packet operator and his friend went to bed about 1 AM. Jim and I stayed up until 2 or so. Jim slept in small cabin with all the radio equipment and I went a couple blocks up the hill to a house and went to bed. I got up real early and called Jim on HT to see if he was up. He said that he was so I went down an we got back on the air. Jim left his HT on (145.55) and after a bit we heard U5MIR talking to someone -- we could only hear U5MIR's side of conversation. Since we were on the beach front with no hams around, I figured this must be a Soviet fishing boat off the coast. (Being a great ham, I instantly identified that "U5" call.) I wanted to give him a shout with the 2 meter base station, but Jim says, "No, that would be a frequency change and cost us 15 minutes on a different band". When the other two guys got up and joined us we told them about the ham on the Soviet fishing boat and one of them explained that U5MIR was the Soviet space station which would have been going by about then.... Whoops.

Following year we are out in a field in the Oregon Coast range. I wanted to do a little operating night before field day so we put a tri-band beam on a Radio Shack push up mast. The next morning we wanted to get that beam *all* the way up on the mast. We lowered the mast and extended it all the way. We had tilt-up base for the mast welded on the front of a

jeep and I was on a ladder on the back of a pick-up trying to tilt the mast and beam up. Jim has a rope from my car to mast and is going to pull the mast up. Unfortunately as the mast started to come upright it folded over near the top. We had to work real hard to get it back down without destroying the beam. We cut a few feet from the top of the mast and remounted the beam. We were trying to figure out how to get this thing back up in the air when we spotted a truck from the local power company driving down the road. We started frantically waving at the truck and he swung off he road and headed out across the field toward us. Turns out he was looking for a site where he was to do some work and figured that since we were waving at him we must be the site. Of course we were not, but we did convince him that he should use the bucket on the truck to help us get our antenna hoisted up in the air. He said that as long as we didn't tell the company about it he would do that for us.

73, Dale.

In fact, 97.3(c)(5) mentions something about "Incidental tones for the
purpose of selective calling or alerting", so it would seem that it
is not prohibited, only that it is considered a "phone" emission
for purposes of the rules.

|> 73, Russ WD0FTF (soon /AA)

Hiya Russ,
You didn't mention anything about your sound generator. Are
you using the speaker? I use SuperMorse 4.04 (I think) with a
ProAudio Spectrum 16 and the sound is REAL clean. Not just
beeps, but tones.

Which leads me to this. I haven't been studying for some
time, and while visiting Battle Creek, Michigan from 7/5 through
7/10, we had several tornados, especially on one day. Just before
breaking into the tv programs, the local tv station played ---.. at about
5wpm mixed in with the program audio and then broke for a report.

What does that translate to and what does it mean?

Many thanks.

Correct, but the VE is still "certified" under FCC-established rules.

The controls aren't as tight as they are in the aviation case, and I assume
this is because the risk of error carries less potential for disaster.

This was, by far, the worst conditions I have EVER seen in my 8 years of contesting! As you'll see in my .signature, I run a dipole antenna. Most of the time, there's at least SOMETHING above 20 meters to speak of.

This weekend, I heard ONE person on 10 meters and nobody on 15. I remember back to 1990 when a little guy like me could pop up on 20 and 15, and work Russians all day. Eastern Europe was there until last summer. Now 20 is like a big wasteland for me and DX - I'm forced to 40 and 80, where the antenna becomes much less effective, so maybe I should pick up on 6 meters and look for e-skip or something like that.

I was looking forward to this contest for quite a while. I was really disappointed (but didn't feel so bad about going out to dinner Sat. nite).

Just think, another two years, and we'll be at the bottom!!! :-(

Yes that should work. The problem is that you would buy an
expensive radio which you could not legally use except in an
emergency (unless you happen to be involved in aviation). I suspect
few people would be willing to put out the bucks and carry the
weight unless they could also use the radio for more day to day
activities. Ham, CB and cellular all have day to day applications
so you aren't just waiting for an emergency.

487. FCC Delays now at 17 weeks! PLEASE READ!!!

Newsgroup: rec.radio.amateur.misc

To all of you who are awaiting licenses from the FCC:

This word from my buddy John Creel, WB3GXW, the contact for Laurel, MD VEC:

DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!
DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!
DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!

He said that upon his tour of the FCC license processing facility last week, they now have SIX computer terminals, but only ONE person processing licenses (this is, sadly, true). The FCC may actually consider volunteers at some point, but there are certain legalities involved with this that have not been circumvented yet.

He also said that the FCC is receiving upwards of 50 calls a DAY! And that in the time it takes to receive a phone call, TWO licenses could be processed! The backlog is now at 15,000 Form 610s!!!

If your application has taken over 26 weeks, contact your testing team, or your VEC - but let THEM call the FCC, if necessary.

Supposedly, the delay is growing BECAUSE so much time is being spent on fielding these phone calls (guess who answers them? The person doing the data entry, who has to leave the computer to get the damned phone!).

I do have a question though - haven't they ever heard of answering machines?

PLEASE HEED THIS MESSAGE! PLEASE PLEASE PLEASE be patient. Thank you.

As a smoker, I dislike your comparison. At least the tobacco companies
have done something on my behalf that I wanted them to do.

Seriously, though, I didn't see anything that said ARRL suppressed,
modified or ignored any of the Committee's findings, which seem to be the
main accusations against tobacco companies. All I saw was that the
Committee wasn't consulted prior to the reply deadline for the NPRM, and
that it appears (strongly, IMHO) that punitive action was taken by ARRL
when the Committee replied to the NPRM as individuals and without ARRL
permission.

|>
|> Gary

Gary, do you have or can you direct us to any hard data concerning the commonly available 2m antennas? You talk about "bang for the buck", but I would like to have some more meaningful data to consider.

A longevity note: My father has had a 2m Ringo in continuous service for more than 10 years. He lives in northern Nevada with high-altitude sunlight, high winds (bent his 35 foot "self supporting" tubular tower over 4' above the ground), snow and ice, etc. Longevity is one attribute that I can address with authority, and the Ringo seems to be acceptable.

Can you direct us to plans for homebrew versions of the Comet or Diamond designs? I like these antennas, but would prefer one that is made in the U.S. (by me!)

499. HTX-202 S meter - What does it measure during TX?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 22:17:46 UTC
From: msimon@CS.Stanford.EDU
Message-ID: <2vsgea$4h4@Times.Stanford.EDU>
Source record: 263694

Hi,
I have an HTX-202 VHF HT and was wondering what the signal strength meter measures during transmit. The owners manual does not discuss the meter at all - The local radio shack does not know either. The meter is the row of lcd tombstones at the bottom of the LCD display.

I assume the conventions used wrt to this meter by the HTX-202 are similar to other HT's.

Tnx

500. re: Anyone USE DTMF Paging ?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-11 22:18:47 UTC
From: tvr@cnmat.CNMAT.Berkeley.EDU
Message-ID: <TVR.94Jul11151847@cnmat.CNMAT.Berkeley.EDU>
Source record: 263692

IMHO, and you can precede everything I say with that, the paging function is only useful if you know you're in a situation that warrants it, such as volunteer event communications or sometime when you're expecting a call on a crowded frequency. I don't use it because it's too restrictive for me. I enjoy listening in and responding occasionally to all conversations. If a paging function allowed the use of subtones to cause an alert beep, or a data burst in the case of some radios, then normal comms could be used in the interim. Besides, I do listen for my call sign when the radio is on.

Another reason to use some sort of squelch mechanism is when you're in an environment where idle chatter is not appreciated. My partner finds the radio quite irritating (in part as a reaction to the operating habits of one particular operator, a repeater trustee) and i don't always want to wear a headset mike. I will ask that people either use a specific PL (tone squelch) or rather than paging, ordinary code squelch, in part as there is no standardized method of paging on 2m/440. That may mean going simplex if the repeater(s) you prefer are not compatible. I usually enjoy listening as well, but try to be courteous to those around me, and on the infrequent times i use public transit, i am required by local law to use a headset or some kind of squelch mechanism.

page enabled, I can't hear what's going on so I don't know if I'm stepping on another QSO in progress. Again, these are only my views and should be taken with lots of salt.

Right, you need to turn off tone/code squelch before transmitting!

You'll find that any repeater that is intelligent or has an autopatch will not pass tones.

In my area, most pass through neither DTMF for code squelch or CTSS for tone squelch. Hence you need to use simplex or find a suitable repeater and/or squelch mechanism.

Repeater controller designers: Please think about a DTMF sequence or CTSS tone that would cause disable interpretation of such codes until carrier drops and pass these thru so such mechanisms code be used.

Everyone else in metropolitan areas: Consider using a commercial paging service instead and hope those who want to reach you who don't have phones nearby can use an autopatch to reach you. Page with a frequency instead of (or in addtion to) a phone number, many services will let you use '*' to indicate the decimal point.

I guess that, in certain situations, paging could be useful, but because paging is slightly different for each radio (none of mine can page

another), all parties involved need to have the same radio, at least the same brand.

I find code squelch serves many of the same purposes, and since it used for access control on selected repeaters, the HT manufactures have had to do that reasonably compatibly.

Here is a copy of a letter I am sending today to my Senators and
Congressmen. I suggest that anyone who cares about the FCC's
beaurocratic bungling of new license requests write their Washington
representatives rather than just beefing about it here. We can all
commiserate with one another, but we can't do anything about it.
Your Senators and Congresspeople can.

regards,
Ira

----------ATTACHED----------
Dear Senator ,

Considering all the difficult and intractable problems that come before
you, I'm sure you will be glad to have a simple one brought to your attention.
The FCC requires that amateur radio operators have a valid FCC license before
they can operate their radios. The delay for obtaining this license from the
FCC is now at the absurb length of 17 weeks (see attached). Anything you
can do to alleviate this beaurocratic snafu will be much appreciated by
the many Ham enthusiasts in your state and around the country. It is now
the summertime, and many students are looking for summer jobs. At the very
least some summer help could be hired to temporarily reduce the backlog
while a better permananet solution is sought. I look forward to hearing back
from you on this trivial but annoying matter of government beaurocracy.

Sincerely,

Ira Machefsky

>hr & 15 min at Half hr.
>Poss. Air Force transmitting station 2 miles away? Dick W1DGA

I heard this today on 15m. At one point it was on 21030, right on
top of a pile-up for TN0CW. It shifted around over half an hour.
This was around 4 pm CDT, I think. Next time I hear it I will try
to get a rough bearing on it. I'm in Austin TX.

It's not quite a CW comma, but I recognized it from that description,
i.e. it is close to _ _ . . _ _ not . . _ _ . . as mistyped by
the referenced poster.

The last time I heard anything remotely like this (raspy periodic
stuff in the ham bands) was at the start of Desert Storm, when it
was much louder, and heard equally well by the station in the U.K.
that I was working at the time. Completely different pattern but....

Doesn't an amateur have special priveliges in emergency situations in the states if he/she has their call on their plate?
I once asked about this for Maintoba and was told that if your vehicle had the call sign as the license, it gave you certain priveliges during emergencies or accidents, much like a doctor that has a special plate with their MD number on it. I'm not sure exactly what these priveliges are but this is what I was told. Also, in Manitoba, you can't get any information from the DMV using a plate number unless you have a signed note from the owner of that vehicle allowing you to get information. I haven't figured out what purpose this serves but it manages to keep at least one person employed!

just my 1.4162 cents...

510. BIOEFFECTS 2 OF 9

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 01:25:00 UTC
From: oopdavid@ubvms.cc.buffalo.edu
Message-ID: <Cssx3v.Epq@acsu.buffalo.edu>
Source record: 263705

The Chairman had not been consulted nor advised as to Mr. Price's appointment as Board Liaison until April, 1992, when a copy of a letter that was sent to an amateur expressing concern regarding the safety of amateur radio operation arrived at the Chairman's desk over the signature of Mr. Price, speaking for the Committee. The Chairman voiced his objections to Jay Holladay, W6EJJ, concerning this unilateral action on the part of Mr. Price, as being an inappropriate role for the Board Liaison to take without consultation with at the least the Chairman of the Committee. The Chairman heard nothing further regarding this matter.

In April, 1992, QST published a photograph and description of an antenna disguised as a curtain rod as a "cute" item to show the cooperative effort of a ham and his new bride. This was not accompanied by any disclaimer as to the inadvisability of the risks of the operation of such a station due to potential bio-effects issues. When the Committee objected to this, a letter from the Chairman was published in QST with the headline "Indoor Antenna: RF Hazard?", with the question mark implying to the Committee that there was editorial doubt as to the veracity of the observations expressed in the letter on behalf of the Committee. The last word on this matter was had by the original operator, W6REF in a letter headlined "Bioeffects Overkill," criticizing the stance of the Chairman as being unreasonable because the power levels being generated at this installation were not known. Such an editorial disregard for the basic tenets that the Committee has espoused seems rather cavalier and inappropriate. The less than subtle captioning of each of these letters, and the lack of editorial insight into the entire issue was very disturbing.

511. BIOEFFECTS 5 OF 9

4. The complete lack of consultation on the appointment of Board Liaison was documented, including the absence of the common courtesy of a formal letter from anyone at the League regarding these appointments.

5. Regret and dismay was expressed to the Chairman regarding these shortcomings and it was stated that these events should not have occurred.

At the close of this meeting, a positive feeling of trust and understanding between the parties appeared to have been established, and Mr. Maxwell expressed a clear desire to improve the communications between the League and the Chairman and members of the Bio-Effects Committee. It is clear however, that this feeling was not reciprocated by others at the League.

On March 1, 1994, the Chairman and the members of the Committee who signed the independent citizen's filing received a FedEx letter, with your stamped signature advising us of your distress in the entire matter of our filing. In the letter you made several statements which strike the members of the Committee as deserving of comment.

While the members of the Committee have no problem with the desire of the League to appear to apeak with one voice on matters before governmental agencies, it is absolutely clear to all except for you, that our filing was "as individuals, and not as representatives of the League". As evidence to support the contention that it is a rather peculiar view to see this filing as a separate voice of the League, is the report by Fred Maia in his W5YI Report of February 1, 1994, clearly restating that these members were speaking as individuals, and not as the ARRL Bio-Effects Committee itself, nor on behalf of the League.

512. BIOEFFECTS 9 OF 9

Newsgroup: rec.radio.amateur.misc

From: oopdavid@ubvms.cc.buffalo.edu
Message-ID: <CssxC1.Eyo@acsu.buffalo.edu>
Source record: 263713

The members of the ARRL Bio-Effects Committee plan to continue to contribute to an understanding by amateur radio operators of the issues relating to the potential bio-hazards of our activities as radio operators, and as such will remain active in our continued review of information and research in this field as it becomes available. We plan to remain available to any and all amateur radio operators who seek our counsel. We further plan to continue to speak out in matters that concern us as individuals and as private citizens as they pertain to our deep and fundamental interest in amateur radio.

We will however, not allow our names to be subject to the political machinations and narrow views of individuals who seek to use us for their own aims or as "window dressing" for you or the League. It would be unfortunate for all amateur radio operators to suffer the repercussions of such a short-sighted view of things, particularly when they may result in long-term negative consequences to amateur radio as a whole. There has been a loss of confidence on the part of the members of the Committee in that you, as President of the League, are clearly not concerned with the continued successful functioning of this Committee, unfettered by extra-scientific and parochial influences. In addition, it is felt that your actions have subjected both the scientific as well as personal integrity of the members to serious compromise. There appears to be no reason that individuals who serve as unpaid volunteers to the League should be subject to such abuse.

We have considered the consequences of our resignation both as individuals and as a Committee as a whole. We stand together united in a common view that you do not see importance of this Committee as originally constituted, that under your leadership, the League has ignored the important resources that the Committee has to offer to all of amateur radio, and that you personally fail to understand the issues of personal integrity that this entire situation has raised.

Therefore, it is with the deepest of regrets that we find that we must submit our resignations as the ARRL Bio-Effects Committee forthwith.

[signatures of all members by Chairman Shulman}

Hello Mike , Name here is jim and I hold amateur call N2ETE. Been a swl for 22 to 24 years and my advise would be to get the Sangean ATS-803a ans d a and a mfj indoor active antenna. unless you have room outdoors, put up a long wire antenna. This I feel would be a good start since you won't have to spend much money and if you lose interest (which after you start up is highly unlikely!!), you won't be out much money. If you have further questions, E-mail me, or write me at jim laughlan 340 second street Youngstown, n.y. 14174.

Ther are NO mods for the HTX202. This radio's front end only lets in signals between 144 to 148 MHz anyway.

The only reason other radios have mods is that those radio's controller firmware was written to allow those mods. The HTX202's firmware doesn't have any code to sense the presense or absense of programming diodes, and thus is not modifiable.

You *could* retune the HTX-202 front end to some other range, if the
CPU would spew the correct bits at the MC145170 synth chip.

By the way, the synth chip and data is easily available from motorola.
Nice part. The HTX-202, for the most part, is a nice, simple, design.

Rumor has it that Maxon builds them. Really!

As a new 6M operator, I wanted to find out what other operators used
to alert themselves when the band has been opened. In lieu of any other
system, I have been leaving my rig on 50.125 and keeping an ear out for other
stations when I hear 10M open up.
Any Suggestions?

Sounds a bit like our CB radio service.

Maybe we should require 11M ops to have a nocode tech license; that would give the techs an HF band to use as amateurs. Allow all HF modes to be used. Maybe throw out the channel scheme and allow VFO operation. Currently 11M runs from 26960 to 27410 kc - maybe the land mobile band from 27410 to 27540 kc could be included in this new tech band. Benefits: 11M would be cleansed, and the techs would get a taste of HF.

The problem with your statement is that about half of all QSO's on
HF are via CW, and CW-only QRP rigs and kits are being sold as fast
as they are being produced.

[some deleted]

I felt I just had to say this. I'm listening right now to 3860 kHz and I
hear more jabber from the guy at the radio club than the retransmissions
from the shuttle. I've noticed this trend over past shuttle missions as well
that the radio club talks an awful lot. Some of the information is quite
useful but at the expense of the primary purpose for the station.
I don't know how you could solve this problem unless you used another freq for
your bulletins, maybe up 10 kHz, and announced that on the retransmission
freq before you speak, or have a regular schedule for these transmission
on the alternate freq. I hope you don't think I'm griping too much because I
can't thank the people there enough for this service. When our link here isn't
working or I go on a trip, you are always there.

Just my $0.02.

Hi Fabio, is his TV FCC approved?... just kidding. You did not say what frequency you are on but if you are on HF, get a low-pass filter for you and a high-pass filter for him. It is possible that the design of his TV is so bad, nothing you can do can help. I wait until all my neighbors go to sleep and then work DX.

The 3-Hr Ap Indices for 10 JUL 94 are: 4 3 5 3 7 9 7 7
Greater than 2 MeV Electron Fluence for 11 JUL is: 1.8E+07

SYNOPSIS OF ACTIVITY

Solar activity was very low. Activity this period
consisted of 2 weak optically uncorrelated B-class x-ray events
and a B6/SF from Region 7749 (S09W53) occurring at 11/1002Z. In
white light, this region has grown slightly while overall spot
count has declined. Just to the south, Region 7750 (S17W55)
has shown the most growth of any region on the disk. Though
stacked, both regions maintain a simple north to south magnetic
inversion line so have been fairly quiet the past 24 hours.
Region 7746 (N11W44) also indicated some growth this period in

both areal coverage, spot count and mag complexity. Yesterday, 7746 had three distinct penumbral areas but has since lost the penumbra around the leader spot group while forming a delta magnetic configuration in the trailer group. Region 7753 (S12E68) was numbered as a simple AXX group. The remainder of the disk and limb was quiet and stable.

Solar activity forecast: solar activity is expected to be low. Both Regions 7746 and 7750 display good potential for C-class and possible M-class activity.

The geomagnetic field has been at quiet levels for the past 24 hours. The GT 2 MeV energetic electron flux was at normal to moderate levels.

Geophysical activity forecast: the geomagnetic field is expected to be mostly quiet to unsettled for the next three days.

Event probabilities 12 jul-14 jul

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 12 jul-14 jul

A. Middle Latitudes
Active 20/20/30
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/30/30
Minor Storm 10/15/15
Major-Severe Storm 05/10/05

HF propagation conditions were normal over all regions. Near-normal propagation is expected to continue over all regions throughout the next 72 hours.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

527. Need manual for US Tower MA550

Newsgroup: rec.radio.amateur.misc

I recently purchased a US Tower MA550 55-ft tubular crank-up.
I need a copy of the manual. US Tower REFUSES to supply it!
Their "company policy" is "we don't support used equipment. If you
want a manual, buy a new tower" (direct quote to me over the phone -
nice guys, huh?). Anyway, I'll gladly pay any reasonable copying costs
or copy your manual and return it. Thanks!

529. BIOEFFECTS ALL OF 9

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 11:50:00 UTC
From: oopdavid@ubvms.cc.buffalo.edu

June 1, 1994

George S. Wilson, III, W4OYI
1649 Griffith Avenue
Owensboro, Kentucky 42301

Dear Mr. Wilson:

The ARRL Bio-Effects Committee writes this letter to detail the series of events leading up to what has developed into an unnecessarily difficult situation to all parties involved. It is not without a certain degree of sadness and disappointment that the Committee feels required to do this recounting, but we feel that the record has become unclear, and it is only appropriate that a correct account be established.

The current membership of the ARRL Bio-Effects Committee was appointed by Larry Price, W4RA, in January, 1990 with the distinctive charge of revitalizing organized amateur radio's concern for the limitation of potential bio-effects hazards that might arise from the participation of individuals in the hobby of amateur radio. The members of the Committee were W. Ross Adey, M.D., K6UI, David Rodman, M.D., KN2M, Thomas Rozzell, Sc.D., WB4ZTT, Samuel Milham, M.D., and Ivan Shulman, M.D., WC2S as Chairman. Wayne Overbeck, Ph.D., J.D., N6NB was appointed as Board Liaison. Since that time, the Committee has worked to re-write virtually all the sections pertaining to bio-effects hazards in all the ARRL publications offered to the public. In addition, the Committee has monitored and reported to the Board on current projects that the Committee has been involved in, including the FCC-EPA study of field strength measurements at various amateur radio installations in Southern California.

In January, 1992 the Chairman of the Bio-Effects Committee wrote to you regarding the appointment of Wayne Overbeck as a full Committee member, as he was no longer on the Board as a Vice-Director. The Chairman also wrote regarding the appointment of a new Board Liaison. The Chairman received no direct response from you in this matter, but was later advised that Mr. Overbeck had been appointed to the Committee after much deliberation.

The Chairman had not been consulted nor advised as to Mr. Price's appointment as Board Liaison until April, 1992, when a copy of a letter that was sent to an amateur expressing concern regarding the safety of amateur radio operation arrived at the Chairman's desk over the signature of Mr. Price, speaking for the Committee. The Chairman voiced his objections to Jay Holladay, W6EJJ, concerning this unilateral action on the part of Mr. Price, as being an inappropriate role for the Board

Liaison to take without consultation with at the least the Chairman of the Committee. The Chairman heard nothing further regarding this matter.

In April, 1992, QST published a photograph and description of an antenna disguised as a curtain rod as a "cute" item to show the cooperative effort of a ham and his new bride. This was not accompanied by any disclaimer as to the inadvisability of the risks of the operation of such a station due to potential bio-effects issues. When the Committee objected to this, a letter from the Chairman was published in QST with the headline "Indoor Antenna: RF Hazard?", with the question mark implying to the Committee that there was editorial doubt as to the veracity of the observations expressed in the letter on behalf of the Committee. The last word on this matter was had by the original operator, W6REF in a letter headlined "Bioeffects Overkill," criticizing the stance of the Chairman as being unreasonable because the power levels being generated at this installation were not known. Such an editorial disregard for the basic tenets that the Committee has espoused seems rather cavalier and inappropriate. The less than subtle captioning of each of these letters, and the lack of editorial insight into the entire issue was very disturbing.

Early in 1993, the FCC issued Docket 93-62, an NPRM regarding the adoption of the ANSI/IEEE C95.1-1992 guidelines on bio-effects. One would expect that the ARRL, as the largest representative of amateur radio operators in this country, would seek the broadest base of opinion from which to develop a position in this matter. Certainly, one would expect that the Bio-Effects Committee would be the appropriate body within the ARRL from which the League would seek such counsel. Even as of this late date, no such request for information from the Bio-Effects Committee has been made.

Failing to receive such an invitation to provide the League with information and advice in this very important matter, members of the Bio-Effects Committee developed a document suggesting a position to be taken by the League in what the Committee expected to be a filing before the FCC. This was sent to the League in November, 1993. The Chairman of the Bio-Effects Committee received absolutely no response from the League on this issue. Mr. Overbeck received a communication from the League acknowledging receipt of the document, but nothing further was heard by any member of the Bio-Effects Committee after that time.

Because of the importance of this matter, and because nothing was sent to advise the authors of the document of a position the League was going to adopt, and because no further input from the Committee had been solicited, and because a deadline in January, 1994 was rapidly approaching, and because of their deep personal and professional concern regarding the importance of this issue, some members of the Bio-Effects Committee made an independent filing to the FCC as individuals, specifically indicating that they were not speaking from their position as members of the ARRL Bio-Effects Committee, but as private citizens.

In February, 1994, the Chairman of the Bio-Effects Committee received a call from Jim Maxwell, W6CF advising that he had been appointed to the position as Board Liaison. Again, the Chairman of the Committee had not been consulted regarding this appointment, not did he receive the courtesy of formal advisement of this from anyone at the League other than Mr. Maxwell himself.

On February 16, 1994, a meeting was held between Mr. Maxwell, Mr. Holladay and the Chairman of the Bio-Effects Committee, reviewing concerns expressed at League headquarters regarding the FCC filing by members of the Committee. During this meeting, a long series of MCI communications was reviewed, at which time several issues were clearly established.

1. There had never been a request from anyone at the League for the opinion of the Bio-Effects Committee, soliciting input on the NPRM in question.

2. After receipt of the unsolicited comments of the members of the Bio-Effects Committee in November, 1994, there was never a reply to the Chairman of the Committee, nor was there any further communication with the Committee by anyone at the League regarding the position to be adopted by the League in their filing. Specifically, no draft of the League's filing was sent to the Committee for comments nor review. The Committee was kept completely in the dark with regard to the League's filing and was not informed in any manner as to any position to be adopted by the League in this matter.

3. Other issues regarding the complete failure of League management to consult with the Committee on proposed QST articles, such as the piece on pacemakers published last year, as well as the episode with the aforementioned antenna were documented.

4. The complete lack of consultation on the appointment of Board Liaison was documented, including the absence of the common courtesy of a formal letter from anyone at the League regarding these appointments.

5. Regret and dismay was expressed to the Chairman regarding these shortcomings and it was stated that these events should not have occurred.

At the close of this meeting, a positive feeling of trust and understanding between the parties appeared to have been established, and Mr. Maxwell expressed a clear desire to improve the communications between the League and the Chairman and members of the Bio-Effects Committee. It is clear however, that this feeling was not reciprocated by others at the League.

On March 1, 1994, the Chairman and the members of the Committee who signed the independent citizen's filing received a FedEx letter, with your stamped signature advising us of your distress in the entire matter of our filing. In the letter you made several statements which strike the members of the Committee as deserving of comment.

While the members of the Committee have no problem with the desire of the League to appear to apeak with one voice on matters before governmental agencies, it is absolutely clear to all except for you, that our filing was "as individuals, and not as representatives of the League". As evidence to support the contention that it is a rather peculiar view to see this filing as a separate voice of the League, is the report by Fred Maia in his W5YI Report of February 1, 1994, clearly restating that these members were speaking as individuals, and not as the ARRL Bio-Effects Committee itself, nor on behalf of the League.

Further adding to the aggravation of members of the Committee is your statement that "members cited their membership on the Committee to bolster their competency to speak to the subject". That you should feel that Drs. Adey or Milham or any other member of the Bio-Effects Committee need the ARRL to establish or burnish their credentials and competency to speak to anyone on this subject is outrageous and insulting.

The absence of a report to the ARRL Board in July, 1993 is an irrelevant issue. In the form letter sent to Committee Chairmen by Mr. Sumner, there is no demand for such a report, and indeed there is no stated charge in any document to support a contention that such a report is mandatory. The Chairman of the Committee is fully aware that reports to the Board can be useful, but the then current activities of this Committee had not changed from the previous report. Furthermore, as clearly established above, there was no request from the League nor the Board to provide anyone with any information regarding the NPRM, so the Committee had not addressed the issue at that time.

The connection between the filing and your decision to dismiss Mr. Overbeck from the Committee is lost on all of the members of this Committee. The full and sole responsibility for the authorization of the "independent filing" is that of the individual who happens to be the Chairman of the Bio-Effects Committee and not that of Mr. Overbeck. As such, it should fall to that individual to bear the full burden of that decision. That Mr. Overbeck is, in the opinion of the Committee itself, the member best able to put the scientific thoughts and concepts of the Committee in legal terms does not place him solely responsible for the actions that follow the expression of those ideas. It appears that the decision to dismiss him is based upon matters which accompanied the reluctance of individuals at the League to appoint him to the Committee in the first place. Furthermore, these appear to relate to events that occurred outside this Committee, and that preceded this appointment by several years. In our opinion, these prior events should have nothing to do with the current situation.

It should be noted that those members of the Committee who signed the filing were not aware of, and had never been advised of any League policy regarding the independent expression of the views of Committee members, particularly in the absence of any objection expressed to our filing by anyone at the League. Furthermore, Mr. Holladay himself was at a loss to provide the Chairman of the Committee with any formal charge by the

League for an ARRL Committee of its duties, until such a document was sent to the Chairman long after the February 16 meeting.

The Committee does feel that the strength of its membership and the authority with which its members are internationally acknowledged to be experts in this field has been ignored by the League in matters of concern. In fact, your term "window dressing" may well be appropriate. There can be no reason other than a desire for "window dressing" to explain the complete absence of any request from the League for information from the Committee regarding this NPRM, the most important governmental proposal that the League has ever had to address on this subject. It appears only logical that the ARRL Bio-Effects Committee might well have been among the first sources of in-house assistance that League officials would have consulted in this matter. As further events have proved, this was not to be the case. The subsequent lack of any substantive communication from the League to the Committee once the Committee's document had been received by the League in November further supports the contention that the views of the Committee have been regarded as superfluous and unwelcome, and perhaps even a liability to any League filing. Furthermore, despite recent promises to improve communications between the League and the Committee, the Committee has even been excluded from the development of a League response during the recently concluded time for reply comments on this NPRM.

Since receipt of your March 1 letter, the Chairman of the Bio-Effects Committee has had repeated communications with Messrs. Holladay, Maxwell, Heyn and Olson in an effort to find a common ground to enable to committee to function once again. The Committee feels that despite the good offices and the best efforts of the aforementioned individuals, the absence of any willingness on your part to directly engage in a dialogue with the Committee to be very disturbing, and is seen as evidence of your lack of understanding of the strong feelings which have been aroused by your actions and those of the League in matters pertaining to the Committee.

Regardless of expectations that the Committee might immediately respond to your March 1 letter in an angry or non-constructive manner, the Committee has instead patiently waited for any sign that some degree of understanding and a desire for a positive resolution of this matter on the part of the League or yourself might be forthcoming. Numerous discussions have been held between the Chairman, members of the Committee and Mr. Maxwell. We have refused to be drawn into a situation where a favorable end result might be impossible. Apparently, we have waited in vain, as nothing appears to have changed.

The only hopeful sign of progress came on the evening of May 1, 1994, when the Chairman of the Committee received a call from Mr. Olson indicating that the Chairman could expect a call from you shortly thereafter, suggesting that you wished to discuss this more directly with the Committee. This information was further corroborated by Mr. Maxwell about a week later. As of this date, a month later, no such telephone call

has been received.

The members of the ARRL Bio-Effects Committee plan to continue to contribute to an understanding by amateur radio operators of the issues relating to the potential bio-hazards of our activities as radio operators, and as such will remain active in our continued review of information and research in this field as it becomes available. We plan to remain available to any and all amateur radio operators who seek our counsel. We further plan to continue to speak out in matters that concern us as individuals and as private citizens as they pertain to our deep and fundamental interest in amateur radio.

We will however, not allow our names to be subject to the political machinations and narrow views of individuals who seek to use us for their own aims or as "window dressing" for you or the League. It would be unfortunate for all amateur radio operators to suffer the repercussions of such a short-sighted view of things, particularly when they may result in long-term negative consequences to amateur radio as a whole. There has been a loss of confidence on the part of the members of the Committee in that you, as President of the League, are clearly not concerned with the continued successful functioning of this Committee, unfettered by extra-scientific and parochial influences. In addition, it is felt that your actions have subjected both the scientific as well as personal integrity of the members to serious compromise. There appears to be no reason that individuals who serve as unpaid volunteers to the League should be subject to such abuse.

We have considered the consequences of our resignation both as individuals and as a Committee as a whole. We stand together united in a common view that you do not see importance of this Committee as originally constituted, that under your leadership, the League has ignored the important resources that the Committee has to offer to all of amateur radio, and that you personally fail to understand the issues of personal integrity that this entire situation has raised.

Therefore, it is with the deepest of regrets that we find that we must submit our resignations as the ARRL Bio-Effects Committee forthwith.

[Signatures by Chairman Shulman of all members]

Hi !

I'll be travelling this summer (between July 23rd and August 15th) in the nothern part of the US [Des-Moines, Minneapolis, Chicago and Detroit].

I have had my TH 78E modified, the CTCSS unit installed and I've received the reciprocal permit.

I am therefore interested in knowing the frequencies and access tones of the UHF repeaters in the area. I seldom do VHF, but I might be interested also.

Thanks, Vince.

PS : Is it possible to buy a cheap 13.8 V power supply, in order to charge the batteries ? Of course I've got one, but it works with 220 V.

Working well. Guess it all depends on your definition of "well".

|> Have you ever actually been a VE? I am,
|> and I know that the vast majority are honest and care about what they
|> do.

Yes, I was a VE, for a little while. Now I can't be part of a system
which I despise.

|> Instead of advocating trashing the
|> whole system, why not join it and work inside it to make sure it's
|> honest? It's not going to change anytime soon.

There is no way to "work inside" it. And, the FCC has made abundantly
clear that they have no interest in the amateur radio service anymore.
Why should I care?

>The Japanese don't seem to have any trouble with the treaty. All it
>would take is for the US to tell the other nations that we are not
>going to honor it anymore... that's what the Japanese did.
>

Not quite true; what the Japanese did was selectively ignore the CW requirement in the treaty in a very limited case, by giving some of their hams voice access to 10m with the restriction of 10w maximum power. They still follow the treaty as it regards the rest of the HF spectrum. And they've been criticized quite heavily by the other ITU nations for doing so.

As for ignoring treaties, I personally can't believe I'm hearing folks advocate that. Why stop with the ITU treaty? Why not ignore every treaty the US ever signed when it's convenient to do so? Of course, if the US starts ignoring treaties, we'd have little standing to criticize other countries (like North Korea) who chose to ignore treaties too. Treaties are the only form of international law that exists; the US could hardly pick and choose which treaties we've signed to enforce or ignore without having the whole idea break down.

And don't forget that it was Japan that decided to ignore treaties it signed when it invaded China, Korea and Pearl Harbor some 50-odd years ago...

Yea, the only ones who seemed to rack up the high scores were the contesters with beams and at least kW amps. I made a few contacts on 10m and 15m with my Butternut vertical and 100W, but nothing to write home about, and all but one (OA4EI on 15m) in the Eastern portion of North America. Even 20m wasn't that hot, though the Russian stations did seem to finally start coming in after around 0300z.

I think it's time for the IARU contest to start having high and low power categories, like the rest of the big contests do. Maybe time for a "antenna farm" vs "wire/vertical/single antenna" category, too. <g>

Oh well, at least I picked up 7 new countries (which is what I was really after) and my first DX on 40m and 80m. 20 more to go for the first DXCC, and hoping conditions are a bit better for the IOTA contest in two weeks.

Last week I purchased a home in Enumclaw, King County. Changing jobs is the reason for going there.

In travelling the area in search of a house I did not see one ham antenna, or one tower, although there are 83 hams in Enumclaw, and I found out later 8 on my street! I thought this kind of strange, but let it pass. I talked to the building department in Enumclaw about towers, and they said that I could do whatever I wanted, they didn't care. But we found out that although the home has an Enumclaw address, it's really in King county. I got the phone number of the King County building department, but it's been continually busy.

Question I have is are there any county-wide restrictions on towers in King county? Is there anything else that I should know?

Appreciate any information. See you on the air.

Does anyone have the scoop on the New England YCCC Packet Cluster?
It's been down since the end of last week when we experienced some
severe thunderstorms here in New England.

I have no idea where "IO" is, but Des Moines is in IOWA (IA).

As for freqs in the DSM area, try 443.400+ (PL 151.4). This one seems to get the most activity here. Other repeaters I know of include 443.500+, 444.050+, 444.150+, 444.350+, 444.500+, 444.575+, 444.625+.

These may not all be in Des Moines, but in surrounding areas, also. I believe they are all open repeaters. (If any require a PL tone, it is 151.4)

>>knowledgable, intelligent person and an asset to the ham community.
>
>What if......
>I couldn't pass the BAR because I didn't know anything about criminal
>law, should I be allowed to practice any law?

Bad example...your ability to send/receive morse code does not represent
any competence which, if you didn't have it, would render you unable to
be a good amateur radio operator. Indeed, your example could, at some
future point, be acceptable if the BAR associations admitted new lawyers
on a specialty basis...i.e. you could know nothing about criminal law but
pass a bar exam on civil law only.

>I couldn't back up a tractor/trailer rig, should I be given an over
>the road truck driver's license?

Good example, the "over-the-road" license is a specialty license and
your inability to drive a tractor/trailer hasn't stopped you from
driving a motor vehicle other than a tractor/trailor. Same can apply
for CW requirements. I've suggested before that we retain 20wpm for
Extra, but the current Extra Class phone privaledges should be moved
to the Advanced license privaledges while retaining the lower 25KHz
as Extra only based on a 20wpm test only.

>I couldn't name all the bones in the body,
>should I be allowed to practice medicine?

Another bad example as such knowledge is critical to being in the medical
field. As said before, competency in CW is not a precursor to being
a good ham.

>I couldn't learn to receive Morse code, should I be
>allowed to get a ham license that would require the code?

That's done today if there's a valid medical reason why one is unable
to pass the relavant CW test for a particular license. The
question is not should you be allowed, the question continues to
be: Is the 13 and/or 20 wpm requirement given too much emphasis
in testing for general and above because it alone is a pass/fail
test of one mode of operation, whereas any other mode (SSB, packet,
etc.) is tested in the written exam and is part of the total
question pool as opposed to a stand alone pass/fail element.

>But I only wanted to......
>practice divorce law.

Per the above, that could happen in the future...why not?

>drive forward.

No comparison to the CW testing on any safety basis, which is
the reason for the specific truck licensing requirement above and
beyond your regular driver's license.

>do brain surgery.

Ditto my coments above, this example is so off the mark as any
kind of analogy with CW for hams. The CW requirement does not
put any ham in a position to "become a radio serice provider"
to the public here your lack of CW knowledge would pose some
threat to anyone you had dealings with.

>talk on the radio.

Indeed, then why does a ham need 13 or 20 wpm to gain access
phone frequencies?

>And I'm a real nice/knowledgeable/intelligent person and would be an
>asset to the legal/truck driving/medical/ham community.
>
>Everything in life has its requirements, we meet those requirements
>or don't participate.
>Earl Morse
>KZ8E

I'm not against requirements that bear a reasonable relationship to
the privaledges gained. Today's CW requirements as pass/fail to higher
privaledges simply don't do that. Make the higher CW requirements
unique to CW frequency usage only and I'd have no problem with them.
5 wpm is more than adequate to keep testing in line with current
international treaties, testing for 13 and 20 on a pass
fail basis to gain HF non-CW
privaledges makes no sense at all. Again, I have no problem with
testing for 13/20 if, and only if, such testing is strictly limited
to gaining access to a select set of CW frequencies only.

I, like many other people that are regular readers of this board recently passed my NO-CODE Technicians exam. Currently, I have been in the FCC holding pattern for 3 weeks, and I'm very sceptical that I am going to see my ticket in the mail in about 11 weeks.

It seems to me that the FCC (Government) does not understand the concept of the Amateur Radio service. If they did, they would put a higher priority on these issues. Everyone knows that Amateur Radio is responsible for providing many hours of emergency radio service during disasters, etc.

I have heard that they are spending in excess of 70,000/vehicle to enforce the rules of the FCC, yet it is outlandish that they only have one person processing applications.

I, like ira@src.dec.com (Ira Machefsky) am sending a note to the powers at be to log my protest in regard to the FCC's lack of effort on the part of Amateur Radio issues. I would like to encourage anyone else who feels that the process needs some improvement to send a similar letter.

Thank you.

I have the rig on 50.130 and squelched so it's silent until something starts happening. There are a few local ops that use 50.125 and give me false alarms.
I've noticed many 6m openings when 10m is dead silent.
I don't operate below 50.130 since 50.125 is the calling frequency, and out here in DN-70 (northern Colo) we don't get much overseas DX, but I'm hoping.

549. Digest of Articles - QST Mar 94 (Long - 53k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 14:49:32 UTC
From: wvanho@infinet.com
Message-ID: <2vuahs$3q1@rigel.infinet.com>
Source record: 263847
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST March, 1994

Following are digests of articles printed in the March, 1994 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:A Lead-Acid Battery Charger
Author>Spencer, Ben C. - G4YNM
Source>QST Mar 94, pp. 25-27
Abstract>Construction of a charger for sealed lead-acid batteries. Its circuitry assures safe charging and automatic shut-off when full charge is reached.

Digest>This article describes the construction of a charger, specifically designed to charge the sealed lead-acid batteries of the type used in burglar alarms, older portable telephones, and other kinds of equipment. Often they are found for sale in hamfest flea-markets.

Charging such batteries requires that the charging voltage must not exceed 2.45 volts per cell, the maximum charge rate must not exceed 15-percent of the battery's ampere-hour rating, and the battery must not be overcharged. The circuitry of this charger is designed to assure that all three limits will not be exceeded.

A schematic diagram is included in the article. The circuit shows a transformer that operates from 120-volt a.c., with an 18-volt secondary. A voltage regulator drops the output to 1.2- to 14.75-volts. The sensing circuit illuminates a green LED to show when the charger is switched on and ready to charge or charging current is flowing. When a partially-discharged battery is attached to the charging terminals, the red light goes out and a green light comes on, indicating charging.

When the battery reaches 90-percent of full charge, the green light goes off, the red light again comes on, the output voltage drops to a low level, and current stops flowing. Protective diodes prevent reverse current flow. Two different charging rates, 1-amp and 3-amps, are provided and selected by a two-position switch, labeled "Standard" and "Rapid".

A PC-board, etched and drilled for this project, is available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269 for a price of $6.00, including USA shipping. A template is available from the ARRL for an SASE. Address the request for Spencer Battery-Charger Template to the Technical Department Secretary, ARRL, 225 Main St., Newington, CT 06111.

Title>TA2:The Pfeiffer Quad-Antenna System
Author>Pfeiffer, Andy - K1KLO
Source>QST Mar 94, pp. 28-31
Abstract>Construction and performance of miniaturized quad beam antennas comprised of two shortened elements made of wire using linear loading.

The size of each element is reduced 45% from that of a full-size quad in one type antenna described, and 58% in the second type. Performance of either is reported equivalent to that of a full-size quad.

Digest>Mr. Pfeiffer has developed miniaturized quad antennas using linear loading techniques. He has settled on two configurations which he calls the "Maltese Quad" and the "Maltese Double-Cross Quad".

The Maltese Cross is the familiar one that was used as identification by the German air force in World War I. The arms of the cross get broader at their ends, so that it looks somewhat like a square with slots cut out from each corner toward the center.

Each element of the author's Maltese Quad uses crossed spreaders, in the conventional quad manner, and wires around the periphery; but at each tip a closed-end stub is inserted that runs down the spreader toward the hub. The two sides of the stub add enough wire that full-wave resonance is reached with much smaller spreaders than those required by a full-size, full-wave square. Whereas a full-size 12-meter antenna requires spreaders to be 14-feet, 2-inches (4.32-meters), measured diagonally corner-to-corner, spreaders for the Maltese Quad for the same band are only 8-feet (2.44-meters), measured in the same manner.

The stubs are supported by what the author calls "yard-arms". These are short pieces of rod fastened perpendicular to each spreader, one at the tip and the other close to the hub. The outer yard-arm must, of course, be an insulator and is made of fiberglass-reinforced plastic (frp). The inner one acts as a shorting bar that forms the shorted end of the stub.

With the Maltese Double-Cross Quad, the author has used the same idea once more; instead of two crossed spreaders, he uses four. The peripheral wires now form an octagon, rather than a square. Again, a stub runs along each spreader with the shorted end not far from the hub and the open end at the tip of the spreader where the wires are attached to the adjacent peripheral wires. Now the reduction in size is even greater. For a conventional 20-meter quad driven element, the diagonal dimension is 25-feet (7.62-meters). Each diagonal across the Maltese Double-Cross Quad is only 10-feet, 4-inches (3.15-meters)!

The article contains a dimensioned drawing labeled as follows:
S - Spreader length from hub to tip
L - Each segment of the peripheral wire, from spreader tip to spreader tip, less the width of the stub
X - The length of the stub
Y - 1/2 the width of the stub
Z - The distance from the center of the hub to the shorting bar, or closed end, of the stub.

Dimensions for the 12-meter Maltese Quad are:
S = 48-inches (1.22-meters)
L = 61-inches (1.55-meters)
X = 36-inches (0.91-meters)

Y = 5-1/2-inches (14.0-cm.)
Z = 12-inches (30.5-cm.)

Dimensions for the 20-meter Maltese Double-Cross Quad are:
S = 62-inches (1.57-meters)
L = 42-1/2-inches (1.08-meters)
X = 47-1/8-inches (1.12-meters)
Y = 3-inches (7.6-cm.)
Z = 15-inches (38.1-cm.)

Mr. Pfeiffer recommends that each element be roughly tuned by itself. To tune the reflector, he used formulas found in the CUBICAL QUAD HANDBOOK, by W. Orr, published by Radio Publications, Inc. It contains the following formulas for calculating the dimensions of an 2-element monoband quad, as follows:

Perimeter, Driven Element: 1000/f
Perimeter, Reflector Element: 1032/f
Element Spacing: 118/f

From this, he noted that for any given frequency, the reflector in a conventional quad must be 3.2-percent longer than the driven element. If the driven element resonates, standing alone, at a particular frequency, the reflector must resonate at 96.90-percent of that frequency. Consequently, he tunes the driven element to the target frequency and the reflector to the frequency correspondingly lower. After both elements are mounted, he tunes the array by adjusting the driven element to establish proper resonance frequency and the reflector to maximize either forward gain or front-to-back ratio, whichever is desired.

He orients the elements with one corner pointing downward and uses that corner for his feed point. The quads are fed using a gamma-match with the gamma-rod running parallel with, and close to, one wire of the stub. A copper strap shorting-bar is adjustable along the length of both rod and stub. An air-spaced variable capacitor connects between the feed-line and the gamma-rod. It and the shorting bar are adjusted alternately to establish minimum SWR in the conventional manner.

The author has systematically evaluated performance of his antennas in cooperation with a friend, Joe Belson - K2ANR, whose QTH is within 60-miles (97-kilometers). K2ANR uses a full-size quad and the two of them have performed many tests comparing the signal-strengths of their signals in various directions, distances, and frequencies, at different times. They both agree that their signals at remote locations are essentially equal, even though Mr. Belson's full-size quad is at a somewhat higher elevation than Mr. Pfeiffer's.

Title>TA3:Using a VU Meter for Phone-Patch Adjustment
Author>Lorona, Alfred - W6WQC
Source>QST Mar 94, pp. 32-33
Abstract>Signal level into a phone-patch is critical and should be

adjusted carefully. Described is the use of a VU Meter to set the gain properly.

Digest>A phone-patch should be adjusted to deliver a signal into the telephone line that is strong enough to be easily understood but not exceeding the maximum allowable signal level. The best way to adjust to that level is with the use of a VU Meter.

This is a special-purpose meter designed to indicate a reasonably accurate value for the peaks of a rapidly-varying voice signal. This requires careful attention to the meter's ballistics; that is, how rapidly it responds to changing levels, and how far it overshoots, if at all. VU Meters are designed and built for this purpose. They are frequently available at hamfest flea-markets and from dealers in electronic surplus.

A VU Meter must be used with a 3900-ohm series resistor in order to perform its proper function. The maximum signal level allowed by the telephone standard is 1.228-volts RMS with a 1-KHz. sinusoidal signal. This is equivalent to minus 9-dBm. or about 0.13-milliwatts.

A standard VU Meter cannot be used, by itself, to measure that amount of signal accurately because it appears so low on the scale that the accuracy is not good. The signal should be amplified by 13-dB. in order to drive the meter upscale into its high-accuracy range.

The article contains a schematic diagram of an op-amp to provide the proper amount of amplification, using a commonly available 741, or similar, op-amp IC. With this amplifier, the VU Meter will indicate 0-dBm. when the signal is actually the desired minus 9-dBm.

With the op-amp driving a VU-Meter, and the patch attached to the phone line, connect the input terminals across the telephone and speak the following sentences twice into the phone: "Joe took father's shoe bench out." and "She was waiting at my lawn." Adjust the gain until the meter indicates 0-dB. as the average of the three highest peaks spoken while those two sentences are read twice. Ignore occasional extreme peaks. The sentences are selected to contain all of the fundamental sounds of the English language.

The author recommends that, before anyone attaches a phone-patch to their telephone line, they should consult the ARRL Handbook regarding phone-patches, and also obtain a copy of FCC Part 68, from the Government Printing Office, and read sub-part D.

Title>TA4:On Center-Fed Multiband Dipoles
Author>Belrose, John S. - VE2CV and Bouliane, Peter - VE3KLO
Source>QST Mar 94, pp. 34-36
Abstract>Results of a study show that a horizontal dipole fed with tuned feeders is the most versatile amateur antenna.

Digest>Since the availability of the WARC bands, amateurs now have eight bands available between 3.5- and 30-MHz. and the use of multi-band antennas has become even more popular than before. A simple dipole, fed with tuned, open-wire feeders is, arguably, the most versatile antenna of all. It can be made of any length but, for good performance on the lowest frequency, i.e. 3.5-MHz., it should not be less than about 100-feet (30-meters) long. A very popular version is one first specified by Louis Varney, G5RV. It is a 102-foot (31-meters) flat-top, fed with 450- to 600-ohm balanced open-wire line or, in a second version, with a 34-foot (10.4-meter) open-wire stub fed at the bottom end with 72-ohm twinlead or coax cable.

In his first published description, G5RV called the stub a "matching section", but later decided that he had made a mistake in doing so. Actually, it acts as a matching section only on the 20-meter band.

The authors have analyzed many variations of center-fed dipoles, both flat-top and also "inverted vees", with special attention to the G5RV design. In addition, they physically tested a G5RV antenna with a stub, erected as an "inverted vee".

The article contains computer plots of the resistance, the reactance, and the SWR across the entire frequency range from 3.0- to 30-MHz. It shows that the flat-top is naturally resonant at 3.49-, 7.52-, 14.15-, 19.5-, and 24.6-MHz. The plots show the very wide range of resistance, reactance, and SWR shown by the antenna at the various frequencies. The stub clearly performs no useful function. They recommend that tuned, open-wire feeders be used all the way from the antenna tuner, located at a convenient place, to the center of the antenna.

On the higher frequencies, the antenna becomes more than one half-wavelength long and the radiation pattern breaks up into multiple lobes in various directions. If the wire is horizontal, all of these lobes are radiated at the same elevation angle; but if the ends droop, in an "inverted vee" configuration, that is no longer true. Some lobes will radiate at relatively low angles and others only at high angles. Consequently, the authors recommend that, for use on higher frequencies, it be mounted horizontally.

Their final conclusions are that the center-fed dipole, mounted as high as possible and as nearly horizontal, fed with tuned feeders, is the most versatile, as well as one of the simplest, of all multiband antennas. However, they also point out that when an antenna is operating on a frequency at which its length is considerably greater than a half wavelength, the radiation breaks up into a number of lobes with nulls at certain azimuth angles. This means that there are some directions, on certain bands, in which the radiated signal cannot be heard! This, then, is no longer a general-coverage antenna. They suggest that, for frequencies higher than 10-MHz., a better general-coverage multiband antenna is a horizontal loop.

Title>TA5:Under the Hood IV: Inductors
Author>Bergeron, Bryan - NU1N
Source>QST Mar 94, pp. 37-40
Abstract>A primer on inductance and inductors.

Digest>This article is an elementary discussion of inductors and inductance. The author describes what they are, how they work, what they do, and the various types that are used in radio. After inductors, he leads into transformers.

Accompanying the article are photographs of typical inductors found in radio apparatus. Included are r.f. chokes; toroidal cores, with and without windings; air wound coils; roller inductors; power transformers; audio transformers; and i.f. transformers.

Mr. Bergeron explains inductive reactance and its effect on electric current; also parasitic shunt capacitance, internal resistance, and the concept of Q.

In a side-bar, three types of variable inductors are described: a coil with a core that can be adjusted in-and-out, a tapped coil with the taps selected by a multi-position switch, and a roller-inductor.

Finally, the color code used for encapsulated r.f. chokes is explained.

PRODUCT REVIEW (PR)

Editor, QST

Title>PR1:QST Compares: Dual-Band Hand-Held FM Transceivers
Author>Ford, Steve - WB8IMY
Source>QST Mar 94, pp. 71-76
Abstract>Performance comparisons of five dual-band FM hand-held transceivers: Alinco DJ-580T, ICOM IC-W21AT, Kenwood TH-78A, Standard C558A, and Yaesu FT-530.

Digest>For FM operations through repeaters, and for short-range simplex, the 2-meter band and the 70-cm. band are nearly equally popular. Dual-band rigs cover both. In this article, Mr. Ford reviews five models: Alinco DJ-580T, ICOM IC-W21AT, Kenwood TH-78A, Standard C558A, and Yaesu FT-530.

All five of the units tested have a number of functions in common. Among these are: band, memory, and program scan; simultaneous dual-band receive; automatic power off; crossband repeater function; CTCSS function; DTMF paging. All transmit a maximum of 2- or 2.5-watts, using the standard battery. All are approximately the same size and four of the five weigh between 13 and 14.4 ounces, battery included; only the Yaesu model deviates a bit, weighing 18.5 ounces.

Alinco DJ-580T

This unit has the lowest list price of any of the five: $519. The average selling price among several QST advertisers is $409. The reviewer found that programming is somewhat difficult and requires frequent consultation of the instruction manual. But the manual is poorly written; its English is poor, and some descriptions are not complete.

When used as a cross-band repeater, some reviewers found that they had to use the low-power output setting on 70-cms. to avoid causing interference on the 2-meter receiver.

The unit offers extended receive coverage, including the upper part of the aircraft band. A simple modification, described by the manual, allows full aircraft band coverage. The unit offers 20 memory channels per band, and eight different scanning functions are supplied. One can scan both bands simultaneously; scan the memory channels; scan within preset frequency limits; etc.

Paging and tone-squelch are standard functions. Also one can be paged using DTMF tones or subaudible CTCSS tones.

ICOM IC-W21AT

This unit offers all of the standard features plus a couple of special functions. One is what their ad writer calls "artificial intelligence" (AI); a key can be programmed to produce the same effect that otherwise would require a number of keys to be pressed in sequence.

Another is automatic output control. When talking through a repeater, the unit measures the repeater's signal strength and reduces its transmit power to the minimum required to maintain communications. The reviewers found that the feature works well with strong signals but, with weaker signals, it must be turned off.

A third special feature that most reviewers liked was the "whisper" function that allows the unit to be held to one's ear and used in full duplex, like talking on a telephone.

The IC-W21AT provides 35 memory channels per band, and several scanning modes. Its 2-meter receive frequency range is broader than the amateur band, but does not include the aircraft band. The list price is $623, which is second highest among the five. An average selling price among several QST advertisers is $514.

Kenwood TH-78A

This unit is noted as the one that has the most programmable features. The negative side of that is that it is correspondingly more difficult to program, even with the manual. After using it for two weeks, none of the reviewers felt that they had mastered the radio.

The operation manual has no index and some of the instructions are not clear. A summary "Minute Manual" is also available, and helps partially to overcome the problem.

Aside from the programming, the unit is reportedly easy to use. The scanning functions are notably flexible. When it is switched to a particular repeater frequency, the unit automatically selects the correct offset frequency. When programming the frequency of a particular repeater, one can add the call sign, or any other 6-character label, into the memory to remind the operator which repeater it is.

The TH-78A provides a DTSS system for remote access and also paging. When it is actuated, by sending the correct DTSS code and glancing at the display, one can not only hear the audio but also see who is paging. An automatic timer will shut down the unit if it transmits continuously for more than ten minutes.

In summary, the reviewers call the unit "an exceptional radio for hams who need its full-featured paging capability and other programmable functions". The list price is $599. Typical average selling price is $449.

Standard C558A

The reviewers commented about this unit's extremely solid "feel", but most commented that the LCD display is small and difficult to read. The frequency digits are large enough, but certain other display items, such as the offset indicator, are almost microscopic. Even the edge lighting does not help very much in dim light.

This unit, like others reviewed, also received criticism for the difficulty in programming, but operation was found to be easy after the radio was programmed.

The C558A comes with 20 frequency memories per band, but it can be expanded to 100 per band! The frequency scanning, also, is quite versatile and includes simultaneous 2-meter/70-cm. scan of the full bandwidth.

This unit's crossband repeater function was rated the best performer among all five. Some receiver desensitization was noted during repeater operation.

DTMF tones can be used for paging this unit, and also the squelch can be set to remain closed until it hears a particular subaudible tone, without requiring a page. A unique feature is a 15-dB. receive attenuator that can be used in an environment (such as a hamfest!) where a lot of H-Ts are in use.

In summary, the reviewers recommend the Standard C558A as a good performer in all respects except for the LED display. Its list price is the highest of the five, at $689. The average selling price is also the highest: $529.

Yaesu FT-530

This Yaesu unit is unique among the five in that it drew praise, not criticism, for its ease of programming. Several reviewers even said that they were able to program basic functions without use of the

manual! But the manual is rated as excellent, written in conversational English. In addition, the ergonomic design is excellent and the display is fully readable in "all" lighting conditions.

It provides 41 memory channels per band. DTMF paging and coded squelch is used. It can even be programmed to acknowledge automatically. Another programmable function is a clock/alarm system that switches on at a preset time.

A battery saver function is provided that reduces power output in response to the received signal strength from a repeater. Also, the status of the battery charge can be checked from the LED display if one pushes the proper buttons.

Several items are included that would be useful for mobile operation of the H-T from an automobile. Among them is an optional remote mike/speaker that contains an LED display of both frequency and signal strength. Also, a VOX circuit is provided in the radio.

The 2-meter receive frequency range is 130- to 170-MHz., which provides a portion of the aircraft band. To listen to aircraft requires a manual actuation of the AM button.

In summary, the Yaesu FT-530 got excellent reviews for easy operating and convenient features. The only reservations expressed were that some reviewers felt that the audio output from the speaker is a bit weak for noisy environments. The list price is $569 and the average selling price is $439.

The editor's summary notes that all the rigs reviewed were found to be quality products. Performance of the radios on alkaline batteries was superior in every transceiver tested. With the advent of rechargeable alkalines, the optional battery cases deserve consideration.

A negative factor common to all five manufacturers was a lack of any caution in the manual regarding crossband repeaters and links. It is absolutely necessary, before establishing a crossband repeater, that great care be taken to see that the repeater frequency selected is not in use for some other service. Simply listening and finding it temporarily unused is no indication that it is, in fact, a free frequency. One should consult the ARRL Repeater Directory and check carefully before attempting repeater operation! Also look at the band plans in the front of the book and make sure that the frequency planned is designated for FM operation. Finally, a check should be made with the local or regional coordinators.

Title>PR2:Trimble Scout GPS Hand-Held Global Positioning Receiver
Author>Wilson, Mark - AA2Z
Source>QST Mar 94, p. 77, 81.
Abstract>Description of the U.S. Global Positioning System (GPS) and the Trimble Scout receiver for automatically determining exact position anywhere on earth via the GPS.

Digest>The Global Positioning System (GPS) was established by the Department of Defense to allow American military personnel to determine their exact location anywhere on the face of the earth at any time. It operates from a number of satellites in orbit, several of which are always within reach of every point on the planet. Recently, the technology has been released for commercial use and the Trimble Scout is one of the latest products made available to consumers.

It is a hand-held device, slightly larger than a scientific calculator, with an LCD display and eight push-buttons on its face. On command, it will display one's precise location in a number of ways: degrees, minutes, and seconds of latitude and longitude; degrees, minutes and hundredths of minutes of latitude and longitude; 6-character Maidenhead grid locators; and a number of other systems designed to be used certain kinds of maps. One can save a location to memory in one coordinate system and later view it in any of the others.

When power is first turned on, the Scout scans for satellite signals and locks on as many as it can find in two minutes. Almost always, it will have little difficulty finding as many as six. Three are required to calculate position in two dimensions. With four, the unit also displays altitude above sea level.

After the satellites are accessed, commands are selected from menus shown on the LCD display. Six menus are available: Location, Navigation, Library, Setup, Route, and Advanced. In the Route mode, one can enter the location of a particular destination and the Scout will calculate its distance and bearing. Also, one can specify any number of intermediate way points and the unit will show the progress being made toward each as the trip progresses.

The Scout will perform many other functions, including some not connected directly with navigation. For example, it will calculate the azimuth and elevation of the moon and other celestial objects at any time.

The manufacturer's list price of the Scout is $795. Accessories available include an external antenna, d.c. power cord, and other items for a list price of $225.

Title>HK1:Cleaning Up the Beep Tone In the Ten-Tec OMNI V Transceiver
Author>Perras, Henry J. - K1ZDI
Source>QST Mar 94, p. 78
Abstract>A circuit that creates a clean "whistle" tone.

Digest>The keypad beep in the OMNI V is a two-KHz. raspy tone that is not "clean". Mr. Perras has designed and built a 2-KHz. bandpass filter using a dual op-amp that generates a clean "whistle".

Schematics are included showing the circuit of the filter, and also where the connection points are located on the OMNI V logic board for the filter leads to be soldered in place.

Title>HK2:Simple Audio Attenuator Solves TNC Overload Problems
Author>Booth, Lionel S. - N5LB
Source>QST Mar 94, p. 79
Abstract>A modified connector containing a 20-dB. attenuator is used between the receiver and TNC to eliminate problem of excessive audio signal level input in a packet setup.

Digest>When input signals from the author's Drake R-4 receiver are adjusted to the low level required by the Kamtronics KAM TNC, the volume is too low for listening. His solution was a 600-ohm pi-section attenuator inserted between the receiver and the KAM input.

It uses three resistors: 3,000-ohms in series with the hot wire of the audio coax; and two of 750-ohms each, connected between the hot wire and the shield, one ahead of, and the other after, the series resistor. It provides 20-dB. attenuation. He built the attenuator inside a piece of copper tubing with a phono plug on one end and a female phono jack on the other.

Title>HK3:Stopping Bug and Paddle Skids
Author>Moretti, Michael - WB2SRL
Source>QST Mar 94, p. 79
Abstract>Suction cups from the hardware store, attached underneath a bug or paddle, stop skidding.

Title>HK4:Is That Hardware Stainless?
Author>Mandeville, Bob - N1EDM
Source>QST Mar 94, p. 79
Abstract>Determine whether hardware is stainless steel by using a magnet.

Digest>The author suggests that one can easily check the hardware in the junkbox to determine whether or not it is stainless steel by using a magnet. He states that stainless steel is not magnetic, whereas most hardware is made of carbon steel that is strongly attracted to magnets.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Maximum Bandwidth Monopole Antennas
Author>Formato, Richard A. - K1POO
Source>QST Mar 94, pp. 80-81
Abstract>A discussion of bandwidth of vertical monopoles of varying diameter. Relatively broad bandwidths can be achieved with large

diameter conductors. Large diameter conductors can be simulated by multi-wire "cage" antennas.

Digest>In this letter, Mr. Formato discusses the operating bandwidth of quarter-wave monopole antennas operating against ground planes. He shows that the useful bandwidth is a function of the diameter of the antenna conductor, itself. He defines the operating bandwidth as the frequency band between SWRs of 2.5:1. This width is much broader for "fat" antenna conductors, that is with diameters an appreciable fraction of the wavelength, than with thin wire.

He further defines the diameter of the antenna as D, the length of a quarter-wave in free space as L, and F(0) the frequency at which the antenna is a physical quarter wavelength. Note that, using these definitions, F(0) is not the resonant point of the antenna; resonance occurs at a few percent lower than F(0).

He shows that with an antenna fed with 50-ohm cable, (1) maximum bandwidth occurs when the ratio of monopole length to diameter (L/D) is 5:1. (2) That bandwidth is approximately 50 percent of F(0). (3) The frequency of minimum SWR is about 1.3 percent less than F(0). (4) Approximately two-thirds of the bandwidth is above F(0) and one-third below it. (5) The SWR minimum is a near perfect 1.009:1.

Such an antenna with dimensions of 4.35 meters (14.27-feet) long and 87 centimeters (2.85-feet) in diameter would cover 13.92 MHz. to 22.57 MHz., including the entire 20-, 17- and 15-meter bands! For such an antenna to perform precisely as calculated, the ground plane would have to be infinite. But, with 16 or more radials a half-wavelength or more long at the lowest frequency, the results would be comparable.

For those to whom a 2.5 SWR is uncomfortably high, the graphs shown with the letter indicate that the bandwidth between 1.5 SWR points is about plus and minus 10 percent around F(0). Hence, at 20-meters, the bandwidth would be 2.8 MHz.!

It is not necessary that the antenna conductor, itself, be solid. A "cage" of wires spaced the appropriate distance apart will behave nearly as well as solid metal. At least 8 wires should be used, preferably more.

Title>TC2:Toroidal-Core Color Codes
Author>Czuhajewski, Michael A. - WA8MCQ
Source>QST Mar 94, p. 81
Abstract>Description of several different color codes used by various manufacturers of toroidal cores.

Digest>The author points out the disconcerting fact that there is no industry-wide color code for powdered-iron and ferrite core materials. Some manufacturers, such as Micrometals, Arnold Engineering, and others, have color codes of their own, some of which duplicate those of other manufacturers is some, but not all, materials.

If one finds a core that is red, it MAY be powdered-iron with a permeability of 10, but it also MIGHT be a ferrite core of permeability 850, 1800, or 10,000! Be suspicious of any colored core if the manufacturer is not positively known.

LAB NOTES (LN)
Conductor: Steve Ford - WB8IMY
Asst. Technical Editor

Title>LN1:TVI, CATVI, and VCRI
Author>Hare, Ed - KA1CV
Source>QST Mar 94, pp. 82-83
Abstract>Advice on how to eliminate interference from amateur radio transmissions on TV, cable TV, and VCRs.

Digest>This is in the form of a fictitious conversation between Ed Hare, ARRL Lab Supervisor, and Joe Hamm, a ham who is having trouble with RFI. Mr. Hare explains the use of a low-pass filter on the output of an amateur transmitter. Next, he explains TV overload from a transmitter's fundamental signal and recommends installation of a high-pass filter at the TV set. Then, the use of a common-mode choke on the antenna lead to the TV set.

Finally, he discusses the problem of the amateur's 2-meter signal leaking into a cable-TV cable and interfering with Channel 18, which is at 144.0- or 145.25-MHz., depending on the cable company. The cable company is responsible for eliminating leakage into their cable. FCC regulations require that the carrier-to-noise ratio must be at least 40-dB. and the carrier-to-coherent disturbances ratio 47-dB. at the customer's location. But any pickup in the customer's TV set, itself, is nobody's responsibility except the customer's!

If the ham is confident that the transmitter is "clean", and the cable company's cable is within specifications, then it is between the neighbor and the manufacturer of his TV set. For good neighborly relations, the ham should do whatever s/he can to help the neighbor overcome the problem.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular monthly section in QST that concentrates on articles of primary interest to newcomers to ham radio.

Title>NHC1:Worked All Palm Beach
Author>Penn, Morton - WA2STA
Source>QST Mar 94, p. 60
Abstract>A contest sponsored by a local radio club encourages more ham activity by newcomers.

Digest>The West Palm Beach, Florida, Amateur Radio Club faced the challenge that many clubs see; that is that many new technician and novice licensees were becoming members but not getting on the air as much as they could. In order to encourage more active participation by newcomers, the club decided to conduct activities that will draw them in.

They created a contest, limited to novice, technician, and technician-plus amateurs, whether or not they were club members. The Worked All Palm Beach contest was the result. The object was to work as many stations as possible in Palm Beach County. Only five frequencies were authorized for contest contacts: 28.150 (CW), 28.400 (SSB), 144.105 (CW), 144.205 (SSB), and 146.55(FM) MHz. All contacts had to be Simplex, no repeaters allowed. Each station had to exchange signal report, its municipality, and a contact number.

Requiring all contacts to be on single frequencies, thereby insuring pileups and QRM, was done deliberately. The intent was to give the newcomers experience in operating under congested conditions.

The net result was highly successful and caused increased participation by numbers of newcomers.

Title>NHC2:Getting Started on the Magic Band
Author>Neubeck, Ken - WB2AMU
Source>QST Mar 94, pp. 61-63
Abstract>How to get started on the 6-Meter band.

Digest>The 6-meter band, (50-54 MHz.), is called the "Magic Band" by many hams who use it, but others call it the "Forgotten Band" because of its lack of usage. One of the most exciting aspects of 6-meter operations is the frequent availability of Sporadic-E propagation. It is intermittent, almost unpredictable, most exciting when it occurs, and is independent of the sunspot cycle.

Sporadic-E is caused by ion clouds that form in the E-layer of the ionosphere. They occur most commonly in the summer months, but occasional openings occur during all seasons. When the clouds are present, they act as super-efficient reflectors of radio signals and long-distance QSOs are possible with very low power and modest antennas.

In addition to distance communications, 6-meters is also an excellent local band. With 50-watts and a modest antenna, the author suggests that contacts over a 100-mile radius are very reliable.

Title>NHC3:The Doctor is IN
Author>Various
Source>QST Mar 94, p. 64
Abstract>Questions and answers of interest to newcomers.

Digest>This month's column answers questions about: interference caused by transmitter harmonics, and what to do about them; the balun in an

antenna tuner that heats up during transmissions; a glossary of ham jargon; and incidental transmission of music from an autopatch when the caller is put on "hold".

Title>NHC4:PACSATs From an Apartment!
Author>Schliemann, Dieter K. - KX4Y/ZS6BBH
Source>QST Mar 94, pp. 65-66, 69
Abstract>Operating via satellites from a temporary location using indoor Yagi antennas.

Digest>The author is a satellite enthusiast and operated two yagi-antennas on a common boom, for 2-meters and 70-cms., to work PACSATs. Recently, at a temporary location, he set them up in an unused bedroom. He was very gratified to find that the setup worked fine and he was successful in working Oscars 22, 23, and 25 with his indoor setup.

Title>NHC5:Plug Into PacTOR
Author>Gold, Jeff - AC4HF
Source>QST Mar 94, pp. 67-69
Abstract>The advantages of PacTOR mode.

Digest>In this article, Mr. Gold explains what PacTOR is, what equipment is necessary to operate in the PacTOR mode, what its advantages are, and the fun he has had with it.

Title>NHC6:An Over-the-Dash H-T Mount
Author>Leyson, Herbert - AA7XP
Source>QST Mar 94, p. 70
Abstract>A simple mounting bracket for using an H-T as a mobile rig.

Digest>This article describes a very simple mounting bracket into which the author hangs his H-T so that it can be used as a mobile rig while driving. It is bent out of coat-hanger wire, and after being formed to shape, it is covered with plastic tubing slipped over the wire. It is a square-ended "U-shape" with hooks at the top end that hook into the air vents that direct defroster air onto the windshield. From the vents, the wires extend across the shelf above the dashboard, and bend down over the dashboard for 2- or 3-inches (50- or 75-mm.) to the square end of the "U". The belt clip on the H-T hooks over the bottom of the "U", and the unit hangs vertically in front of the dashboard.

The author states that the transceiver is secure in its mount as its own weight holds it in place, but he can instantly remove it when he leaves the car.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

Title>RT1:Activity Nights
Author>Owen, Mike - W9IP
Source>QST Mar 94, p. 63
Abstract>Regularly scheduled "activity nights" to encourage CW and SSB activity on VHF/UHF.

Digest>Often, on the VHF/UHF bands, it is not easy to have a QSO. In order to encourage more CW and SSB activity on those bands, so-called Activity Nights have been agreed on in various parts of the country. The author lists a table of frequency, day, and time of Activity Nights that have been established somewhere, but does not state where that is. They should be taken as representative, not necessarily everywhere. Each operator should check with others in the area to determine what, if any, times have been set aside in that manner. The examples he lists are:
Band Day and Time
50-MHz. Sunday, 6:00 pm
144 Monday, 7:00 pm
222 Tuesday, 8:00 pm
420 Thursday, 9:00 pm
902 Friday, 9:00 pm
1296 Thursday, 10:00 pm

The author also cautions that most operators will make initial contacts on the established calling frequencies, then QSY to other frequencies for ragchewing. Calling frequencies are:
Band Frequency
50-MHz. 50.125 SSB
144 144.100, 144.110 CW
144.200 SSB
222 222.1 SSB/CW
432 432.1 SSB/CW
902 903.1 SSB
1296 1296.1 SSB/CW

Title>RT2:Operating on the Road
Author>Ford, Steve - WB8IMY
Source>QST Mar 94, p. 70
Abstract>Safety rules for mobile operating.

Digest>Operating on the road is great fun. To be sure that it is also safe, abide by the following rules:
Do not operate your radio when traffic is heavy.
When making an autopatch call, find a place to stop. Don't dial while driving.
When talking on a repeater, pause to listen at the beginning of each transmission to listen for breakers.
Use Simplex frequencies for ragchewing; leave the repeater for

other uses.
Do not use headphones!
When you leave your car, take the radio with you.
Use an outside antenna. "Rubber ducks" inside the car are poor
substitutes.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Amateur Radio Direction Finding in China
Author>Baldwin, Richard - W1RU
Source>QST Mar 94, pp. 22-24
Abstract>Description of an international RDF competition held in China.

Digest>The author recounts his experiences visiting an international radio direction-finding competition that was held in China, near a section of the Great Wall.

The contest was limited to two hours and ten minutes, and all movement was on foot. Competing required both radio acumen and also physical stamina! Teams came from all over the East Asia/Pacific Rim area, and one team came all the way from Bulgaria. The competition was apparently a great success, and a good time was had by all participants.

Title>GI2:Radio Gear of Yesteryear
Author>Shrader, Bob - W6BNB
SourceQST Mar 94, pp. 41-43, 57
Abstract>Basic description of spark and arc transmitters.

Digest>In this article, the author describes the kinds of equipment and radio signals that were transmitted and received in the days before continuous-wave (CW) signals and vacuum tubes. Every ham has heard of spark transmitters, but the author points out that there were three types of transmitters used before vacuum tubes. One was spark, one was arc, and the third was high-frequency alternators.

Spark transmitters generated highly damped waves created when a very high voltage was applied across a narrow air gap and a spark leaped across it. The spark caused a pulse of current that flowed through the primary of a "oscillation transformer" that, connected to the antenna, formed a resonant circuit. The pulse excited that circuit to form an oscillatory current that was highly damped by the loss of power due to radiation from the antenna.

An arc transmitter differed from a spark transmitter in that the arc excited the oscillatory antenna circuit continuously rather than intermittently. Hence it caused a continuous wave, but not one with the spectral purity that later was generated by vacuum tubes and given the name "continuous wave", or CW.

The third type of non-electronic transmitters was the high-frequency alternator transmitter. Everyone is aware that electric power is generated by 60-Hertz alternators. By building machinery with multiple poles and turning them at very high rotational speeds, it is possible to generate pure sine waves mechanically at frequencies up to nearly 100 KHz.! Some of the most powerful transmitters ever built generated pure RF signals in this manner.

Title>GI3:A New Outlook on Ham Radio
Author>Kirkendoll, John - N0KJT
Source>QST Mar 94, pp. 44-48
Abstract>How a blind ham became interested in radio and overcame the problems he faced.

Digest>The author of this article is blind, and this is the story of how he became interested in ham radio. He received a great deal of help from his "Elmers", experienced hams. Now that he has overcome every hurdle on the way to the top in ham radio, and holds an Extra-class license, he is devoting much of his time to acting as an "Elmer" for others.

Title>GI4:Being an "Elmer"
Author>Young, Phillip - WD0CFJ
Source>QST Mar 94, pp. 44-47
Abstract>Personal satisfaction from helping newcomers get started in radio.

Digest>Because of the close connection between this article and the preceding one, it is formatted as if it were a series of side-bars with the Kirkendoll article, above. The author, Mr. Young, acted as the "Elmer" for John Kirkendoll as well as others. He has received great personal satisfaction from his experiences.

Title>GI5:Anatomy of a 10-GHz. Record
Author>Swedblom, Chuck - WA6EXV and Lee, Phil - W6HCC
Source>QST Mar 94, pp. 48-49
Abstract>How a QSO of more than 500-miles was made on 10-GHz.

Digest>On July 18, 1993, two-way exchanges were made on 10-GHz. between Mt. Ashland in southern Oregon, and Mt. Pinos in southern California, not far from Santa Barbara. The distance was 537.3 miles (865-Kms.).

Contributing to the final success was the presence of other hams on other peaks strung out in a line of mountain-tops between the two end points.

Title>GI6:Cellular Radio and the Modern Amateur
Author>Stone, Norman - WG1C
Source>QST Mar 94, pp. 50-55
Abstract>Basic description of cellular radio as it is, and of probable

future developments.

Digest>This article begins with a comprehensive review of cellular radio as it now exists in the United States and other developed countries. In any city of any size in the USA, today, a person can drive anywhere with a phone in the car and talk continuously to another telephone located anywhere.

The author makes clear that the present cellular system is only a beginning. He states cogently: "The developed countries are rapidly moving toward a Dick Tracy wrist-radio for everyone. It will communicate via satellite, or other means, anywhere in the world."

GI7:Title>Wally and Mike: Changing Times
Author>Kearman, Jim - KR1S
Source>QST Mar 94, pp. 56-57
Abstract>History of changes in ham radio over the last 40 years.

Digest>This is a fictional conversation between an experienced ham and a newcomer. The old timer is explaining the state of ham radio 40 years ago, and the impact that each new development had on the hobby.

551. A good Antenna for a 2m Repeater

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 14:59:44 UTC
From: IANR003@UNLVM.UNL.EDU
Message-ID: <199407121524.IAA16636@ucsd.edu>
Source record: 263851

We are trying to identify a good antenna for use in a 2m repeater. The antenna will be about 200ft up in a rather windy area. We would rather find a dual band 2/440 antenna, but will use separates if needed. The old Hy-gain 270 type fiberglass antennas were great, but they are not made any longer. We were using a Diamond of some type, but it did not survive more than 2 years. If the antenna is a dual-band antenna, the 2m portion must have at least a 3dbd gain figure (db compared to a dipole), with a 6dbd being the target. Cost is not too much of a factor.

I would be interested in hearing from any of you with a similar setup - good experiences, bad experiences, or any other comments.

I dont blame you for bragging.

Two meters can be very exciting when you start exploring the different
propagation modes. Actually six meters is also exciting because we
have been getting some nice Sporadic-E openings.

There is plenty of room for fun on the VHF bands.

I have a 55 ft crank-up non-tubular. The manual was just a few sheets
of instructions. I could have guessed what it said. The catalog has
the dimensions for the concrete base recommended for the various
towers. They are probably trying like mad to stay out of court by
not getting involved in used towers and the attendant problems
resulting from used structural stuff safety wise.

Careful Andy - don't confuse the anti-nocodes with us pro-codes; these two groups have a non-empty symmetric difference (recall symmetric difference is defined as [A-B] U [B-A] where A and B are any two given sets). The pro-codes would welcome a periodic code test for renewal.

Also, `loudmouthing' on UseNet is indicated by typing entirely in uppercase - haven't `heard' any of that on here.

Either glued or sonic welded, which amounts to the same thing. The only way I"ve found is to cut the case apart using a very sharp hobby knife. Be very, very careful, as you have to exert a lot of force, and one slip could cost you a finger. The case can be reassembled with glue pretty well, but it will never be perfect. Good luck.

>It seems to me that the FCC (Government) does not understand the concept of
>the Amateur Radio service. If they did, they would put a higher priority on

Unfortunately, what may happen is that the "Powers That Be" in Washington D.C.will turn around and say, "Hey, all of these other services have to pay $50 for license applications. Why, if yours are accepted for free, should you expect any kind of service at all? We're not getting any money from you guys to hire more people, so processing of your licenses costs the government lots of money.

And then maybe another bill to place a fee on the processing of an amateur license will get sent to Congress, like last time. But maybe it will go through and not be rebuffed this time through.

Of course, a little complaining would probably do some good. But remember that we could get more than we bargained for. We're also probably going to have electronic filing within the year, BTW. So hopefully this will streamline the process.

But yes, the wait is currently unacceptably long, and unwarranted. And just wait until the crush that happens when people start sending in their vanity call applications!

Source record: 263863
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

The PB-6 pack is glued together. On at least one of my packs, the
glue joint was weak on one side of the pack. Also the glue joint
appears to be spotty rather than continous around the joint.
I pushed on the joint with a needle nose plyers. That broke the joint.
I then made a tool by bending a ground lug into the shape of an L.
I was then able to slide the ground lug around the joint on three
of the four sides (top surface is not glued).

The pack then opened up. I replaced the cells and wrapped them with
double sided carpet tape and put the case back together.
I used no glue, just the double sided tape.

I had a small amount of damage on the case where the solder lug
slipped, but overall, no worse than scratches from use.

Alternate solution:

Haven't tried this one. I was told that putting the case in the
freezer makes the glue brittle and then the glue joints will break
when hit or pushed on with an object.

The FCC's treatment of Hams may not be the greatest
BUT !!!!!!

realize that unlike 20-30 years ago when the FCC had engineers (who
were often hams) today most of the FCC employees are lawyers.

There approach to ham radio is to say what and why?

Protest too loudly and you will see new rules that can hinder or
eliminate ham radio.

In the 1970s we had severe repeater rules that almost shut all
repeaters down. If only the ones that were 100% legal were on the
air, I don't think that there would have been any repeaters on the air.
Most of us just winked at the rules; the ARRL helped reduce the burden
and hand carried applications to the FCC (one of them was mine for a
club repeater).
We could get back to those days again.

With commerical interests wanting our frequencies (UPS, PCS, etc.)
a perceived lack of technical skill in ham radio operators,
TVI, big antennas, "Microwave Radiation Problems", etc.
we could see ham radio go away if we complain too much.

I am all for opening my mouth but as hams in the past have found out:

Letters to the FCC often backfire into the face of ham radio.

You might try writing to the ARRL and asking them to talk to the FCC.
Whether you are in the league or not; whether you agree with them or
not, they do have a voice.

Joe Wilkes

>Does anyone have any ideas? Tnx and 73/Tony

The term "ham" existed long before radio was invented, long before Columbus discovered America. You've heard of actors "hamming" it up. The term "ham" for an actor derived from the word "amateur" because amateur actors were the ones most likely to ham it up. It was natural that amateur radio operators would be called hams since they are forever amateurs. My English friends pronounce it 'am.

I can't speak for small towns and/or rural areas, but in the Greater Houston area I can't see any reason for hams to get access to emergencies or accidents. (I guess your talking about car wrecks, fires, etc.) Of course there are exceptions -- when hams are specifically called for help.

But if you are wanting to gain access to car wrecks or house fires, don't bother. You will be in the way of the rosponding emergency personnel, and what would you do when you got there? Are you an EMT or firefighter?
I guess my point is: there is no need for hams on the scene of car wrecks and house fires in heavily populated areas.

Now, if this is not what your talking about, disregard my comments.

We do, we do have HF operations in this country similar to what Japan has. Except in our country no license is required. Power is limited to 4 watts AM/12 watts PEP on SSB. Antenna heights are restricted too as is the distance one may "legally" talk to another (150 miles).

Open your eyes people! You have had what you are asking for all the time, right under your noses! No code requirement, HF operations, no license.... That is what you are referring to isn't it? The only difference is that Japan still requires its CB'ers to have a license. I had one once and the FCC issued callsign was KGP-7471. I had the taste of HF operations in that band, got hooked, and saw the privileges offered by amateur radio as an incentive to upgrade. And I did! Held the amateur callsigns of KA5MWD, N1CLS, and KB1LW. Now hold the call WK1V.

Gooly, gee, whiz! We had it all the time and didn't even see it!

Better get yourself a handbook on this subject. For example, Rohn manufacturing has one for their towers. Your questions cannot be answered from the sketchy information you furnished.

Two things affect the strength of any tower. Vertical loading (a result of weight and forces transfered into a down direction, like guy tension) and horizontal loading (the result of wind force). As an example, an 86.6 mph wind "pushes" on every square inch of the exposed (above ground) tower/antennas/rotor/coax/etc with a force of 30 pounds per square foot. And every square inch of EVERYTHING must be included in the calculations.

For towers under 300 feet, most areas of the US are in the 30 PSF (A) zone, according to data (50 year mean reoccurrence interval

charts) subscribed to by reputable tower manufacturers. No area of the US has ANY less expected loading. Some areas of the US can expect 40 (B) and 50 (C) PSF loading. 40 PSF = 100 MPH. 50 PSF = 111.8 MPH. Its exponential. You may note that many crank-up/telescopic tower manufacturers list some number of square feet of antennas that can be used on their towers based on "50 MPH windloading". A 50 MPH wind is nothing. It represents 13 PSF.

If you want to see just how severe windloading is, I suggest you simply look at the elaborate structure supporting any information sign on any highway.

NO tower should EVER be erected without knowing what windload/weigh can safely be resisted by the structure. 85 feet is a serious height and deserves serious study. 200 feet is the limit without special permit from the FAA and that is reduced as you get closer to an airport.

SRR>Newsgroups: rec.radio.amateur.misc
SRR>Organization: University of Maryland College Park

SRR>To all of you who are awaiting licenses from the FCC:

SRR>This word from my buddy John Creel, WB3GXW, the contact for Laurel, MD VEC:

SRR>DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!
SRR>DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!
SRR>DO NOT CALL THE FCC FOR INFORMATION ON YOUR LICENSE STATUS!

SRR>He said that upon his tour of the FCC license processing facility last week,
SRR>they now have SIX computer terminals, but only ONE person processing
SRR>licenses (this is, sadly, true). The FCC may actually consider volunteers
SRR>at some point, but there are certain legalities involved with this that
SRR>have not been circumvented yet.

SRR>He also said that the FCC is receiving upwards of 50 calls a DAY! And that
SRR>in the time it takes to receive a phone call, TWO licenses could be proces-
SRR>sed! The backlog is now at 15,000 Form 610s!!!

SRR>If your application has taken over 26 weeks, contact your testing team, or
SRR>your VEC - but let THEM call the FCC, if necessary.

SRR>Supposedly, the delay is growing BECAUSE so much time is being spent on
SRR>fielding these phone calls (guess who answers them? The person doing the
SRR>data entry, who has to leave the computer to get the damned phone!).

SRR>I do have a question though - haven't they ever heard of answering machines?

I have a question for you. I have heard that there were a group of
volunteers in the Gettysburg, PA area, all of whom are volunteer
examiners, who have volunteered, at no cost to the FCC, to come in
and do data entry, to get rid of this backlog. The FCC turned down
this offer! Doesn't make too much sense. They have VE's and VEC's
handling the testing, so why not VDEP's (Volunteer Data Entry
People!)?? I've been waiting 14.5 weeks now and it's getting
ridiculous. When I took my test, they told me it would be 8 weeks
until I got my license. Then when I had waited 8 weeks, I was told
10 weeks. After 10 weeks, I was told 12 weeks. At 12 weeks,
people were telling me 14 weeks. Now at 14.5 weeks of waiting,
people are saying anywhere from 16 to 17 weeks!! Absolutely
ridiculous!! BTW, in case you and others are not aware, this same
ONE PERSON enetering data into the computer also has to do the
commercial licenses as well! Just think how pissed you would be if

your job and/or livelyhood depended on getting a license that you have to wait 17 or 20 or 26 or who knows how many weeks for??!!

Myles,

During shuttle missions such as this one, there is a large amount of the
"retransmission" time in which no earth-to-ground transmissions are taking
place. As in the previous missions in which a mid-deck and payload bay
module were being used and very few problems were being encountered, when
there is no transmission, the GSFC retransmission frequencies are quiet
and subject to someone else moving in on the frequency (try listening
on 14.295 or 7185 some time). The poeple working at WA3NAN do a great job
of bringing us the missions, and almost always are aware of when there
is someone talking either to the shuttle or the ground. In this case, I
have heard the GSFC group stop transmitting (even in the midst of reading
an element set) until the shuttle transmission was finished.

Unfortunately, not all hams are aware (and some ARE, but don't care), of
the shuttle retransmissions, and frequently transmit close enough to QRM
WA3NAN. It seems to make sense to me that, during quiet times from the
shuttle, the folks at Goddard transmit in order to let others know that
the frequency is occupied. Again, during a mission such as this, those
quiet times are many. Perhaps we might suggest some things that we are
interested in knowing about during shuttle missions that WA3NAN could
transmit during these quiet times. I'm sure they would like to give us

information other than crew biographies over and over. Maybe they could
give background on what type of science is being done on a particular mission.

Just another perspective,

Dave

If the environment is harsh, I'd use a Decibel Products db-314. This is 8 elements on UHF and 4 on high-band. It won't be cheap, but it will survive better than any ham-grade antenna. You'll need the hi-band/UHF coupler if you want to feed it with a single feedline. It normally has two feeds, one for high band and one for UHF. The antenna is about 21 feet long and all aluminum construction. It's 7.5 dB on UHF and about 3 on high band. Good stuff. Decibel Products is in Dallas, Texas. I don't have their number handy, but they should be in the book.

Good luck

My proposal is to require a nocode-tech or higher license to use 11M. Keep the current power restrictions, eliminate the channel-scheme in favor of VFO operation, allow all HF modes, and expand to include the land mobile band (if possible). Now, how to impliment such an idea with all the millions of CB'ers on 11M is another problem.

What a dream to reclaim 11M for amateur-only use.

I have been able to open some battery packs by breaking them open. The advantage is that there is no kerf, that is, gap caused by the cutting instrument. I have found the best way to break the case is to put it into the vise and apply pressure in the right spots. It usually breaks, or cracks along the glue seams. You may have to do some additional prying with a screwdriver to completely open the case. Some battery packs use very strange cells that I have not been able to locate.

Hope this helps.

I do this regularly. My Alinco DJ580 has a "stereo" jack that's ideal for this: UHF goes to the right side and VHF goes to the left. I just use a simple patch cord, stereo 1/8" plug on each end. Levels seem to be about right without any padding or extra amplification.

|> == Tony Pelliccio, KD1NR, VE ARRL/W5YI Tel. (401) 863-1880

I'm responding to this as well as the latter postings on the subject of
the BIO-EFFECTS committee.

First off, I'm a member of the PSAC, consequently, I've had a chance to
see how League committees work(or don't work :-(and also have an idea of
the committee's relationship to the BOD.

It sure seems that the majority of the problems suffered by
the folks on the BIO-EFFECTS committee have to do with lack of communications.
For a hobby that proports(sp?) itself to be a collection of communicators
we do a marvelously poor job. I think there is a fair amount of just
criticism within the resignation letter posted concerning lack of
communications by league staff, and the BOD/President towards the committee.
ON THE OTHER HAND, some of the expectations of the committee chairman
were unreasonable also!

A couple of the complaints were about not being notified about of BOD liason
appointments for the committee. From my experience on PSAC, this particular
complaint is groundless. Every January, the BOD appoints new liasons for the
various standing committees from it's membership, i.e. nominally, every year
each committee potentially gets a new liason. If you want to know who it
is this time...read the BOD minutes! For that matter, the committee chairman
can change and you won't know it unless you get a note from the new chairman!

That is just the way their committee system works.

Another complaint of the committee seems groundless to me also. The fact that they WEREN'T assigned to work on the NPRM. Now would it make sense for them to work on the NPRM, Yep. On the other hand, the BOD, for whatever reason, can choose to move by itself and make decisions without ever consulting their respective committees. These committees are BOD ADVISORY groups. They exist at the pleasure of the BOD, and work nominally on tasks assigned by the BOD. They do also generate some of their own work, but their primary tasks are determined by the BOD. If the BOD doesn't task them with something, there is nothing inherently structurally wrong! Sometimes, for timing reasons, or some other considerations, the BOD may choose to take up a matter an act directly. That is their perogative. In this light, it seems to me that the committee members' expectation of their (the committee's) place within the ARRL structure was extended a bit beyond the reality of the situation. This point seems to re-inforce itself repeatedly in complaints by the chairman in the letter about not being informed of BOD actions or considerations. Hey guys...the committee reports to the BOD, not the BOD reporting to the committee!

All this said, I think the league's handling of the affair was terrible! The quote attributed to George Wilson in a recent ARRL letter concerning the resignation was harsh in the extreme. In fact, if had been directed at me, I'd have been more than just a little pissed off! I don't think anyone's interest were served by the wording of that statement.

Further, George's reaction to the committee's independent reply to the NPRM was wholely inappropriate. We don't sign away our first amendment rights to speak as individuals when we join these committees.(This letter ought to prove that ;-) If the fileing with FCC was truly as individuals, i.e. no affiliation with the committee was mentioned, then the league is simply wrong!

With all this said, I'd like to point out that there IS something constructive that can come from this. Whether you agree or disagree with what I've just said, and especially if you disagree with some of the BOD's or Goerge's actions then your best bet is to get on the phone and yell at your Director about the topic. Let them know what YOU think should occur. There is a BOD meeting THIS WEEKEND!!!!! A phone call to your director in the next couple days might have ASTOUNDING effect...I've already spoken to my director and know his take on the whole subject..why not get a recent QST out and find the appropriate phone number on page 8 and let your fingers do the walking!

589. Need help interfacing 3rd party microphone with ICOM 751

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 20:41:11 UTC
From: jbs@ee.duke.edu
Message-ID: <2vuv57$7se@news.duke.edu>
Source record: 263779

My girlfriend bought me an Azden HS-03 boom-mike headset (eat yer hearts out, guys - it wasn't even my birthday or anything ;-), and I've found that my ICOM 751 doesn't like it. I put a decoupling capacitor in the mike audio line to get rid of the 8VDC that Icom sends down the mike line, but I have another problem: the audio signal produced by this mike isn't nearly strong enough to properly drive the rig.

Not knowing a whole lot about microphones, I called Azden for advice and told them that the 751's manual specifies 12mV for "typical microphone input;" the Azden guy said no microphone produces that kind of level without a preamp.

So I guess my question is this: who produces, in kit or finished form, an appropriate mic preamp module I could put in line? Or, failing that, can anybody provide me a pointer to schematics for a simple and inexpensive preamp circuit I can build myself? The 751 looks for a 600-ohm mic impedence, and the Azden mic is a 500-ohm mic (close enough? I may have gotten those backwards).

My other question is why, when I disassembled the hand mike that came with the 751, did I find nothing resembling a preamp circuit there, if "no mic produces a 12mV level" and yet the hand mike drives my rig just fine?

Any advice appreciated.

Please e-mail responses to jbs@ee.duke.edu.

Thanks in advance!

-joe KD4LLV

:
: Again, he's certified by the FAA, not by just a pilot's organization
: similar to the amateur's ARRL.

First, I apologize if my first garbled response didn't get cancelled in time and made it out.

Second. Jeff, if your point is to hold the FAA up as a shining example of a better way to administer testing than the VE system I think you're going to lose. A DE (Designated Examiner) lives and dies by the money paid directly to him/her by pilot applicants. It doesn't take a genius to see the inherent problem here. All other things being equal, a DE who gains a reputation as being "tough" isn't going to see a lot of applicants and isn't going to make a lot of money. A DE who has a reputation as being "easy" will likely do well.

To make matters worse, most large flight schools have in-house DE's who's only job is essentially testing applicants from that flight school. Often these DE's will also have a financial stake in the school. Again, it doesn't take much imagination to see the potential for problems here.

Now before any other pilots or DE's on the net scream at me, let me also state that I think that, by and large, there are enough checks in the system, and the integrity of most DE's is such that the system does work. If nothing else, the fear of lawsuits that could result from passing an incompetent pilot has some affect. But the system itself is clearly not well designed as a safe, corruption proof system. It, like the VE system, tends to work because of the integrity of the individuals involved, not because the FAA provides enormous levels of protection and oversight.

In fact, I think most people would be surprised the extent to which General Aviation (as opposed to commercial, for hire aviation) is run on the "honor system". And, for the most part, it works. Just like the VE system, for the most part, works. Let's not be like the news media and over-emphasize (and in many cases cause the general public to overreact to) those isolated examples of when it doesn't.

>

I've seen one and played around with it a bit. For starters, it's
advertised as the first HT to be able to teach you how to use it.
From my personal observation, I'd have to say that it nearly hits
the mark.

It has a two-line, ~12 character Alphanumeric display which uses a
5x7 matrix to display the entir ASCII character set - well, except
for the backslash :-). I tried to program one memory channel name
to be C:\DOS but failed due to the lack of the aformentioned character.

It's a nice display. Finally, real characters and not those cheesey
7-segment imitation alphanumerics.

At the press of a button, you can select which operation you want to
perform (like scanning or storing data), and the lower line of the A/N
display will scroll by, telling you what do do for each step. This is
in plain text, with upper/lower case and punctuation. Cool! It's a
big improvement over those little condensed cheat sheet command
reference cards and booklets that you get with other radios.

It is a very light radio, but mostly plastic of course. The stock
battery is a 6 or 700mAh jobbie which looks very wimpy. Naturally,
Kenwood designed a new battery pack for this one so you'll have to
toss out any and all other kenwood batteries that you already own.

Most of the controls are digital, like squelch for example, and PL
decode is apparently an option (why?).

Other comments: No backlit keypad. Yes, it's a bummer but then I
tried to use the famous FT-530 and found it to be the most confusing
piece of techno-babble-function-key-musical-note-junk that I ever tried
(unsuccessfully) to operate. I'd rather forgo the backlit function
keys in favor of Kenwood's on-line user manual. (Not to start a Yaesu
flame-war here.. but, I'm no hi-tech neophyte. I've operated any and
all types of complex devices and I do read the user manuals. I found
the Yaesu FT-530 impossible to understand, even while reading the
manual. The manual itself states that it's difficult to explain how it
works and so you're best just to play around with it until you figure
it out. I didn't have the time - 30 minutes was all I could take...)

Oh, and back to the TH-79. Well, it will replace the 78, and will probably become a cult favorite. It has a nice feel in the hand and pretty decent receive audio. I didn't try the transmit.

But, I'm still using my W2-A....

Interesting. I guess the only thing I can disagree with you on is it being
a "well known" problem. I have not experienced any such problems with
my R7, but I have not run high power through it either. I guess the
problem may not be commonly known on this coast...

I've worked the world with my R7, and find it works very well on 30 meters.
on 40 it is too narrow to be useful outside a selected subband.

Brian Kantor (brian@nothing.ucsd.edu) wrote:
: My experience with the Ringo antennas is that they're at their best
: when pounded into the soil as a grounding rod.

I just love the net. Everything tends to take on a binary nature, as though the 0's and 1's from the computer were permeating the thoughts and ideas of those using it. Everything is either great or it's junk with nothing in between.

Ringos are certainly not the best antenna in the world, but they do work and they are *CHEAP*, easy to acquire and put up, and easy to tune. They provide reasonable bang for the buck. As such they do have a place in the world other than as a lousy ground rod :-)

If you want to worry about how well you're going to hear and be heard, then you really only have one major thing to worry about. Get that antenna (any antenna) as high as you can.

My Ringo Ranger II works gangbusters. Not because it's a great antenna, but because it's up reasonably high. A good Comet or Diamond would work better. At three times the cost. When I finally get around to changing over to a dual-band antenna, I'll probably go with a Diamond dual-bander. Until then, I am more than satisfied with the performance of the Ringo for 2 meter FM, especially considering the dollars I've *not* invested in it.

As to ruggedness well... I've only had the antenna up 1.5 years, but it's survived winds that some of my trees haven't. We get serious winds in this part of the world. I've had to repair my dipole many times, but I've never touched the Ringo since it's been up. Again, it's probably not the most robust antenna on the market but it seems to be sturdy enough.

Scott - singing the praises of mediocrity :-)

I heard what I thought to be a machine or something on 29.??? USB yesterday (July 11) at about 1000 Z... it skipped a beat every now and then... I thought it might be someone tapping on a PTT switch as they were listening to music! It was not a tone, just a staticky (is that a word?) click, every .5 seconds or so. I thought it was weird, especially on a particular frequency. Maybe it's the same thing??? Hmmm.... could have military implications, maybe... nowadays, you never know.

BTW, I heard this in Atlanta, GA with our beam stuck pointing south.

> The name "ham" for the radio amateur seems to have an unclear origin.
>
> Does anyone have any ideas?

This is what The Complete Shortwave Listener's Handbook (Fourth Edition)
has to say about the origin of the term (p.169):

"Ham," incidentally, doesn't necessarily relate to the operator's
personality. It's reportedly taken from the British pronunciation
of the abbreviated "Am Radio Operator."

So, in other words, it's coming from the word "amateur" (at least
according to this source). I had wondered about this for a long time
myself. But I haven't come across any other explanation. A friend of
mine has an Encyclopedia Britannica. Maybe I can check that if you want
more detailed information. Let me know if you do.

Not at all... Current hams, and especially the VEs, want to make sure that new ones do, in fact, know what they're doing. This leads to their own convenience and avoids having the FCC step in again. This alone is incentive to be fair in administering the exams.

Consider the question from a different perspective: who would be best qualified to decide if an applicant for a certain license is qualified to hold it? Personally, I'd think that holders of that license would be a pretty good choice.

BTW, many FAA flight examiners are _not_ FAA employees.

As of noon today (Tuesday) it is still going on. KH6HME is S5 at my qth
on the valley floor, over the coastal range from the ocean. That was
with a vertically polarized yagi at my end. k6hsj copied (worked I think)
him from near Fort Ross with extremely strong signals. Later he was working
n6ca on SSB and then left the 144.170 CW beacon running.

Anyone near the coast from San Diego to VE7 ought to keep an eye open.
Aparantly the southern CA <-> Washington/VE7 path was open too. Looks
like a good duct here on the eastern end. Copy on 50 MHz through 1296 has
been reported.

I'm still wondering if my 905 MHz radar QRM was from the Islands or was
shipboard. About all I'm confident of is that it was coming in the duct
and was from the general direction of Hawaii.

Gimmie a break! There is no attempt to hide or obscure
the meaning of the transmission and hence there is no
'ciphering" going on. Codes and Ciphers refer to cryptography,
not to pocket pagers. They are different.

Read the rules. Learn what they say, and then learn what
they mean. First glance, literal interpretations are nearly
always wrong. Slamming down on innocent questions like those
of Mr O'Donnell with strict, narrow, and absolute rulings
does not help ham radio, it hurts it.

Let's do ourselves a favor and let the guy make his pager call
and leave the legal rulings to lawyers and judges.

605. Kenwood TM742 and birdies

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-12 23:09:02 UTC
From: tstader@aol.com
Message-ID: <2vv7qe$7o@search01.news.aol.com>
Source record: 263799

A friend of mine recently acquired from HRO a Kenwood TM742 radio. It comes standard with 2 meters and the 440 MHz band modules. He also added the 220 MHz band module as the third band.

When he took the radio home, he hooked it up to an outside antenna and tried scanning some of the bands thru the VFO. One of the first things he noticed is how many birdies he was hearing on the 2 meter module... inside as well as outside the ham bands.

Thinking he had a defective unit... he returned it to HRO and picked up another one and this time asked if he could have it tested there at the store. Not a problem... they put it on the bench... hooked it up to an antenna and the birdies are there on that one too. I think he has said they are every 100 KHz or so. So they stick it on a dummy load and they reduce in strength significantly. On the external antenna they show up at about a S3 to an S5.... but on the dummy load they are about an S1.... they CAN be heard!

He still has the radio... supposedly Kenwood says that when they are hooked up to a perfect 50 ohm load, the birdies are within spec!

Has anyone else experinced this problem with this radio? It has been around for awhile but being as I didn't have one... I did not pay any real attention to any messages about the problem on the net. I have a 741 and I certainly do not have that kind of problem... mine has 6 and 2 meter and the 400 MHz band modules... could that be the problem?

Anyone have any thoughts about this situation??? Are there any mods for the radio that fixed it? Is there a 742a model that I am not aware of?

Thanks in advance for your thoughts, suggestions and recomendations!

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 JULY AND FORECAST FOR 13 JULY - 15 JULY

IPS Disturbance Warning 18 was issued on 11 July and is current for
interval 15-16 July

1A. SOLAR SUMMARY
Activity: generally

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 083/024

GOES satellite data for 11 Jul
Daily Proton Fluence >1 MeV: 9.3E+05
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 1.8E+07
X-ray background: A6.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Jul 14 Jul 15 Jul
Activity Low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Jul: 085/027

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 11 Jul
Learmonth 02 1111 0101
Fredericksburg 05 05
Planetary 05 05

Observed Kp for 11 Jul: 1100 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
13 Jul 05 Quiet.
14 Jul 10 Quiet to unsettled.
15 Jul 20 Unsettled to active.

2C. MAGNETIC COMMENT
Recurrent coronal hole induced activity due 15-16 July.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
12 Jul normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
13 Jul normal normal normal
14 Jul normal normal fair
15 Jul normal fair poor
3C. GLOBAL HF PROPAGATION COMMENT
None.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
MUFs at Sydney were near predicted monthly values

Observed T-index for 12 Jul: 28

Predicted Monthly T-index for July is 30.

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
13 Jul 30 Near predicted monthly values.
14 Jul 30 Near predicted monthly values.
15 Jul 20 About 10% below predicted monthly values.

4C. AUSTRALIAN REGION COMMENT
Slightly degraded HF propagation conditions likely 15-16 July due to
coronal hole activity.

Really -- when has the FCC "made it abundantly clear that they have no interest" any more? Seems to me they still do their part, and expect us to do ours. The "self-regulating" idea has been part of ham radio from its earliest days.

As for why you should care -- because you're a part of the service. If you don't care about what happens to the amateur radio service, might as well turn in your license, sell your rigs and find another hobby. Let the hams who do care about it do what they can to improve it.

Hi Jim!

I'm guessing we see about 1 ATV related message every three months
or so ... (This has been a banner month!) I don't think we'd have
any luck getting a newsgroup passed.

On the other hand, maybe a mailing list would be a good way to collect
up those people interested and keep them in touch. If, say, ten people
(in the whole wide world) wrote me and told me they were interested,
I'd setup and run the mailing list from here ... Hey! Maybe there already
is a mailing list ???

Isn't the TH-78E the European version of the TH-78A 2M/440
hand-held? I don't know what frequencies are used for TV
in Europe, but I've never seen my TH-78A affect anyone's TV
at all. In fact, my J-Pole is on the same mast as my TV
antenna, just above it.

There are frequencies used inside cable TV systems that fall
in the 2 meter range, though. In some communities, 145.250 is
totally un-usable because of all the leakage caused by poor
cable hardware (or is it cable piracy causing the radiation?).

Just my .02 Lira worth... ;-)

611. Beginner Questions

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 00:14:42 UTC
From: dbrown@CSUS.EDU
Message-ID: <2vvblj$r8m@news.csus.edu>
Source record: 263803

First, I'd like to mention that I have read the FAQ. If I missed something in there re: these questions, pointers are appreciated.

I'm interested in getting my ham license. Actually, I have been for about 10 years, but I'm doing something about it now. I've purchased the No-Code Plus book from Radio Shack (complete question pools for Novice and Technician) and the Gordon West code tapes for 5 wpm and 13 wpm (come as one package). I'm figuring that I'll begin with a Tech+, unless 13 wpm code is easy enough, in which case I'll try for General or Advanced.

I would really like a book that covers the stuff for the licences, but in a different format--something like an actual book on the subject, rather than "these are the answers to the questions they'll ask, and the reasons why they're right." I'd really like something I'd have a chance at finding in a rather well-stocked general bookstore, but any recommendations for such a book would be appreciated.

I'd also like to find a computer program to generate exams using the current question pool. I have AUTOEXAM, but it uses the 1990 pools for Novice and Technician. Other than that, it seems like a nice piece of work; are current question pools available for that program?

In the FAQ, it says that the CW test is administered by playing a QSO and then giving a 10-question multiple choice test on its contents. If the applicant fails to answer at least 7 questions correctly, the examiner looks for at least one minute of solid copy, no errors. In the book, however, it says that the examiner will first look for one minute of solid copy; if it's not there, s/he will administer a 10-question test of either the multiple-choice or fill-in-the-blank variety. Which of these descriptions is more accurate? The former sounds a bit easier.

Other than these tapes, what else might I want to try for learning code? Listening to actual radio stuff is out right now, as I don't have a radio. I'm doing pretty well at 5 wpm so far (about 1/2-way through the course, and still copying 95-100%).

When I think I'm ready, how do I take the test?

Are there any decent Ham shops in either San Bernardino or Riverside county, CA?

Many thanks for any help!

To all radio amateurs

SB SPCL ARL ARLX020
ARLX020 New 2304 distance record

New 2304 distance record

This year's summer VHF opening between Hawaii and California has produced a new 2304 MHz world distance record. On July 11 at 2321 UTC Chip Angle, N6CA, and Paul Lieb, KH6HME, made a two-way CW contact on the band.

The two had spent 13 years attempting contacts on most of the microwave bands before 2304 MHz was finally conquered. Angle says this leaves only 10 GHz left in their quest.

Angle said that the opening continued into July 12 and that Lieb and Russ Sakai, KH6FOO, have been busily working stations on the mainland on 144 MHz, many of them mobile stations with omnidirectional antennas. Lieb also is reported to have worked many stations on 220 through 1296 MHz.

KH6HME is on the Mauna Loa volcano at 8200 feet elevation; N6CA is in Palos Verdes at 340 feet. Distance for the contact was 2468.8 miles. An SSB QSO was attempted for a few minutes on 2304 MHz, but was not completed because the two rushed to 10 GHz to attempt a contact there.

This was an uncommon type of opening, with no elevation restriction on the California end, along with good 1296 MHz propagation, Angle said.

The opening produced another record, too, according to a report from ARRL Technical Advisor Tom O'Hara, W6ORG. KH6HME put his 434 MHz amateur TV transmitter on the air, where it was copied by Gordon West, WB6NOA. West alerted other ATV operators in southern California; the second amateur to copy the fast-scan video from KH6HME was Mike Henkoski, KC6CCC, in San Clemente.

KH6HME did not have ATV receiving equipment with him at the Mauna Loa site but hoped to try for a two-way on July 12.

It gives some indication of transmit power. For a quick demo,
try using batteries to transmit at low and high power, then switch
to a 12 or 13.8 volt supply and transmit at high power.

My Kenwood TH-77 and Icom 27-H both do the same thing.

I'll try the cold/break glue method, then go for more destructive
techniques.

Here's another criteria for selecting HT's: Look for one that lets
you easily replace the cells when they finally die. Icom/Radio
Shack win on that one. Are there any others that use screws? Are
all the aftermarket packs assembled with screws, or do they glue
too?

Perhaps, if you feel so strongly about it, we should have distinctive
calls for no-code licenses, like we did for novices in the old days.
Something like NN3ABC. At least, that way, when I give a car with
call-letter plates a HI on the horn while driving down the highway, he won't
think I'm some yahoo trying to run him off the road.

I've had the TM-742 system (2/220/440) in my car for over a year now,
with high-gain antennas. Mine doesn't have the birdie problem you've
described.

Well, I got mine wet, and the LED stayed on constantly. I disassembled
it and it is a one chip circuit board with a tiny button and led.

I am going to let it dry out and try again. Has anyone ever played
with these things and a spectrum analyzer to get a feeling for what
comes out?

The chip is probably proprietary, but is there any reason to think otherwise?

The unit is 1986 vintage. Unknown model or warranty info. It came with
a used car.

Yeah, I know car alarms are pretty useless. Maybe I need a GPS receiver
and a pk88 wired to my mobile rig. When I get my first $100000 car I'll have
to do that.

>the dimensions for the concrete base recommended for the various

The "problem" I have is that the tower is in three sections (disassembled).
It isn't real obvious where and/or how to route the cable that cranks the
thing up and down. That's why I'm looking for the assembly instructions.
They were "nice enough" to send a copy of their catalog showing the
recommended concrete bases. Seems to me there isn't much difference between
supplying that info and telling me how to route the cranking cable.
I'll certainly never buy another one of their products, and everyone would
be wise to not buy them used unless the owner has the paperwork!

I don't know why people assume that paying for the liscence would encourage
better service. This is true for the private sector but is cewrtainly
not true for the public sector.

Suppose the fee was $25, and it was still a 12 week wait. Would we pay....
yes. Would they have a reason to improve.... not necessarily. After all,
they have a monopoly -- they can charge whatever they want and take
however long they want. Other examples include the motor vehciles dept.
of any state.

NOTE: The Effective Sunspot Number for 11 JUL 94 was 40.2.
The Full Kp Indices for 11 JUL 94 are: 1+ 1+ 0+ 0+ 2- 2+ 2- 2+
The 3-Hr Ap Indices for 11 JUL 94 are: 5 5 2 2 7 10 6 10
Greater than 2 MeV Electron Fluence for 12 JUL is: 1.7E+07

SYNOPSIS OF ACTIVITY

Solar activity was generally at very low levels, with the
exception of a C6/SF from Region 7746 (N11W58). A Type II radio
emission with a speed of 4000 km/s was associated with the
C6/SF flare.

Solar activity forecast: solar activity is expected to be
at low levels.

STD: A very weak but noticable enhancement in protons at
greater than 10 MeV has been registered at geosynchronous

altitudes. The enhancement was only about 0.3 to 0.4 pfu above
background levels, but this was sufficient to increase the
daily proton fluence at greater than 10 MeV from the background
value of 1.5E+04 to 2.5E+04 protons / cm^2 - day - ster.

The geomagnetic field has been at quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet to unsettled levels. Active conditions
may occur around 15 July, due to a favorably coronal hole.

Event probabilities 13 jul-15 jul

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 13 jul-15 jul

A. Middle Latitudes
Active 20/20/30
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/20/30
Minor Storm 10/10/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
No changes are expected until 14 or 15 July when a recurrent
coronal hole could elevate levels of geomagnetic and auroral
activity and begin degrading high and polar latitude paths.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max, and end times are defined as: B = Before, U = Uncertain, A = After. All times associated with x-ray flares (ex. flares which produce associated x-ray bursts) refer to the begin, max, and end times of the x-rays. Flares which are not associated with x-ray signatures use the optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

> In today's environment of cellular telephones, trunked radio systems
> with data screens, and nearly universal deployment of FAX machines,
> the NTS people could best serve their community by staying out of the
> way of real emergency personnel doing their jobs.
> - Brian

During hurricane Andrew and miscellaneous less flamboyent disasters, Florida
disaster management officials who **used** to share your opinion discovered
that
1) A typical hand-held cellular phone battery doesn't last nearly as long
as the typical disaster. They weren't prepared for that.
2) Commercial radio networks of all types (cellular phone, trunked radio,
and even police and fire department repeaters) tend to fall victim to
the disasters.
3) Cellular phone networks, in particular, rapidly choke with the volume of
traffic they are asked to handle during emergencies, if they are working
at all. Everyone who owns a celphone seems to think they need to provide
on-the-spot reports to all their relatives, and true emergency
communications can't get through.
4) Despite years of claiming they were working on it, inter-agency
communications capability often just doesn't exist. Fire chiefs of
neighboring communities don't have common frequencies on their radios,
etc.

... and more.

As a result, the state of Florida officially endorses the use of Amateur
Radio as a backup communications medium, to the extent of requiring that
local disaster management plans include plans for the use of Amateur Radio.
Why? Because experience has shown that hams can get messages through when
no other method can. And handle them on a prioritized basis, so the really
important stuff doesn't get choked out by the trivia. Not all of this is
really NTS, but it is all closely related, and the key is that PRACTICE is
important. That, in my mind, is the real benefit of NTS. It provides a
forum where hams can practice moving traffic WITHOUT CORRUPTING IT.
If you've ever participated in a RACES drill where 90% of the hams
participating had never handled formal traffic before, you know that
getting the message through uncorrupted is not something most hams can

do without training and practice.

629. Looking for AM portable handhelds

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 08:15:41 UTC
From: steve@media.mit.edu
Message-ID: <1994Jul13.081541.11072@news.media.mit.edu>
Source record: 263627

I am looking for an AM transceiver, in a frequency above 144.1 MHz.

Does anyone know if an AM handheld unit is available?
(I also need it to be 1 watt or less, for remote control, in
compliance with the power limitation, or easily modifiable down to 1w.)

According to the Radio Shack books, ``All amateur modes and emissions
are authorized above 144.1 MHz. In actual practice, the
modes/emissions used are somewhat more complicated than shown due to
the existence of various band plans and ``gentlemen's agreements''
concerning where certain operations should take place.''

Assuming I were to build my own AM Double Sideband Supressed Carrier
(DSBSC) radio for remote control use, could anyone recommend a
frequency that would be the least bother to other hams, and would also
be free of interference?

Just out of curiosity, why would I be able to work stations farther away simply by upgrading to general? I've worked the Marshall Islands, Japan, United Kingdom, etc. on HF. Somehow the rest of the world will open up for me by upgrading to general? I don't get it. (Incidentally, I'm hoping for upgrading to advanced by Sept. If I can only get over that 10 wpm block...)

There's not much news around this week ...

Logs continue to come for the contest. If you have not sent in your log yet, dont leave it too long. With the vagaries of some of the postal systems, it is not worth risking your log arriving past the deadline.

Some very interesting logs have come in and results promise to be to be surprising, unless changed by further entries still in transit.

News from W.A suggest the Old Timers Club over there is thriving. The club has found a couple of very friendly venues and they appear to have a good social gathering every fort-night. If you have any enquiries about the club, contact Ray VK6PW.

And now news from WIA Federal

Members transferring Divisions

If a member of one Division wishes to transfer to another Division without
changing their state of residence, it is now Federal policy that there is
consultation between the Divisions, except where applicants reside less
than 50 km from a State border or outside Australia.

There has been for many years a "gentleman's agreement" between Divisions

that there will be no "poaching" of members from one Division by another
Division.

The policy was formalised at the annual Federal Convention in Melbourne over April 30th-May 1st. The formal motion noted that the Federal Office had written a letter to certain members advising that they may join any Division regardless of their state of residence, and further noted the adverse effect of this on the Divisional structure.

A WIA member belongs to an individual Division. The Federal WIA, on the other hand, has only the seven Divisions as members. It's a pretty simple structure.

From now, when a member wishes to transfer membership to another Division without changing their State of residence, it is not "automatically" effected by the Federal Office, but both Divisions will be notified and it is then up to the Divisions what action is appropriate.

(Hmmmmmm... Ed.)

IPS weekly report
---
01 July - 07 July 1994
Issue No 27
Date of issue: 8 July 1994

INDICES:
Date 01 02 03 04 05 06 07
10cm 87 83 86 85 83 84 88
A 24 29 17 12 07 15 (15 estimated)
T 39 22 25 30 33 35 46

SUMMARY OF ACTIVITY

Solar activity was very low 1st to 6th July and moderate on 7th.

The geomagnetic field at Learmonth (WA) was quiet to active 1st and 3rd July, unsettled to active on 2nd, quiet to unsettled on 4th and 5th, quiet on 6th, and unsettled to active on 7th.

Ionospheric F2 critical frequencies at Sydney were mostly near predicted monthly values, with 15-40 per cent enhancement during local night on 1st, and about 10 per cent above on 7th.
.
FORECAST FOR THE NEXT WEEK (8 - 14 July)

SOLAR: Very low to low.

GEOMAGNETIC: Unsettled to quiet by the end of the week.

IONOSPHERIC: Near predicted monthly values to about 10 per cent above predicted values.

DX BULLETIN 38 ARLD038
FROM ARRL HEADQUARTERS
NEWINGTON CT JUNE 30, 1994
TO ALL RADIO AMATEURS

THE ITEMS IN THIS WEEK'S BULLETIN ARE COURTESY OF LARRY, WA9MAG, THE NORTHERN ILLINOIS DX ASSOCIATION, JAMES, 9V1YC, AND THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK. THANKS.

HUANGUAY DAO, AKA SCARBOROUGH REEF. THIS WEATHER HAMPERED OPERATION RAN ONLY 14 HOURS. THOUGH LIMITED TO SSB ONLY, NEARLY 2,000 QSOS WERE MADE, NEARLY HALF OF WHICH WERE WITH STATESIDE STATIONS. FOR THE LUCKY FEW, QSL VIA W6CF.

MOROCCO. VALENTINI, IK4JQO, WILL SIGN CN2VA FROM AUGUST 6 TO 22. THIS SSB ONLY OPERATION WILL BE ON 80 THROUGH 10 METERS WITH SPECIAL EMPHASIS ON THE 17 AND 12 METER BANDS. QSL VIA IK4JQO.

GLORIOSO ISLAND. FR5ZQ SHOULD BE ACTIVE DURING JULY AND AUGUST.

HAITI. TELEVISION NEWS AGENCY EMPLOYEES N4MU AND W6RCL ARE ASSIGNED TO PORT AU PRINCE. THEY ARE BOTH ACTIVE SIGNING THEIR CALLS /HH2. BOTH OPERATE SSB ONLY. CHECK 14190 KHZ AT 0300Z.

THE CONGO. RUDI, DK7PE, PLANS TO START HIS ONE WEEK TN OPERATION AROUND JULY 10. THE CALL TN0CW HAS BEEN REQUESTED. QSL VIA DK7PE.

TANZANIA. R3ARES, THE CLUB STATION OF HQ RUSSIAN ARES, HAS MOVED TO TANZANIA FROM YUGOSLAVIA AND IS NOW ON THE AIR AS R3AREX/5H. THE RESCUE TEAM FROM THE RUSSIAN MINISTRY OF EMERGENCY SITUATIONS IS PROVIDING HUMANITARIAN UN AID FOR RWANDA REFUGEES IN TANZANIA. CHECK THE RUSSIAN ARES NET ON 14292 KHZ AT 0700 AND 1700Z. QSL VIA RW3AH.

VIETNAM. PAUL, AA2AV, AND MIKE N KM1R, ARE SUPPOSED TO BE ACTIVE UNTIL JULY 2, HOWEVER OUR LOCAL PACKETCLUSTER NODE HAS NO QSNS AS YET.

SINGAPORE. 9V1ARU OF THE SINGAPORE AMATEUR RADIO TRANSMITTING SOCIETY WILL BE ON DURING THE UPCOMING IARU CONTEST UNDER THE HQ CATEGORY, AN OFFICIAL IARU REGION 3 MEMBER ORGANIZATION. OPERATORS INCLUDE 9V1YC, 9V1ZB AND JE1JKL. THIS WILL BE THE VERY FIRST SINGAPORE MULTI-OP STATION IN AN INTERNATIONAL CONTEST.

STATIONS HEARD OR WORKED FROM NORTHERN ILLINOIS INCLUDE,

All these responses to YOU TOO CAN LEARN THE CODE, tend to paint simplistic pictures of ease that have at their heart that people who can't seem to learn the code are just lazy. Like any thing that one learns (or in this case memorizes), things come easy for some and not for others.

For the past year I have been trying to get up to 13wpm. I practice every day for at least 30min and many days twice for 30min. I can, with 90% accuracy, take 5, 6 or 7 character random code groups (on my computer not with pencil) at 18wpm. However, when I shift to random length code groups, I have trouble even getting 10 wpm at a less than 90% accuracy rate.

I dare defy any one to tell me that I have been lazy in learning the code. I also defy anyone to tell me that it is easy for me regardless of how easy it was for them.

After a close to a year of being able to take fixed length random code groups at 18wpm and still not being able to complete 13 wpm

transmission rate, I'm fairly bored with the entire process. Beeping away is not my idea of fun or challenge. Quite honestly, its just a big bore.

Erich

Well while I know the frustrations of waiting for the ticket, I have to say that the FCC has larger fish to fry than Ham radio. Also, the amateur service has no RESPONSIBILITY for emergency radio service. Hams provide such services but there is no legal expectation or requirement for it.

The time waiting for the ticket can be put to very good use in research. I immediately began to study for the next license grade, plugged away at code, sharpened my understanding of theory, monitored my local repeaters
to learn customs, procedures and styles, and research rigs.

The FCC proposed an instant license mechanism to deal with waiting periods in light of the fact that they don't have direct computer on-line capabilities yet. Your fellow amateurs rejected their proposed scheme as dangerous and unpractical. No, alternative solution was provided that could be implemented in the short time. So, we just live with it.

Good for you! Sounds to me like you're nearly ready to take the test. Remember, you do not have to copy 100%, you just have to answer some questions on content.

BTW, try some different approaches to get your speed up. For instance, try 5 letter groups at 20 or 22 wpm. Try shorter, or longer practice runs. Try plain text at 13 wpm. I too found that if I stuck to a set format, I could copy much faster than otherwise. My approach was to get up to about 75% copy at one speed, then start trying 1 wpm faster. This got me up to 15-16 wpm in 2 or 3 months. I also found random letters and numbers much easier than plain text - I suspect it's because I try to read what's being sent, when I should be copying. Good luck and 73 de N1OOQ

Check out the ARRL publications. The starter book is "Now You're Talking!" (subtitle: "All You Need to Get Your First Ham Radio License.") This is a very good, very readable discussion of all the material that appears in the Novice and Technician exams, presented in a tutorial fashion. Cost is $19. You can get it at most ham-related stores (e.g., any Ham Radio Outlet) or direct from ARRL at 203-666-1541.

For General, Advanced and Extra classes, the ARRL publishes a license manual series. Each book ($12 for General, $8 for Advanced/Extra) gives tutorial coverage of the appropriate material plus the complete text of the questions at the end of the book.

One thing that's good about these ARRL books is the way the exam sections are cross-referenced to the tutorial material. If you can't answer a question, they give you the page number to turn to for the discussion.

Another book worth buying is the FCC Rule Book, also from the ARRL. Cost is $9. You get, certainly, the complete text of Part 97, the FCC rules covering amateur radio, but you also get a lot of common sensical interpretation of the rules, including FAQ's, what about zoning limits on antennas and stuff like that.

> In the FAQ, it says that the CW test is administered by playing a
>QSO and then giving a 10-question multiple choice test on its contents.
>If the applicant fails to answer at least 7 questions correctly, the
>examiner looks for at least one minute of solid copy, no errors. In the
>book, however, it says that the examiner will first look for one minute of
>solid copy; if it's not there, s/he will administer a 10-question test of
>either the multiple-choice or fill-in-the-blank variety. Which of these
>descriptions is more accurate? The former sounds a bit easier.

Each examiner has a fair amount of flexibility in deciding how to run the test so no one can give a blanket answer that will be correct in all cases.

That said, I think the exams I took, given by ARRL VE's at the Boston Amateur Radio Club, were probably typical. They give you headphones and a blank sheet of paper and then play a tape of a short QSO (ham

"conversation"). You copy down whatever you like, whether it's just taking notes on important points (e.g., call signs, transmitter type, locations, power used, etc.) mentioned in the exchange or actually copying the text exactly as transmitted. It's up to you, though most folks try for exact copy.

Then you get a minute or so to go back over what you've written. If you copied "I'm using a _aesu FT-_000", obviously, you fill in that missing "Y" and "1" that common sense tells you must have been there.

Next you get the exam, which is all multiple choice, focusing on the important points in the QSO. Half the questions tend to be difficult, e.g., correctly picking out which of 4 fairly similar callsigns you actually heard, and the rest somewhat easier, e.g., was N1CVD using a Yaesu or a Kenwood radio? (You'd have had to miss a LOT of characters to blow that question!) Since it is multiple choice, obviously, guessing is allowed.

If you don't pass the multiple choice, they'll check over your written copy, looking for that solid minute of copy. But realistically, if you couldn't pass the multiple choice, you probably don't have the solid minute either, is my suspicion.

Because the exams are multiple choice, they are easier than you expect. I was fairly confident when I went in that I could pass 5 wpm, but certainly didn't think I was ready to do better than that. But after passing 5 wpm, the examiners talked me into trying 13 wpm anyway (you pay just one fee, no matter how many tests you take, so the 13 wpm test was "free") and to my amazement, I passed that too.

> Other than these tapes, what else might I want to try for learning
>code? Listening to actual radio stuff is out right now, as I don't have a
>radio. I'm doing pretty well at 5 wpm so far (about 1/2-way through the
>course, and still copying 95-100%).

I have the ARRL code tapes and really like them a lot. Each set of 2 tapes are $10. They cover 0 to 5 wpm ("Your Introduction to Morse Code"), 5 to 10 wpm, 10 to 15 wpm and 15 to 22 wpm. All are recorded in what's called Farnsworth method, meaning the characters are sent at 18 wpm, but spaced out for a slower overall rate. There's also a special 13 to 14 wpm tape that uses standard spacing (useful if you expect to take an exam from someone who, unlike the ARRL VE's, does not use Farnsworth spacing.)

> When I think I'm ready, how do I take the test?

Call around to local ham radio clubs. Here in Boston, the BARC offers open walk-in testing for all classes every month. Other clubs give exams every few months.

If you're not sure what clubs are active in your area, call the ARRL's Educational Activities Dept at 800-32-NEWHAM. They'll send you a printout of all the clubs in your area and a schedule for exams.

> Are there any decent Ham shops in either San Bernardino or
>Riverside county, CA?

Ham Radio Outlet has several stores near you. Anaheim is probably the closest (933 N. Euclid St, 800-854-6046 or 714-533-7373), but you might also check out the stores in Van Nuys (same 800# or 818-988-2212) or San Diego (same 800# or 619-560-4900). Flipping thru QST, I also see ads for Jun's Electronics (5563 Sepulveda, Culver City, 310-390-8003) and Henry Radio (2050 S. Bundy Dr, Los Angeles, 310-820-1234).

Good luck!

641. Re: The Amateur Radio Service is a Joke

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 12:33:43 UTC
From: md@pstc3.pstc.brown.edu
Message-ID: <300mv7$rib@cat.cis.Brown.EDU>
Source record: 263589

In article <387@doghouse.win.net>,
jsalemi@doghouse.win.net (Joe Salemi) writes:

|> Really -- when has the FCC "made it abundantly clear that they have no
|> interest" any more?

Over the past ten years the FCC has done many things to get out of the amateur radio business. First, VE testing. Then, policing the bands. Now, every time you submit a petition they reject it with "amateurs have indicated with their comments in the past that they like the system the way it is." Maybe amateurs would be happy with new proposals. But, the FCC simply throws them away because they could be bothered with the hassle.

|> Seems to me they still do their part, and expect
|> us to do ours. The "self-regulating" idea has been part of ham radio
|> from its earliest days.

Self-regulating doesn't work, especially with growth. (Some people may say that amateur radio's numbers are shrinking, but I think that the number of active amateurs is actually increasing, largely in part to the no-code license.) 27mhz in the 1970's shows us what happens when fear of FCC punishment is lifted. Any complaints sent to the FCC are now forwarded to the ARRL. Great, no punitive regulatory authority there, that will work wonders.

If you have a person jamming your repeater today, you can't get the FCC to lift a finger. Numerous cases have been cited here about troublemakers whom, even after you've caught and they've admitted to it, continue to cause problems. A troublemaker has to interfere with other services before the FCC even takes notice. The net result will be more lawsuits and guerilla warfare as the only way to fight the RF terrorist will become lowering yourself to their level. Someone in this very newsgroup posted how they planted a white-noise generator near a repeater to wreck havoc and get it off the air.

We've got a testing system that is a joke. People selling ham licenses, those willing to "study" simply have to memorize the published question pool. I wonder how my students would do on their exams if I gave them the questions and answers before the examination.

Then we have some pundits crying for virtually no testing or licensing standards. ITS MY RIGHT! I'M BREATHING, AREN'T I?!?

|> As for why you should care -- because you're a part of the service.
|> If you don't care about what happens to the amateur radio service,
|> might as well turn in your license, sell your rigs and find another

|> hobby. Let the hams who do care about it do what they can to improve it.

You're deluding yourself if you think you're going to be the instrument of
change. Amateur radio today is CB radio of the 1970's. Get used to it,
its here to stay.

>reasons why they're right." I'd really like something I'd have a chance
>at finding in a rather well-stocked general bookstore, but any
>recommendations for such a book would be appreciated.

Go back to Radio Shack (or your local ham store) and get a copy of "Now
You're Talking!" from the ARRL. It has tons of information in it that
you need to know, as well as the question pool.

> In the FAQ, it says that the CW test is administered by playing a
>QSO and then giving a 10-question multiple choice test on its contents.
>If the applicant fails to answer at least 7 questions correctly, the
>examiner looks for at least one minute of solid copy, no errors. In the
>book, however, it says that the examiner will first look for one minute of
>solid copy; if it's not there, s/he will administer a 10-question test of
>either the multiple-choice or fill-in-the-blank variety. Which of these
>descriptions is more accurate? The former sounds a bit easier.

Some tests are 10 fill-in-the-blank questions, but all the VE sessions
I've seen and participated in check the answers to the questions
first, and then check for solid copy if you fail on the questions.

> Other than these tapes, what else might I want to try for learning
>code? Listening to actual radio stuff is out right now, as I don't have a
>radio. I'm doing pretty well at 5 wpm so far (about 1/2-way through the
>course, and still copying 95-100%).

There are excellent computer programs around. If you're using an IBM
compatable, look around for SuperMorse or Morse Academy (my personal
favorite). I know there are ones for the Macs, but have no personal
experience with them.
>
> When I think I'm ready, how do I take the test?

Check at a local ham shop or Radio Shack -- they can probably give you
contact information for a local ham club, who either gives the tests
or can point you to someone who does. Also, the ARRL posts a mountly
list of exams around the country (that they know about), that you can
FTP from their server. The info on getting stuff from their server is
usually posted here at least once a month, if not more often.

Good luck!

: Thanx in advance
: Alan
: N1QWT

Mine usually shows about 100 feet of error, which is supposed to
be the norm for the civilian P-code. Error increases with poorer
signal levels and fewer satellites locked-on. What's the
operational situation? Antenna in the clear? Path losses?
Also depends on the specific receiver implementation.

At any rate, more specifics would be useful in determining the source
of the problem.

The elevation wander is constant in mine, and I've seen it wander
as much as four hundred feet above and below a realistic figure. I
presume that's the result of the (intentional) degrading of the
P-code.

645. HELP: Simplex Freq. Poll

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 12:59:04 UTC
From: robb873302@aol.com
Message-ID: <300oeo$bt5@search01.news.aol.com>
Source record: 263590

I am conducting a poll of VHF/UHF simplex frequencies that hams across the nation monitor on a regular or semi-regular basis. Please help me out by EMAILing
me the following information. If you monitor more than one please include that
info also.

Callsign - State - Simplex frequency - PL (if any) - Monitor: Continuously or Occasionally

Example:
N1NTE - MA - 50.400 - none - Occasionally
N1NTE - MA - 52.525 - none - Occasionally
N1NTE - MA - 144.310 - 100Hz - Continuous
N1NTE - MA - 146.520 - none - Occasionally
N1NTE - MA - 446.000 - none - Continuous
N1NTE - MA - 446.100 - 88.5Hz - Continuous

Thanks for you help! Rob, N1NTE >>> Please reply to: RobB873302@aol.com

646. Please read: Ham Radio Bootcamp (Long)

HAM RADIO BOOTCAMP

WARNING! The following ideas are of a radical nature and may cause closed minded
people to scream loudly and form quick, irrational opinions. If you take a minute to look forward into the future (a bright, positive future, that is) you may find that a little effort on your part could improve two hobbies that have more in common than most people think.

I hear many complaints about the No-Code Tech license from a lot of hams. Gripes range from "those glorified CB'ers" to "its not fair I had to learn CW to get my ticket". Well life is a dynamic process and nothing ever stays the same. How would you feel if ham radio never changed? Let's go back to spark transmitters - NOT! I don't know about you but I'd rather be involved in a hobby that offered something new every once in a while. Statistics say that you're not going to please everyone all of the time. The goal is to please most of the people most of the time. And it looks like the No-Coders will end up being the majority very soon.

Another common source of irritation to hams comes from CB'ers. From ham radio's
regulations and gentlemen's agreements, CB seems to be a wild unruly jungle. No license requirements, poor operating practices, illegal operation and lack of FCC supervision give CB'ers free rein of a good size chunk of 26 to 27 MHz. And to top it all off, outbander excursions into the 10 meter band feel like an invading presence into the ham realm.

OK, so what do we do? Well, so far, I don't see much happening. Most feel that one
person's efforts don't amount to much difference, so why bother, right? Wrong! Most
things get started by one person's thoughts and actions and then as it get communicated others try it and so on. You've got to start somewhere and this is somewhere.

IDEA:
Get hams involved in CB radio. (Here comes the screaming!) No really, I mean it. The CB frequencies are frequencies just like hams use. The only difference is that the style of operating that is dissimilar. This is a learned trait and learned traits can be modified. Look at the CB'er who gets his/her ticket and starts talking on 2 meters. Can't you detect slight mannerisms reminiscent of CBing? But after a few weeks or months there's no way you can tell this person from any other experienced operator. All it takes is a little training and practice to improve operating skills. This is what I'm leading up to.

If some forward thinking hams would take the time, set up a decent CB station, talk to a few people who are genuinely interested in communications and MAYBE in becoming a
ham, and give them some on-the-air training, what do you think would happen? Two
things immediately come to mind. One, more interest in ham radio and two, better trained operators once they get their license.

This is how my vision of this plan works and this is by no means set in stone. Joe, K1ABC, reads this article and says to himself, "Hmm, why not!". So, Joe goes down to Radio Shack and picks up a CB radio but being a true ham he builds his own antenna. As he get his station on the air, he begins to get very nauseated listening to all the ridiculous behavior on nearly all the 40 channels.

Until one night at about 9:30 pm after all the "children" are asleep. A small group of three CB'ers are talking on channel 27 about getting their ham license. Joe says, "Aha!" and breaks into the conversation and tells them, "Hi, folks, I'm a ham. Can I help you by answering any questions?". Well, time goes by and its midnight and Joe is beginning to lose his voice. He's made three new friends, gave them the names of some books to pick-up, and has a schedule every 9:30 pm on channel 27 to discuss more ham radio. Joe says to himself, "Gee, that was easy!". The next morning on the way to work he's talking to his buddies on the repeater and tells them what happened. One of the hams suggests they take away his ham license for talking on a CB (half jokingly of course!) Another says "I've got an old CB in my garage, I'll set it up and join you at 9:30".

Well its been a week and Joe is not the only ham on channel 27. He's opened the minds of three other hams who've set up an informal question and answer net. They get about 5 CB'ers on average every night and with many just listening on the side. To participate in this net CB'ers must follow a few operating rules like courtesy and identifying yourself (by real name). The hams must follow rules, too. Number one rule - Talk person to person, not holy ham to lowly CB'er. No condescending tones. (Remember, you WANT them to become hams!) Questions could be about equipment, rules, and even Morse code practice could be covered in such a net. VE's could fill their classes if they hooked up with these enterprising hams. This net gives budding hams the chance to learn proper operating procedure BEFORE they get their ticket.

Imagine if this was done all over the country. All these new operators coming on board with the all the skills necessary to become good ham operators. Not only that, think of how many people you can reach using this method. People who would have otherwise never got involved but did because it was right on THEIR radio. The FCC would have to allocate MORE frequencies for ham radio! Could this improve CB radio as a whole? Maybe. Would it make it any worse? I don't think so. Will it help ham radio? Definitely, YES!

CB radio has some positive things going for it. Its readily available so that no one is
excluded (one of its problems, too). Also, all those who use CB radio have

some degree of desire to be communicators and radio enthusiasts. Isn't this one of the reasons people get their ham license? Not everyone wants to be a ham but why ignore this large pool of potentials who may want to benefit from ham radio and what it can offer?

So, if you're tired of sitting around doing nothing, try talking on the radio. A different radio, that is. If everyone contributes just a little we'd all get quite a lot in return. Do something!Please send your comments and suggestions to me via email - RobB873302@aol.com or write me: Rob Bellville, N1NTE, PO Box 892, Northboro, MA 01532-0892. Thanks for reading!

647. 440 Repeaters in NNJ area?

Sometimes keeping an eye/ear on TV channels 2 or 3 also gives clues about a band opening. Channel 2 is the immediate neighbor in the RF spectrum to the amateur 6M band.

TV Channel 2 is occupied in the Chicago area where I live. When the band opening is strong enough I see the a beat pattern caused by the interfering station. Channel 3 in Chicago is not occupied but depending on the strength of the band opening I can receive signals from as close as Champaign, IL, Kalamazoo, MI, and on rare occasions somewhere in Florida.

I'm not an active 6M user but I have been able to correlate my TV observations with 6M hams at work the next day.

Source record: 263605

I hate to get involved in these CW/no-CW arguments, as they crop up everywhere, but this mail is probably the first one I have ever agreed with ENTIRELY.

I got my class B UK license (no code, VHF and up only) in 1990, and since then wanted to get on HF, to find out what all this DX stuff was. The licensing conditions state that to operate below 30MHz, you have to demonstrate the ability to send and receive Morse Code. That's the rule, and so I started to learn the Morse code.

Towards the end of 1992 I thought to myself 'Hang on - I've been trying to learn this darn code for nearly two years, and I'm still nowhere near the 12wpm required to get a class A license', and I telephoned the Radio Society of Great Britain (RSGB) to get the application form to book a place in the next Morse test, which was three weeks from when I telephoned.

In the next three weeks I did more CW practise than I had ever done in the previous two years, because I had *paid* for the test, and did _not_ want to fail it!

I passed the test, and posted the pass slip to the licensing organisation on Christmas Eve (now that was a nice Christmas present!). On the 9th of January I had my new class A callsign.

I think it was worth it, and although I don't use CW much as a mode, I feel better knowing that I could use it, so when that rare DX appears on CW I would at least stand a good chance of working him/her! (Although I have tried to work TN0CW for 4 days now!!)

The point I am making is that to operate on HF, you need to pass a morse test. Although this test varies considerably from country to country, you still have to take a Morse test.

If you want to operate on HF, take the test. If you are happy not to use HF, then you don't need to take it. If you don't want to learn CW, then get used to using VHF. These are the rules.

Scott

P.S. I didn't want to operate on CW, I wanted to use SSB and digital modes.

A short while ago, JDOW@bix.com said:

>>Seems this is not all that different from what happened to Luck Hurder
>>not long ago. ARRL HQ *SEEMS* to be run by a collection of thought control
>>police it would appear. That is not a nice picture, nie?

To which Luck Hurder retorts:

So! Gone but not forgotten, eh? Chortle.

I confess that I wondered if anybody would see a pattern. This is particularly so with regard to the various external committees that ARRL HQ enjoys forming and then providing virtually zero support to. THIS time, however, they picked the wrong crew to screw with. The folks on the Bio-effects committee were/are exceptionally intelligent, and not in the least bit cowed either by assinine (lack of) policy, OR being absolutely ignored.

ARRL HQ has a very long history of ignoring their committees. Before they fired me in April, I was the staff liaison to one of those committes and I can assure you that they (the committees in general) were rarely thought of as being of any value whatsoever. Sad...

I can think of ONE exception and only then because of a wonderfully-interested and adept
ARRL HQ Staffer who provides proper management and support to that committee. But as for the others, the support is SO minimal that they can seldom even keep Chairmen on board. I seem to recall that the Public Service Advisory Committee, for instance, went through three Chairmen in about as many years. And no wonder.

As for JDOW's comment that it reeks of "thought police" there at HQ, well .... just take a look at the new policy (that got ME fired!) regarding the copying and censorship of all incoming and outgoing electronic mail at HQ!

[good stuff snipped in interests of bandwidth]

From someone who's used CB for lo, these many years (I really had a license at one time--one of the few I knew who ever got one--KFZ9762--could that have been right?), I really appreciate hearing a ham take a measured, reasonable approach to bringing together the ham and CB worlds. Rather than the normal, vituperative diatribe, these recommendations could result in peace in our time.

Thanks for a refreshing, reasoned approach that will take only an investment of time to implement.

Funny how impressions differ. I jumped in around 2300Z, just to see what could be done with 20m. With the TR7 barefoot and a 90-foot wire on an SGC-230, I worked 'em as fast as I could tune 'em. Only one or two state-side stations. I did just about 30 countries in 4+ hours, all on 20. Mostly worked stations on the second or third call.

Agreed, though, that the land above 14Mhz was mostly waste-land. Look at it this way... ...it saves that nagging feeling that 'I really ought to be changing bands.' :-)

So for me, at least, the number of available DX stations overcame the terrible propagation. The only bad thing was that it seemed like the peak conditions on 20m led to really tough band crowding, since there was hardly anyplace to spread out.

>FCC simply throws them away because they could be bothered with the
>hassle.

Which (and let me say that yes I'm an ARRL member) further
emphasises the need to work with some organization that can speak
for a major segment of amateurs. Like it or not, the only such
entity is the ARRL. And, as with any other organization that
holds open elections (i.e for local directors, SMs, etc.) it takes
people willing to get involved. I note that there always is one or
more section that seems to go begging for someone to hold the
position(s). Few, if any, positions are contested.

If the ARRL filed a petition tomorrow, as it has in the past, you
can bet that it'd get far more attention than any filling by an
individual ham.

>|> Seems to me they still do their part, and expect
>|> us to do ours. The "self-regulating" idea has been part of ham radio
>|> from its earliest days.
>
>Self-regulating doesn't work, especially with growth. (Some people may
>say that amateur radio's numbers are shrinking, but I think that the
>number of active amateurs is actually increasing, largely in part to
>the no-code license.) 27mhz in the 1970's shows us what happens when
>fear of FCC punishment is lifted. Any complaints sent to the FCC are now
>forwarded to the ARRL. Great, no punitive regulatory authority there, that
>will work wonders.

Seems to me I've read of numerous (numerous, not many) hams
being fined by the FCC for all types of interference problems,
including interference to repeaters. Does the FCC have lots
of resources to devote to amateur radio complaints...simply

put...no. That's typical governmental enforcement problems,
not enough resourses for the job that should be done.

Self regulating works far more often than you might believe. Does
it work all the time, certainly not, and that's when we need to get
all the fcats straight and properly presented so we can
convince the FCC that a problem exists that must be pursued.
That;s not always easy, nut given the lack of FCC resources,
what else would you suggest we do?

>If you have a person jamming your repeater today, you can't get the FCC to
>lift a finger. Numerous cases have been cited here about troublemakers whom,
>even after you've caught and they've admitted to it, continue to cause
>problems. A troublemaker has to interfere with other services before the
>FCC even takes notice. The net result will be more lawsuits and guerilla
>warfare as the only way to fight the RF terrorist will become lowering
>yourself to their level. Someone in this very newsgroup posted how they
>planted a white-noise generator near a repeater to wreck havoc and get it
>off the air.

See comments above.

>We've got a testing system that is a joke.

Some facts would be helpful to back-up your claim. I'm a VE and
have observed nothing short of a strict adhearence to the rules.

> People selling ham licenses,
>those willing to "study" simply have to memorize the published question
>pool. I wonder how my students would do on their exams if I gave them
>the questions and answers before the examination.

Frankly, memorizing the answers to 300 or more exact questions
strikes me as quite an accomplishment by anyone. Would you prefer
an essay exam? The one area I would agree that can be improved
is the use of applicable formulas...such test questions should
be generic and require a new set of numeric variables for each
test session to avoid memorization on those questions. For many
other questions, memorization is still a big part of the learning
process...that's the only way to learn the FCC rules questions.
The ham band for 80 meters is 3.5MHz to 4.0...tell me how antything
other than memorization leads to having that knowledge to
answer a test question that would ask: What is the 80 meter
amateur band frequencies?

>Then we have some pundits crying for virtually no testing or licensing
>standards. ITS MY RIGHT! I'M BREATHING, AREN'T I?!?

I have seen no such demand and I've been reading this newsgroup for 3 years.
Those that advocate (including myself) changing the CW requirements are
doing so to render the CW to a relationship that takes it out of the
pass/fail priority it now holds and puts it in a context (testing
wise) that is no greater or lesser than knowing any other mode of operation.

>|> As for why you should care -- because you're a part of the service.
>|> If you don't care about what happens to the amateur radio service,
>|> might as well turn in your license, sell your rigs and find another
>|> hobby. Let the hams who do care about it do what they can to improve it.
>
>You're deluding yourself if you think you're going to be the instrument of
>change. Amateur radio today is CB radio of the 1970's. Get used to it,
>its here to stay.
>MD

Then why not turn in your license and stop reading and posting to this
newsgroup so those of us that have a greater opinion of amateur radio
today need not bother with your negativity.

Cheers,

658. August 73 for Ramsey Watchers

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 14:24:33 UTC
From: greg@netcom.com
Message-ID: <gregCsvuox.8MH@netcom.com>
Source record: 263604

Those interested in the progress of Ramsey kits will enjoy August's edition of 73.

Reviewed is the fox-hunt transmitter which uses the same RF section as the FM transceiver. The review pretty much confirms what QST said about the transceiver and what has been said here, before: if you try to put it on the air, it's a REAL good idea to use a spectrum analyzer to see that it's legal. The reviewer's kit-built version, apparently through no fault of his own, was *WAY* out of legal specs. Translation: not a good purchase for the new ham trying to get on the air economically, if s/he doesn't have access to an excellent test-bench.

Also making its first appearance is the ad for the 20m transceiver. Looking at the price, NOT buying the kit seems like a good deal (built isn't all that much more). The copy reads to me like the warranty applies to the 'Assembled and Tested' version only. However, given prices, features, and vendor track-record, I'd look hard at the Ten-Tec Scout in its stead. The very interesting features of the Ramsey rig will appeal to many, however.

Greg

-->>: Summary:
-->>: Keywords:
-->>
-->>The Cushcraft antennas are wonderful with one caveat: the R-7 has a
-->>propensity to blow traps if you use any power level over perhaps 100
-->>watts. This is a very well-known problem with the R-7, and is apparently
-->>inherent in the design.
-->
-->Interesting. I guess the only thing I can disagree with you on is it being
-->a "well known" problem. I have not experienced any such problems with
-->my R7, but I have not run high power through it either. I guess the
-->problem may not be commonly known on this coast...
-->

I have run several RTTY contests with 300-400 QSOs on my R7 pushing
my AL811 amplifier to it's limits (500W or so) with never having lost
a trap. Thats 10-15-20-40 meters. To compensate for it's number of
traps (read heat instead of RF) I almost always use 500-600 W pep on
SSB when I use it. It has been in use 2 years, prior to that an R5.

-->>
-->>The R-5, which is identical except that it does not cover 40 meters and
-->>has better 20 meter bandwidth, does not have this problem.

My R7 has 2:1 SWR bw from 14.090 - 14.290. I use tuner for anything less than
14.050. No biggie.

-->>
-->>Both antennas perform very very well.
-->>
-->>In my opinion the best system is to go with an R-5, and string a dipole,
-->>shortened if necessary, for 40 meters. Except for dxing, often a dipole
-->>does better on 40 due to polarization and angle of radiation (higher).

I often find the R7 is better on 40 to Europe than my inverted V with the
apex around 50'.

-->and -->>The R-5 is a truly wonderful antenna. I've worked the world with mine,
-->>using only 100 watts.
```

-->>
-->>The R-7 is probably OK if you won't be running over 100 watts. I still
-->>would go with the r-5 due to the foregoing.

The R7 is rated full power. I have never had any problem with my 600w pep
or 500w key down RTTY.

-->
-->I've worked the world with my R7, and find it works very well on 30 meters.
-->on 40 it is too narrow to be useful outside a selected subband.

True, but since RTTY section is so small, no problem. Are there other signals on
that band?!

>Mike, N4PDY

I've been successful using a 2", blunt chisel in the slot where the
2 halves join. With a series of sharp blows from a hammer, I have
been able to break the weld, leaving the plastic intact to allow it
to be re-glued (now you see why a *blunt* chisel is required :-).

Good luck,

663. Re: 900 MHz QRM DX record?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-13 15:11:07 UTC
From: glenne@n6gn.sr.hp.com
Message-ID: <CsvwuK.Ap3@srgenprp.sr.hp.com>
Source record: 263603

A follow-up note:

Well, I guess it may be close but probably no cigar for the DX QRM record. I'm quite confident that the radar was coming through the duct but it looks like it was probably from someone "driving through". I got a very useful response from Fred Schader wa7aii, in part:

> One of my co-workers is a Navy ship radar expert. He said that you
> exactly described an air search radar present on Navy ships [SPS-49(V)].
> He believes that your location is a great circle route to the far east
> where these ships often operate this radar. He also has heard of this
> type of propagation at these distances before (sorry no DX record!).
> The ERP of these units is 10MW average and 280 MW peak (that's how to
> get good DX!).

It looks like the strong signals are well explained. Probably, we heard an SPS-49(V) equipped ship chugging through the duct somewhere between us and Hawaii. The nature of the QRM occurrance, high altitude first, and the fading characteristics make me sure that it was duct propagation, possibly as the thing was first forming since it preceded amateur heard reports and QSOs by a couple of days. It also appears that I was hearing backscatter off of the duct itself, unless the radar antenna has a lot dirtier pattern than I'd expect since I was hearing signal from the entire scan.

The fact that we haven't observed it before in a couple of years of monitoring also makes me think it was duct-propagated and that ordinarily this stuff is not turned on when the ships are near the continent. That's probably good news for Part 15 devices! I can imagine what a broadband SS wireless device would think of the main lobe of that thing at close range. Something tells me it would take more than FEC to reduce the bit errors (:>).

I imagine that gathering details about it will take some time, but it certainly has been an intense and long opening. I first heard the radar last Thursday and this morning (Wednesday) the kh6hme 144.170 cw beacon is still pounding in at my interior valley QTH with very little fade. At this rate, I'm going to hear radar from the Navy ship on its return trip!

>recommendations for such a book would be appreciated.

Check out the ARRL publications. The starter book is "Now You're
Talking!" (subtitle: "All You Need to Get Your First Ham Radio License.")
This is a very good, very readable discussion of all the material that
appears in the Novice and Technician exams, presented in a tutorial
fashion. Cost is $19. You can get it at most ham-related stores (e.g.,
any Ham Radio Outlet) or direct from ARRL at 203-666-1541.

Also should be available in Radio Shack stores everywhere.

For General, Advanced and Extra classes, the ARRL publishes a license
manual series. Each book ($12 for General, $8 for Advanced/Extra) gives
tutorial coverage of the appropriate material plus the complete text of
the questions at the end of the book.

These do not cover the (small) part of the material based on FCC
rules, though they do include all the question pools; see below.
. . . .
Another book worth buying is the FCC Rule Book, also from the ARRL. Cost
is $9. You get, certainly, the complete text of Part 97, the FCC rules
covering amateur radio, but you also get a lot of common sensical
interpretation of the rules, including FAQ's, what about zoning limits
on antennas and stuff like that.

This is a necessity. You'll refer to it a lot, as I mentioned, you'll
need it to supplement the three higher level manuals described above.
This is not the case for NOW YOU'RE TALKING, which is complete.

[code tests:]
If you don't pass the multiple choice, they'll check over your written
copy, looking for that solid minute of copy. But realistically, if you
couldn't pass the multiple choice, you probably don't have the solid
minute either, is my suspicion.

Of course if you're confident in your copy, you don't need to take the
multiple choice test. At 5 wpm, one minute is only 25 congiguous
correct characters (it's 100 characters at 20 wpm).
But after

passing 5 wpm, the examiners talked me into trying 13 wpm anyway (you pay just one fee, no matter how many tests you take, so the 13 wpm test was "free") and to my amazement, I passed that too.

In most sessions I've seen, the tests are given: 20 wpm first, then 13, then 5. At least sit for the next test higher than one you're planning to pass; it will help you warm up and get used to the sound, and you might pass it anyway! and if you don't, the next one you take will sound really slow and easy by comparison.

> Other than these tapes, what else might I want to try for learning
>code? Listening to actual radio stuff is out right now, as I don't have a
>radio. I'm doing pretty well at 5 wpm so far (about 1/2-way through the
>course, and still copying 95-100%).

Computer programs like SUPERMORSE for the PC are also a useful tool. (There are also tools for other platforms, most notably the Mac.)

Good luck!

For all who look for a copy of Now You're Talking:

It's sold for $19 everywhere, right?

NO! Don't overlook Radio Shack - they have it for $17 EVERYWHERE!

I'm 99% sure of this price - easy way to save a copule of bucks.
And they're everywhere!

My car doesn't have the CD input, 8-(, but no problem....
Bought a CD to cassette adapter from RS - chuck this into the tape deck, plug the attached patch cord into the external speaker jack. Works great.

Its my understanding that the R5 and R7 use the same traps (i.e. the
10 meter trap on both antennas is the same). If indeed this is the
case, then is it only the 20 and 30 meter traps on the R7 that have
problems? I can't imagine a 15 meter trap on an R7 having a problem
yet the same exact trap on an R5 doesn't.

I can see that you are somewhat frustrated to say the least and not
the least bit lazy. I do not see any where that you got on the air
and had some CW QSO's. I flunked my 13wpm code test the first time
I took it after doing about what you are doing, all practice and no
air time. I took my key after that and plugged it in and had my first
CW QSO. It was really shaky! I then did 2 or 3 CW QSO's a day and also
practiced using SuperMorse for about 20 minutes a day. In no time at all
I was up to 17wpm and able to have some nice contacts on CW! I found this
worked much better then just doing practice as it seemed to burn it into
my brain. I hope you try this method as it a lot of fun besides!

Overheard two hams talking about the TH-79 -- one was pretty amazed and
disappointed that there is apparently no way to mark a memory channel to
be skipped during scanning. The only apparent way to fake this is to
set a PL squelch up in the memory channel.

Bully for Kenwood for including an on-line user manual, although
I would prefer they just made the radio less confusing to operate.

Also, I can't resist a comment:

I don't know that this is a new record. I think this has already been on ham bands done through 5.7 GHz. As I understand it, the struggle at the moment is to get 10,368 MHz signals through and make a 1st QSO there. Evidently the southern California guys, I'm sure n6ca included, have not yet been able to hear kh6hme thus far on 10 GHz in spite of concerted efforts.

I just talked with kk6tg who is going to try from Northern CA this afternoon if he can get it coordinated. He worked kh6hme yesterday from the coast on both 2M and 432 MHz. KH6HME said he was S9+40. KK6TG indicated that it was the strongest signal he had ever heard including locals. In spite of this it took considerable time to make the QSO. The QRM on the Hawaiian end must be horrendous. Bruce (KK6TG) indicated that he couldn't hear him with the antenna disconnected entirely but signals were strong enough that he tried. Bruce was running 10 watts and a 6' yagi on 2M SSB.
His 10 GHz station is several watts and a 2' dish, last I checked.

Inland stations on the east side of California's central valley are hearing and I believe working Hawaiian stations on 2M. It is reportedly providing the strongest signals ever heard from California in Hawaii and stations from at least Washington state to Tijuana Mexico have been worked.

There is evidently a weather system/storm to the west of Hawaii which could threaten the duct but it was reported to be moving *west* at about 12 knots so should become less of a threat. CA weather is fairly stable so this thing may continue for some time yet.

Anytime the government requires a license they can't issue in a timely fashion, that's bearocratic mismanegement, "bungling" in the colloquial. What's a "timely fashion"? Whatever satisfies the people on whom the license requirement is imposed. In this case, I don't think any new Hams are happy about the 17 week delay, as witnessed by the postings here and the many phone calls the FCC seems to be receiving about delayed licenses.

Would I pay a fee for a license? Gladly. I pay or all other licensing, so why not this, too? It's not like this is a cheap hobby. I'm going to go out and spend 100s, probably 1000s of dollars, on this hobby in a lifetime, so what does a small 1 time fee matter to me? And why do you say $105? It seems to me a $10 fee would raise $150K for just part of this year (15,000 license backlog currently). This is a nominal amount that would pay for a bunch of data entry people to reduce the license time.

If our congressional representatives cut the budget without forseeing this difficulty, then they bungled, not the FCC. If the ARRL opposed license fees (which I understand they did), then they bungled. No one is doing me a service by saving me 10 bucks and making me wait 17 weeks.

Regards,
Ira

I wanted the same thing when I was studying. The best I could find was
the ARRL Handbook. You don't just sit down and read it from beginning to
end, of course. You look up the sections that address the stuff that the
exam questions are about.
>
> In the FAQ, it says that the CW test is administered by playing a

>
The last time I took a code test, about 3 years ago, it was fill-in-the-
blank. You can anticipate the questions, as they will almost surely
be about the two operators callsigns, QTHs, RSTs, and first
names -- and maybe WX reports.

> Other than these tapes, what else might I want to try for learning

I think you are ready now, except that it could sure help a lot to copy
some on-the-air QSOs just to see that a lot of them follow a fairly
rigid pattern, and you learn what to expect.

When I went straight for my Advanced from Technician, I took the 13 wpm twice and missed it both times. (Six questions and 63 characters the first time; 6 questions and 64 characters the second. Just under the 65 I needed!) After the second time, I got bored while listening to some guy try the 5 wpm for the fourth time that day, so I copied the last minute and a half on scratch paper and turned it in to get HF priviledges without even looking at the questions.

|> In most sessions I've seen, the tests are given: 20 wpm first, then

Yep, that's how I've always seen it, and listening to faster tests does help! (Of course, it doesn't do much good when you try the 20 wpm...)

Erich,

You already have the 5 wpm, get on the novice bands and mix it up there.
It's a heck of a lot more interesting than listening to random garbage
spewed out by a computer. A couple of real QSOs a day IMHO is worth a lot
more than bashing your brains against any computer. It is a hobby, and therefore
should be relaxing and enjoyable. That includes the learning part.

See ya on the bands! (CW BANDS that is).

That's where I bought one for my parents. I was suprised to see it for less than everywhere else. I wondered if it was different - but the only difference I could find so far is that the one sold at Radio Shack has their name printed in small black letters on the front. Other than that the ones sold at RS are the same as those sold everywhere else.

Actually, there are repeaters, and not *all* outlets are in metro areas.
Here in Northern Colorado, NWS in Denver runs several repeaters along
the Front Range and Northeastern Plains. The stations are ID'd from
Denver specifically as repeaters.

Some outlets are also found in some amazingly remote locations. For
example, one sits somewhere on Navajo Mountain near Lake Powell in
Southeast Utah and can be received most places up and down the lake.
Reasonably remote stuff.

In general, however, it is true that most will be centered around more
populated areas.

Others have posted specific freqs.

Does anyone know if the Kenwood 732a 2m/440 mobile:

1) can be modified for 800 mhz
2) how easy is the mod
3) if it can, how is the performance
4) comments on performance/features in general
5) ideas on availability (currently out of production)

Thanks
Don

This is ridiculous. 6 terminals paid for by you and me and still only
one part-time data entry person. Imagine the folks that have to wait for
real licenses!

OK - it's an election year and, no doubt, congresscritters are looking for
easy problems to fix. Well, one "temp" from an agency for two weeks
oughta make a significant dent in this "problem".

Attached here are the email addresses of the Reps that choose to have
them (or are literate enough to type - the good ol' boy from my district
isn't on the list!).

You can retrieve the paper mail addresses of your local Rep by gophering
to 'gopher.house.gov'. Interestingly, I was unable to find the Senate's
addresses (I didn't spend a whole lot of time with Veronica).

UNITED STATES HOUSE OF REPRESENTATIVES
CONSTITUENT ELECTRONIC MAIL SYSTEM

We welcome your inquiry to the House of Representatives
Constituent Electronic Mail System. Currently, sixteen Members of
the U.S. House of Representatives have been assigned public
electronic mailboxes that may be accessed by their constituents.
The results of the six month public mail pilot have been very

encouraging. The nature and character of the incoming electronic mail has demonstrated that this capability will be an invaluable source of information on constituent opinion. We are now in the process of expanding the project to other Members of Congress, as technical, budgetary and staffing constraints allow.

A number of House committees have also been assigned public electronic mailboxes. The names and electronic mailbox addresses of these committees are listed below after the information about participating Representatives.

Please review the list of participating Representatives below, and if the Congressional District in which you reside is listed, follow the instructions below to begin communicating by electronic mail with your Representative. If your Representative is not yet on-line, please be patient.

U.S. REPRESENTATIVES PARTICIPATING IN THE CONSTITUENT ELECTRONIC MAIL SYSTEM.

Hon. Dave Camp
4th Congressional District, Michigan
Rm. 137 Cannon House Office Building
Washington, DC 20515
DAVECAMP@HR.HOUSE.GOV

Hon. Maria Cantwell

MELMAIL@HR.HOUSE.GOV

INSTRUCTIONS FOR CONSTITUENTS

The list above includes the electronic mail addresses of members who are participating in the program. However, if your Representative is taking part in the project, we request that you send a letter or postcard by U.S. Mail to that Representative at the address listed above with your name and internet address, followed by your postal (geographical) address. The primary goal of this program is to allow Members to better serve their CONSTITUENTS, and this postal contact is the only sure method currently available of verifying that a user is a resident of a particular congressional district.

In addition, constituents who communicate with their Representative by electronic mail should be aware that Members will sometimes respond to their messages by way of the U.S. Postal Service. This method of reply will help to ensure confidentiality, a concern that is of upmost importance to the House of Representatives.

COMMITTEES OF THE U.S. HOUSE OF REPRESENTATIVES PARTICIPATING IN THE ELECTRONIC MAIL SYSTEM.

Committee on Natural Resources
1324 Longworth House Office Building
Washington, DC 20515
NATRES@HR.HOUSE.GOV

Committee on Science, Space, and Technology
2320 Rayburn House Office Building
Washington, DC 20515
HOUSESST@HR.HOUSE.GOV

COMMENTS AND SUGGESTIONS

Please feel free to send electronic mail comments about our new service to the Congressional Comment Desk, at

COMMENTS@HR.HOUSE.GOV

We will make every effort to integrate suggestions into forthcoming updates of our system.

Thank you again for contacting the House of
Representatives' Constituent Electronic Mail System. We are
excited about the possibilities that e-mail has to offer, and will
be working hard to bring more Members on-line and to expand our
services.

This message will be updated as necessary.

Honorable Charlie Rose (D-NC)
Chairman
Committee on House Administration

>There is somebody that can solve my problem ???

Yes, it's possible. We need a bit more information to be of help. First, what TV channel suffers interference? Is it just one channel or all? What frequency are you transmitting on when it happens? One in particular, or all? What does the interference look or sound like on the TV? What kind of antenna is being used on the TV? Is the normal signal on the TV weak or strong?

As I recall, your TV system is all UHF (correct me if I'm wrong). So it's possible that a harmonic of the 2 meter range of the HT is getting into the TV. Or it may be that the TV is suffering fundamental overload from transmissions on the UHF part of your HT. The latter is unlikely unless the TV signal is weak at your neighbor's set, and unless the antennas are really close together. More likely, if you are transmitting UHF when the interference happens, is that your HT has a spur. Low voltage from the AC adaptor could cause this.

We really need to know what the interference looks like on the screen of the TV. That will tell us a good bit about what kind of interference we are dealing with.

DB> >autopatch, control a remote base, or any other similar function. Just

Control codes are used to CONTROL a CONTROLLER, not a commercial service, like a pager service. And most controllers will not pass additional DTMF tones (after initiating a phone patch) up the phone line without some additional "magic" and special knowledge of the controller type used. These "control codes" are usually reservered to "control operators" only to (guess what!) allow them (the control operators) to control the functions of the repeater. Further, if you only send DTMF tones to a phone line (the pager service), you are making a "one-way" transmission which is broadcasting, (since you cannot expect a reply in this case) and broadcasting is also prohibited. And before you take the leap of logic that a control operator is making a one-way transmission when he sends control codes to a repeater remember that the repeater is licensed in the amateur service and control tones are specifically allowed by 97.201(e) and 97.213 for this exact purpose.

You may also think it is legal to call your answering machine and petition it for messages. *NOT*. Also for the same reasons. Plus the fact that you never know just what kind of messages may be there. You might, for example, find a message on the machine from an employer or a business associate.

Use of an autopatch is, on the other hand, a feature of many systems which allow the "users" of the system make a phone call and TALK to SOMEBODY, not to "talk" to a commercial paging service. And you will remember that when using an autopatch, YOU (a licensed Amateur) are in control of what is being broadcast by the person on the phone line. In this case YOU are the control operator and can key up your transmitter to "control" what the (usually a unlicensed "third party", see 97.115(b)(1)) person can be broadcasting on an amateur service. Moreover you can even shut down the patch while that person is speaking. This "control operator" ability is what makes an auto patch legal.

DB> make DB> >sure you are not doing this for business purposes. DB>
DB> In fact, 97.3(c)(5) mentions something about "Incidental tones for
the DB> purpose of selective calling or alerting", so it would seem
that it DB> is not prohibited, only that it is considered a "phone"
emission DB> for purposes of the rules. DB> DB> Dave, KZ1O DB> DB> DB>

Selective calling or alerting is INTENDED to be used to "wake up" an amateur radio receiver, i.e. open the squelch. Such an "alert", for example, might be used in the middle of the night to wake up amateur operators who are expected to respond to some sort of emergency, like a tornado alert. Or to get the attention of another amateur (or group

of amateurs) who do not wish to listen to all the chatter there might be on a busy frequency. There is no such thing as a "TELEphone emission" that is allowed by part 97. Amateurs are confined to communicating with other amateurs except in VERY special circumstances like those discussed above. Paging someone as you suggest is NOT communicating. It is a one-way transmission.

There's no national system in the US, but in some States or localities the presence of a ham tag may, or may not, ease your passage through a roadblock set up to prevent sightseers and looters from entering a disaster scene, depending on how the cop running the roadblock feels about hams. In general though, it's just a vanity plate of a special kind.

Conway-

Back in the 70's, an article was published in QST, describing the "WB4VVF Accukeyer". Follow-up articles provided memory capability. The keyer was quite popular, and eventually appeared in the ARRL Handbook.

Rigs in common usage then, were primarily the grid-block keying variety, with a relatively high, negative voltage on the key line. The Accukeyer output uses a 2N2222 (NPN) driving a high voltage 2N4888 (PNP) transistor, which keys the negative voltage to ground.

When I wanted to update my Accukeyer for a new solid-state TS-120S, I removed the 2N4888 from its socket, and moved the key line to the 2N2222 collector. Now, after many years in that configuration, I find that this modification was really not necessary! With a positive keying voltage, the PNP collector-to-base junction is forward biased, connecting the key line to the 2N2222 collector. Unless a rig requires too high a keying current, has too high a positive voltage for the 2N4888 base-emitter junction or can't stand 0.7 volts diode offset, the Accukeyer output circuit should work quite well with either polarity.

Other transistors that are possible substitutes for a 2N4888 in the Accukeyer configuration, include:

2N398A (Used in Heath HD-10 Keyer)
2N398B
2N1234
2N2042, 2N2042A
2N2043, 2N2043A
2N3495
2N3497
2N4889
2N5400
2N5401
HEP-239 (Now obsolete, Motorola replacement transistor)

> if you use one of these monsters!

My brother got a DX-40 early in his ham carreer, but it wasn't until after
I got licensed that we really had a chance to try it. I was shocked (!) when
I found that the cathode-keyed circuit had nearly 600 (!) volts across the
key contacts key-up. Using a straight key, you'd also see a few small sparks
as you sent. I considered this method of keying to be completely unsafe.
Eventually, I converted the DX-40 to grid-block keying, and it worked pretty
well. Sounded much better with the grid-block, but I did have a problem with
the capacitors in my negative voltage supply occasionally self-destructing.

Source record: 263543

From: Colin Schmutter
I have started taking an interest in the microsats, mainly those with mode J configuration.

I have been monitoring the downlink signals using a J-pole antenna and 70 cm pre-amp (homebrew ARRL handbook designs) and an AOR 2002 scanner set to NBFM to get an idea of the downlink signal strength.

I have found the signals to be very weak using the above and the S meter o receiver barely lights, even at mid pass.

I have monitored LO19, AO16, KO23, KO25 and others and they all seem very weak.

Given the above configuration would this be what I should expect as far as downlink signal strength.

I didn't want to spend any money on modems etc until I am sure that I have the RF
side of things set up correctly.

Any comments would be appreciated.

Scott Richard Rosenfeld (ham@wam.umd.edu) wrote:

: He also said that the FCC is receiving upwards of 50 calls a DAY! And that
: in the time it takes to receive a phone call, TWO licenses could be proces-
: sed! The backlog is now at 15,000 Form 610s!!!

They seem to be getting more behind each week!

: Supposedly, the delay is growing BECAUSE so much time is being spent on
: fielding these phone calls (guess who answers them? The person doing the
: data entry, who has to leave the computer to get the damned phone!).

This is probably 1 of many reasons they are falling behind. My top list of
possible reasons the FCC is falling behind are:

o License renewals are required for the first time in years.
o The FCC has a new computer system (transistion period)
o Where is my license phone calls :-)
O Congressional requests to the FCC as to why it takes so long :-)
o Summer vacations?

Anybody care to add to this list?

: I do have a question though - haven't they ever heard of answering machines?

They do have a phone information system that always seems to be behind. The
call signs given out for June 1 was updated about the 20th of June! Maybe it
would help if they updated it in a more timely manner? (i.e. show progress)

OK, I've been out of touch for a while.* Be gentle. What is this tech+ license I keep hearing about? A new class, or simply code credit to work the HF novice bands? If the former, how do privileges differ from a plain tech?

* I got a tech back before no-code, and had an HF rig. Working 10m and listening to the other HF phone bands eventually made me sell the rig and forget about ham radio. Nothing but &$@#^@ contests and 40 meter CB types. Feh. Anyway, now I'm thinking of playing around with 6 & 2 meters. (Could be another mistake, time will tell.)

BTW, I got my novice back in the '60s when hams actually built stuff, and understood how it worked. Times have changed.

>
>Gary, do you have or can you direct us to any hard data concerning the
>commonly available 2m antennas? You talk about "bang for the buck",
>but I would like to have some more meaningful data to consider.

That's hard to come by. You can't really believe some of the manufacturer's advertising claims, which is why QST stopped printing them, and most antenna measuring contests are either not reproducible, or concentrate solely on the gain of directional antennas. Therefore we have to depend on word of mouth experiences, and on antenna theory, to tell us which omni antennas should work best. It would be interesting and illuminating if the ARRL were to commission a "shootout" between all the major antenna designs, conducted on an independent antenna range. My informal testing and experience says lots of people would be surprised at how their favorite antenna *really* performs.

>A longevity note: My father has had a 2m Ringo in continuous service
>for more than 10 years. He lives in northern Nevada with high-altitude
>sunlight, high winds (bent his 35 foot "self supporting" tubular tower
>over 4' above the ground), snow and ice, etc. Longevity is one
>attribute that I can address with authority, and the Ringo seems to be
>acceptable.

On the other grasping member, the Ringos I've had have been prone to rather rapid corrosion, and perform poorly when wet. (Actually they *always* performed poorly compared to a good antenna (skewed patterns), they just got worse when wet. I found that to be true of the Cushcraft AOP package too, but their long boomers seem to work fine, probably because of the different driven element design.)

Side note: the amateur satellites offer a wonderful real world signal source for testing steerable directional antennas. They aren't so good for testing typical terrestrial omni antennas though. That winds up to be so installation and local terrain dependent as to be almost intractable. Even careful antenna range measurements may not fully apply in your local situation because your installation may not be similar to the range at all. I've installed several different antennas at my repeater site and then did coverage tests. So far, the best amateur antenna (electrically) has been a Comet. It has also held up well mechanically in that severe environment (970 feet AGL, high winds, thunderstorms, and a once in a century ice storm didn't faze it).

>Can you direct us to plans for homebrew versions of the Comet or Diamond
>designs? I like these antennas, but would prefer one that is made in
>the U.S. (by me!)

Well the best set of plans is to buy a Comet and copy it. :-)
Number 12 solid bare house wire and some UV resistant PVC pipe
are all you need to duplicate one. There was an article in 73
Magazine on making a coaxial colinear that is functionally the
same. A local ham made one and found it to compare reasonably
well with the commercial antennas. Where home designs of this
type usually fail, however, is in the mechanical details. There
is usually at least one specially made part that is hard to duplicate
at home.

>in the world other than as a lousy ground rod :-)

>Scott - singing the praises of mediocrity :-)

Ah, well, that says it all. :-)

It's true that even a wet string will radiate after a fashion. I've
even made fairly distant contacts using a lightbulb dummy load. And
we all know how good rubber duckies are, but we still use them. Still,
there is a large difference between a Ringo and a Comet. There's often
enough difference to make the difference between needing an amplifier
and not on transmit, and enough difference in receive to make or break
a contact. Whether that's important or not to you is an individual matter.
It just seems odd to me that people, who will spend *thousands* on radio
equipment, balk at spending a few extra dollars for a good antenna system.
A better antenna is almost always more cost effective than a better radio.

715. Icom 737 Fan..can you hear it?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-14 01:46:28 UTC
From: IQC109@uriacc.uri.edu
Message-ID: <199407140149.SAA03302@ucsd.edu>
Source record: 263479

I have had an Icom 737 HF transceiver for several months and am very satisfied (except for the strange layout of the numerical keypad). I do have one question. Does the fan ever go on? I have never heard it. I usually transmit no more than 1 minute at a time (although I have gone as long as two minutes). The unit is supposed to have a 100% duty cycle. I have never heard it during phone or CW modes. I'd appreciate any comments from Icom owners...is this normal operation for this unit? Thanks...

Maybe the FCC could issue a series of call signs to VECs so that they could provide them to the person once they pass the test. The application could be sent into the FCC with this serialized call sign and entered into the computer when the application arrives, but the new ham could begin transmiting as soon as he completes the test. This would work like the upgrades. If a VEC does not use all the issued call signs he could return the list to the FCC or give them to another VEC.

:
: 73...Jim
: N2VNO

They use ultrasonic to fuse-up the battery case for
a waterproof (and lower cost of course). If you
think screws is a good idea you have to think about
who pay for that screw first.
OK! Back to your PB-6, if you want to open it up,
you need a thin blade, point it to the fusion line,
give it a hit with a hammer. For a better result,
you need some practice. DON'T hit it too heavy or
you'll break it into pieces. Use chloroform to
stick it up after you replace the NiCds if you're
luckily to find some.

721. Gray Areas of 'No Commercial Use'

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-14 04:35:43 UTC
From: chrisp@max.tiac.net
Message-ID: <199407140433.AAA06611@max.tiac.net>
Source record: 263568

Question: I'm going for my Tech license on Aug. 1st and I've been thinking of some neat uses for packet radio.

I was thinking of using a laptop + TNC + HT and a PC + TNC + another HT at home and using the laptop to connect to the home PC with packet <said home PC runs UNIX so such things are readily possible>.

One of the niftier uses for such a setup would be able to do things like work on projects from *ANYWHERE* within the range of the two HT's running alone with no help.

But then I was thinking, would, for instance, using such a connection to work on some shell scripts I was writing for my job be considered 'Commercial Use' ?

What if I told my PC to dial up my Internet access provider and checked my mail? I've paid them for a service, so is my dialing up their terminal server and logging in a commercial transaction?

Just curious.

-Chris

722. Listening to Comet/Jupiter collision

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-14 05:23:29 UTC
From: tigger@teleport.com
Message-ID: <302i4h$p7g@kelly.teleport.com>
Source record: 263557

According to an article in July's QST, "Hear the impact?," Jupiter naturally emits decametric radiation between 3 and 39.5 Mhz and the most intense emissions are at 8 Mhz. The earth's ionosphere blocks the lower frequencies - especially during daytime hours - so the range between 18 and 30 Mhz is studied more intensely by radio astronomers. The article says that anyone with good 10, 12 or 15 meter antennas should be able to hear the comet fragments collide with Jupiter (at least 21 of them). Dr F. Reyes at U of Florida says the fragments might interact with the planet's magnetosphere and create short bursts of radio energy in the last 10 to 20 seconds before impact.
Current estimates put the first impact at 1926 UTC on July 16. Fragments will continue to hit Jupiter until 0800 UTC on July 22. They don't know the exact time each fragment will collide with Jupiter, but once the first one hits - they will know impact times very accruately. There will be one hit every 3 to 12 hours.
For more information, there is the ASTRONOMY INFO NUMBER (202)357-2000 (This is the Smithsonian Institution's Astronomy Information Number).
The book suggested is The Amateur Radio Astronomer's Handbook (Crown Publishers, 1986)
INTERNET ADDRESS (for detailed info): (FTP) astro.ufl.edu under pub/jupiter

It's this Saturday - so be listening. If anyone is really interested, they should pick up the July issue of QST and look on page 62.

Look Ross, I'm not disputing the fact that the two scales coincide at -40 degrees, I was pointing out that you can't cancel the -40 on both sides: -40F = -40C does not imply that F = C for all temperatures. Now, if we have -40*X = -40*Y then that DOES imply that X = Y.

Sheesh.

SPECIAL NOTICE REGARDING JUPITER AND PERIODIC COMET SHOEMAKER-LEVY 9

JUPITER - PERIODIC COMET SHOEMAKER-LEVY 9 (1993E)
R. M. WEST, EUROPEAN SOUTHERN OBSERVATORY, HAS MEASURED THE
NUCLEI ON CCD IMAGES OBTAINED DURING JULY 1-8 BY O. HAINAUT,
R. SCHULZ, M. CAROLLO, C. ALARD AND A. CIMATTI WITH THE
3.5-M NEW TECHNOLOGY TELESCOPE AND 1.5-M DANISH TELESCOPE.
REDUCTIONS WERE WITH THE HELP OF SOUTHERN SKY ATLAS PLATES
AND PROVISIONAL HIPPARCOS REFERENCE-STAR POSITIONS PROVIDED
BY M. PERRYMAN AND C. TURON. F. NAKANO, SUMOTO, JAPAN, HAS
COMPUTED IMPROVED ORBITS AND THE FOLLOWING TIMES (CORRECTED

FOR LIGHT TIME) FOR THE IMPACTS ON JUPITER: A = 21,
JULY 16.826 UT; B = 20, 17.113; C = 19, 17.287;
D = 18, 17.483; E = 17, 17.625; F = 16, 18.014;
G = 15, 18.308; H = 14, 18.805; K = 12, 19.425;
L = 11, 19.919; N = 9, 20.428; P = 8 (= P2 = 8B), 20.624;
Q = 7 (= Q1 = 7A), 20.831; R = 6, 21.223; S = 5, 21.627;
T = 4, 21.758; U = 3, 21.907; V = 2, 22.166; W = 1, 22.330.
COMPARISON WITH COMPUTATIONS BY P. W. CHODAS AND D. K. YEOMANS,
JET PROPULSION LABORATORY, SUGGESTS THAT THE UNCERTAINTY IS
NOW AROUND +/- 0.005 DAY FOR ALMOST ALL THESE NUCLEI, THE
REMAINING UNCERTAINTY BEING MAINLY BECAUSE MOST OF THE
EARLIER OBSERVATIONS WERE REDUCED USING THE STSCI GUIDE
STAR CATALOGUE. USING THE TIDAL-DISRUPTION MODEL OF
Z. SEKANINA, CHODAS AND YEOMANS PROVIDE LESS CERTAIN IMPACT
TIMES FOR LOST AND LESS WELL OBSERVED FRAGMENTS: J = 13,
JULY 19.11 UT; M = 10, 20.24; P1 = 8A, 20.69; Q2 = 7B, 20.81.
THEY ADD THAT A SIGNIFICANT NUMBER OF PARTICLES BEYOND THE
EASTERN END OF THE NUCLEAR TRAIN SHOULD NOW ALREADY HAVE
BEGUN TO STRIKE JUPITER.

SYNOPSIS OF ACTIVITY

Solar activity was at very low levels.

Solar activity forecast: solar activity is expected to be
at very low to low levels.

The geomagnetic field has been at quiet levels for the
past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at quiet to unsettled levels.

Event probabilities 14 jul-16 jul

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 14 jul-16 jul

A. Middle Latitudes
Active 20/30/30

Minor Storm 10/15/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 20/30/30
Minor Storm 10/15/15
Major-Severe Storm 05/05/05

HF propagation conditions were normal over all regions.
Near-normal propagation is expected to continue over the next
24 hours. High-latitude minor signal degradation may begin to
be observed on 15 July in response to a recurrent disturbance.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

This is so true Jack. I heard one individual say that for years. He wanted
to get onto HF so badly. The code held him back though. He and I were both
in the Air Force and reassignments sent us to different corners of the globe.
It had been several years since I'd seen him when I was sent temporary duty to
a frequency management seminar in Omaha, Nebraska. Guess who I ran into? And
it was the first time I ever used my new callsign, the one I have now-WK1V.

Anyway, Mike (WA7SKG) had his General ticket. And he told me he couldn't
learn code, at least to the point of getting his speed up to 13 wpm. So, I
know that ANYONE can if they want to. There is a "loud" minority who are
asking, "Why should I have to?" And I respond, "If you want HF you need to."
So, apparently they don't want it badly enough. They'd rather spend their
time and energy bellyaching about it than learning it. Oh well, leaves the HF
bands less crowded for us folks who learned it. At least for now.

I am a new ham (expecting my ticket in 2 weeks - I passed the Tech on 4/12!) looking for a 2-meter HT which doesn't feel like a toy. Guess I've been spoiled with using Motorola HTs for so many years... I saw a brochure for the Azden units, which meet MILSTD 810 for ruggedness and appear to be roughly equivalent to an HT600 or MT1000 in size.

Anyone have any experience with Azden gear which they could share?

Many thanks.

BIG BOATANCHOR BASH!!!
CENTRAL GEORGIA NATIONAL HAMFEST
PERRY, GEORGIA
August 6, 1994
0800-1500

Now is the time to begin planning to attend the Central Georgia National Hamfest at Perry, GA, on August 6, 1994. The hamfest will be held at the Georgia National Fairgrounds, right off I-75, exit 42.

Activities include:

** The Boatanchor Forum, conducted by Jim Kearman, KR1S. As far as I know this is the first hamfest forum devoted to boatanchors. It took a little talking to get the hamfest committee to put up the money for Jim's trip. Come on down and help me convince them that they made a good investment.

** A Repeater Forum. (Repeaters are very useful to discuss boatanchors.)

** How to become a Ham Forum. (Boatanchors are much more fun, if you are a ham!)

VEC testing will be conducted. Walkins accepted. (Upgrade now so that you can put a boatanchor on every band!)

Dealer spaces are available inside. If you insist on having suche amenities as a table, chair, and air conditioning then this is the place for you.

A large Bone Yard space, right outside the main building, is available for FREE! That's where you will find me along with a pickup truck full of stuff. (Don't have to carry those heavy radios quite so far!) Bring all of your excess boatanchors and let's see how many can find new homes!

Refreshments available at the hamfest. (What's a hamfest without hot dogs?)

Lodging is available in the immediate vicinity of the hamfest.

Talk in: 146.25/85

If you would like more information, please contact

Larry Keith, KQ4BY
231 Shenandoah Trail
Warner Robins, GA 31088-6289
912-329-0030 (no calls after 10PM, EST, please!)

lakeith@wrdis01.robins.af.mil

Hope to see you there!

73,

Larry, KQ4BY

733. Re: Lack of professional consideration for HAM operators

>Well while I know the frustrations of waiting for the ticket, I have to
>say that the FCC has larger fish to fry than Ham radio. Also, the amateur
>service has no RESPONSIBILITY for emergency radio service. Hams provide
>such services but there is no legal expectation or requirement for it.
>

Suggest you read Part 97 (you DO have a copy, right?) -- right in the first section you'll find the following:

"97.1 The rules and regulations in this Part are designed to provide an amateur radio service having a fundamental purpose expressed in the following principles:

(a) Recognition and enhancement of the value of the amateur service to the public as a voluntary noncommercial communication service, particularly with respect to providing emergency communications."

There are four other purposes listed, but emergency communications is the first. So there certainly IS a responsibility and legal expectation for hams providing emergency communications.

>warfare as the only way to fight the RF terrorist will become lowering
>yourself to their level. Someone in this very newsgroup posted how they
>planted a white-noise generator near a repeater to wreck havoc and get it
>off the air.

Which completely ignores the list the FCC publishes every month of
NAL's that were issued, including quite a few to hams.

>
>We've got a testing system that is a joke. People selling ham licenses,
>those willing to "study" simply have to memorize the published question
>pool. I wonder how my students would do on their exams if I gave them
>the questions and answers before the examination.

Which is the same test system used for pilot licenses, drivers
licenses, and most other licenses that exist today. If someone can
memorize the answers to 600 questions, they probably deserve a license
-- not to mention that if they memorize the answers, they've learned
the information anyway, becase most learning consists of memorization
anyway. Or did you figure out the multiplication tables on your own?

>You're deluding yourself if you think you're going to be the instrument of
>change. Amateur radio today is CB radio of the 1970's. Get used to it,
>its here to stay.
>

Well, it's obvious we're not going to agree. Enjoy yourself bitching
about how bad things are -- I'm too busy helping to teach
amateur radio classes, running ARES events, and working at VE sessions
to have time to do it. We'll let time see who has the greater effect
on the service.

Where are you located? Early indications from scores on posted on the
local packet cluster seemed to indicate that the propagation to some
areas was much better than others. Around here, it looked like
Pennsylvania to the North was hopping, while the D.C. Metro area was a
black hole as far as most signals were concerned...

>(which I understand they did), then they bungled. No one is doing me a service
>by saving me 10 bucks and making me wait 17 weeks.
>

The opposition to license fees is based on the fact that under the
current system, any fees paid go into the general fund, and NOT to the
agency actually issuing the license. The only way I'd pay a fee is if
I was absolutely sure it went to the FCC, and not to the Department of
Investigating Nose-picking.

Yes it would because it's directly related to your job.

>What if I told my PC to dial up my Internet access provider and checked my
>mail? I've paid them for a service, so is my dialing up their terminal server
>and logging in a commercial transaction?

No, that would be OK under the new rules, unless answering Email is part
of your regular job. The fact that you pay for the internet connection is
irrelevant. It's no different than the radio club paying for the phone line
for the autopatch on the repeater. The test is if it's directly related to
an income producing activity for you or your employer. If it incidentally
makes money for someone else, that's not a problem.

Has anyone here been monitoring Jupiter on the HF bands recently?
I listened years ago but have forgotten what the normal signals
sound like. As I recall they were rather distinctive buzzsaw like
sounds. How about some frequencies and discriptions of the signal
in recent days. I likely won't have my HF antenna back up before
Saturday morning (a tree fell on it, and I won't have it back up
unless it quits raining long enough to restring it). I don't hear
anything that sounds like what I remember listening on a 18 inch
clip lead.

Erich, have you TRIED the take the exam yet? Why not give it a shot? You don't
NEED to copy 100%. And if you take it with ARRL VE's, it's multiple choice.
100% copy comes with lots of time and practice. Doesn't happen in real QSO's
either. You have to "fill in the blanks" based on context. Go for it anyway!
You may be pleasantly surprised. Worst that can happen is that you're out $5.60.

The next step is to learn the code. If you have access to a personal computer, you might find working with a morse code program such as Super Morse to be an entertaining diversion for a few minutes a day.

I think a one week cycle is a little optimistic. However, I think that Amateur Radio Operators should defray the cost of processing license applications. If we did, then we would have a reason to complain if the processing time is excessive.

If I understand the situation correctly, Congress would have to pass a law that would allow the FCC to assess fees for processing amateur radio applications and allow the FCC to use the revenue to pay the salaries of additional employees. I am not sure that it is quite that simple. If the present computer system does not allow multiple access to the data, then throwing people at the problem will not help, as an example.

If you really want to help, I suggest a letter to your representatives and to the FCC that makes the follwing points:

1. The current processing delay in the issue of new/modified amateur radio licenses is detrimental to amateur radio. These delays inhibit some potential candidates from testing for an amateur radio license and suggest that the federal government does not support amateur radio.

2. If processing delays can be reduced by hiring additional personnel, then the best solution is impose a processing fee for each license application and use the revenue to pay additional FCC employees.

3. As a licensed Amateur Radio Operator, I support the collection of fees from applicants to provide the revenue required to operate the Amateur Radio Licensing activity of the Federal Communications Commission as long as the fee is charged for each and every application. I would not support a plan where some applications are processed for free while other applicants are charged for the same service.

OK, who is going to get the ball rolling?

>operators. Not only that, think of how many people you can reach using

i think the CB bands around here have been picked clean as far as finding people interested in getting into amateur radio or those needing things like GMRS or cell radiophones.

Even an article a short time ago in the Orlando Sentinel (was front page on their "Style" section about "What Ever Happened to CB Radio" with lots of pictures of aging people who got into CB before the Fuel Shortages and now find limited activity on the band - i should hope because we have an amateur radio license structure that is attractive to those interested in radio as an avocation and useful service..)

i tend to have trouble with guys that want to have all amateur radio jargon run through the CB Slanguage Language book. and I find it easier to work the crowds for those with a desire to know more about radio yet not have been a gung-ho CB op first (lots of them out there).

had two kids in the summer class and 3 adults (actually a pretty good turnout for summer..) and they might have their licenses by the end of september if Xerox can get the FCC's printers back on line (one of the guys called yesterday before class and it looks like the big laser's been cranky putting a further bind on the backlogged system -- something like 20,000 applications now in the "to be done" pile & the FCC is trying to make sure they get the new apps processed first over the renewals and upgrades. but it was slow going yesterday..).

>indicated with their comments in the past that they like the system the
>way it is." Maybe amateurs would be happy with new proposals. But, the
>FCC simply throws them away because they could be bothered with the
>hassle.

VE Testing took an act of Congress to get started. Had that not been done,
there would have been NO testing. Did you have your license before 1982, Mike?

Most "petitions" the FCC gets are of a "moot" nature. And they do look at
history. Then again a Well Written petition can get the ball rolling (say,
like for the current Technician license) when the time is right. But most
petition authors won't do the homework and learn the history and their
petitions won't dovetail in to the rules properly.

no doubt they still get ones asking for a codeless ham license even today.

Remember the #1 misspelled word on amateur radio petitions to the FCC is the
word "amateur".

>problems. A troublemaker has to interfere with other services before the
>FCC even takes notice. The net result will be more lawsuits and guerilla

everyone always claimed we were self-policing, and now the FCC believes. They
don't care if we soil our own beds...

Excuse me, how are you paying for your license? Last I checked, your licenses were free and that was the way you (US citizens) prefered it ...

I spend $46CAN/year for two licenses here in Canada (VE6MarkGregorySalyzyn and VE6MutherF**kingB*tch) and get same day service and can call any Industry Canada office to inquire about how they are processing my next complaint against the fool that wishes to drop into the Amateur Bands illegally (not saying they do anything about it, though ;-/). Just yesterday, I sent $40CAN(15L) for one British License, apparently will be ready when I arrive in a week to operate. The price to have *real* licensing I guess ...

When you *whine* that you don't get that kind of service, and then *whine* about paying *anything* for your licensing, I end up *whining* about your insolence, eh?

: [good stuff snipped in interests of bandwidth]
: From someone who's used CB for lo, these many years (I really had a license a
: one time--one of the few I knew who ever got one--KFZ9762--could that

: Thanks for a refreshing, reasoned approach that will take only an
: investment of time to implement.

But remember that some of the people who use CB's really aren't wanted on ham frequencies, and an allure of CB is the lack of need for licensing. Case in point: there were some teens riding around in a black? jeep with a CB cussing out the window about somebody who was using "their" frequency and trying to find who it was. The passengers of the jeep were cussing at every-body they passed. I don't want that type of person on the ham bands!!!

I think that getting on CB bands to give a little info about ham radio is fine, but trying to bait CB users onto ham bands can have some potentaially icky consequences. Enter the FCC. With the current 17? week waiting period for a licnese who would want to get a ham license??? ;)

Yes, some people on CB bands are perfect for ham radio, but at the same time, some of the things people cherish on CB is what we hate!!!

--jesse, KC5???/AE :)
(the FCC issued on June 22, didn't tell me what it is, and I'm still waiting)

762. Need schematic for 1750 Hz tone generator

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-14 17:17:19 UTC
From: tlanders@atlas.com
Message-ID: <1994Jul14.171719.15161@atlas.com>
Source record: 263381

Hi everyone. I am living in Europe and using an American model 2-meter handheld. Over here, one needs a 1750 Hz tone burst to open the repeaters. I have not been able to find a commercially-available tone generator in the Cologne, Germany area, and I am tierd of trying to whistel the repeaters open, so I guess I have to build one instead. Does anyone know where I can find a simple and potentially compact design/schematic for a 1750 Hz tone generator? Does anyone know where to buy one? How about a tuneable whistle? ;-) ;-)

Thanks for any help.

OK, I've been out of touch for a while.* Be gentle. What is this tech+ license I keep hearing about? A new class, or simply code credit to work the HF novice bands? If the former, how do privileges differ from a plain tech?

If your technician license is still valid, it is equivalent to what is now called a technician plus. You have full priveleges above 30 MHz and novice priveleges below. Further, if you took your test before the magic date in March 1987 when they split the general question pool into a technician part and a general part, you also have automatic permanent credit for the written part of the general exam, so you would only need to pass a 13wpm code test for a general.

Question: I'm going for my Tech license on Aug. 1st

Good luck.

One of the niftier uses for such a setup would be able to do things like work on projects from *ANYWHERE* within the range of the two HT's running alone with no help.

But then I was thinking, would, for instance, using such a connection to work on some shell scripts I was writing for my job be considered 'Commercial Use' ?

Communications in the Amateur Radio Service which financially benefit you or your employer are prohibited(*). This doesn't sound gray at all to me.

What if I told my PC to dial up my Internet access provider and checked my mail? I've paid them for a service, so is my dialing up their terminal server and logging in a commercial transaction?

Just think how much you would like anyone with a radio and TNC watching it log into your service with your login and password.

Source record: 263503

TDD's use the baudot code, 45 wpm in the domestic US, if I remember correctly. The speed is slightly different outside of the US.

Anyway, I got some info some time back regarding the tones for the mark and space and they are slightly different than the standard amateur ones (again, if I remember correctly).

You cannot use a normal modem with a pc to talk to a baudot tdd unless it is a special modem with appropriate software. IBM has some and I have seen some others. It is a nitch market, so they are not common and they are also not cheap. You could write your own if you decoded the marks and spaces externally and fed the info in the serial or parallel ports.

Newer tdds have 110 and 300 baud ascii built in, and those can talk to a pc with a modem. If your current tdd does not have ascii, you are out of luck.

Let me know if you want the info on the mark and spaces for tdds. I can dig it up at home.

Why not just call them on the telephone instead? Saves a lot of money on
radio gear.

Seriously, is an FM 2 meter contact of that distance unusual? I thought
SSB was pretty much mandatory. Just had a QSO with a guy on 222Mhz today
who claimed to have made the first 2 meter contact from the NorthWest US
to Hawaii. How many times has that been done?

Better yet, you're not too far away from Electronic Times (if they're still in business...it's been a year since I last visited the store). I'm tempted to say it's off of Magnolia but my brain has lost all SoCal street information when I moved ;-). It's not too far away from Tommy's-- that much I remember. ET carries (or should carry) the ARRL Repeater Guide and maybe the repeater directory that Karl Pagel N6BVU publishes.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z JULY 1994 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 JULY AND FORECAST FOR 15 JULY - 17 JULY

IPS Disturbance Warning 18 was issued on 11 July and is current for
interval 15-16 July

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 082/023

GOES satellite data for 13 Jul
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: NA
Daily Electron Fluence >2 MeV: NA
X-ray background: A6.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Jul 16 Jul 17 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Jul: 080/020

1C. SOLAR COMMENT
None.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to active, with minor storm
period 15-18UT.

Estimated Indices : A K Observed A Index 13 Jul
Learmonth 21 2334 4533
Fredericksburg 15 04
Planetary 21 04

Observed Kp for 13 Jul: 2010 1122
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
15 Jul 25 Unsettled to active
16 Jul 25 Unsettled to active

17 Jul 15 Unsettled

2C. MAGNETIC COMMENT
Recurrent coronal hole induced activity expected 15-16 July.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
14 Jul normal normal normal
PCA Event : None.
3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
15 Jul normal normal fair
16 Jul normal normal fair
17 Jul normal normal fair
3C. GLOBAL HF PROPAGATION COMMENT
None.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs
14 Jul 38 near predicted monthly values, with 15-30% enhanced
11-16UT.

Predicted Monthly T-index for July: 30

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
15 Jul 35 Near predicted monthly values
16 Jul 30 Near predicted monthly values
17 Jul 30 Near predicted monthly values

4C. AUSTRALIAN REGION COMMENT
Slightly degraded HF propagation conditions likely 15-16 July
due to coronal hole activity.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: In article <2vv0vl$198@hplvec.lvld.hp.com> scott@lvld.hp.com (Scott Turner) writes:
: >I just love the net. Everything tends to take on a binary nature, as
: >though the 0's and 1's from the computer were permeating the thoughts
: >and ideas of those using it. Everything is either great or it's junk
: >with nothing in between.

: >Scott - singing the praises of mediocrity :-)

: Ah, well, that says it all. :-)

: It's true that even a wet string will radiate after a fashion. I've
: even made fairly distant contacts using a lightbulb dummy load. And
: we all know how good rubber duckies are, but we still use them.

Doggone it Gary, that's exactly what I was referring to! We agree that Diamond and Comet make superior antennas, but I can't agree with comparisons to wet strings, lightbulbs and grounding rods. That's just not fair to readers looking for information. Ringos work. Other, more expensive antennas work better. Wet strings are wet strings.

: It just seems odd to me that people, who will spend *thousands* on radio
: equipment, balk at spending a few extra dollars for a good antenna system.
: A better antenna is almost always more cost effective than a better radio.

Again agreed. It's really a case, though, of when enough is enough. A while back, I was talking to a friend who was up in the mountains with a portable 2 meter beam doing a little mountaintopping and looking for fm contacts. He was continuously frustrated because, as we talked, folks kept jumping into the QSO calling *me* because of my big signal. Several folks that day almost refused to believe my location as they'd never worked FM simplex that far before. It works because the combination of antenna mast and house location yield a good HAAT. A better omni antenna is simply not going to improve things much. Nor is it going to help the hapless individual stuck in a hole.

BTW, like many (maybe even most) hams, when I originally put the Ringo up it was hooked to a very marginal radio and money most certainly *was* an issue. Even now the radio that drives it is hardly worth thousands. Neither, I would guess, are most ham's VHF rigs, particularly those hooked to omni antennas. If you're talking about a quality all-mode VHF/UHF rig then certainly it's poor economy to scrimp on antennas. I don't think that's what the original poster was doing. I don't think that's what most people are doing. A Ringo is a decent, cost-effective way to hook up a VHF mobile or HT in a house to work repeaters and a bit of simplex.

There's really no point in paying Ferrari prices to drive 2 miles through city traffic to commute to work. I like having the best too. When there's a point to it.

>licenses (this is, sadly, true). The FCC may actually consider volunteers

Hmmm. Six terminals for each worker...sounds about right! :-)

I do not understand why those folks aren't smart enough to put a tape on
an answering machine telling callers what the situation is.
Oh, well.

>Tom WB7ASR...

Hmm. My longest 2 meter FM contact was when I worked Columbus, Ohio
from Bristol, VA through a Smokey Mt. Repeater. This was something like
300 miles. I'm still impressed that I can't do that out West here where
we have bigger mountains but probably too many mountains. I was using
my brand new FT-07 Yaesu handheld, first one out with microprocessor.
I can reliably get the guy in Hawaii who is on RS-10. Why is it that all
the DX hams are on the Big Island? I used to work a guy on 10 meter AM
all the time who was on the Big one.
Sure, I used to talk to Hawaii all the time on HF when the sunspot cycles
were hot, but it got to be too common so now I listen for weak ones on
VHF and UHF. No Hawaii yet and no skip anymore much either.

Georgia Flood Update

The emergency in Georgia caused by floods is subsiding. In response
to this situation, the FCC declared emergency will expire Friday,
July 15. The Georgia Emergency Management Agency has given the
Amateur Radio Emergency Service permission to secure their
operations, while Red Cross officials in the affected areas will
maintain the service of ARES members until Friday morning, July 15.

SB DX ARL ARLD040
ARLD040 DX news

The items in this week's bulletin are courtesy of Chod, VP2ML, The DX Bulletin, the OPDX Bulletin and the Yankee Clipper Contest Club PacketCluster network. Thanks.

CONGO. Rudi, DK7PE, is on the air as TN0CW and should remain so until July 21. He has been worked from New England on 1827 kHz at 0210, 0345 and 0500z. Also on 3505 kHz at 0230 and 0330z.

MALAWI. Peter, ON6TT, may be active soon as 7Q7XT, perhaps from July 17 to August 5. QSL via ON5NT.

BARBADOS. Mark, formerly J5UAI, is now 8P9HB. He operates CW, SSB and RTTY. QSL via NW8F.

TONGA. Masa, JE1DXC, should be on from Tongatapu Island, IOTA OC049, until July 27. As of press time, no local PacketCluster spots have appeared for this one. QSL via CBA or the JARL Bureau.

SABLE ISLAND. Wayne, VE1CBK, says there is a chance he will be signing CY0SAB from July 18 to 22. QSL to VE1CBK, Wayne King, 63 Brook Street, Lake Fletcher, NS, Canada B2T 1A5.

KERGUELEN ISLAND. Pierre, FT5XJ, operates RTTY around 14085 kHz between 1215 and 1245z. QSL via F5NLL or F1NLL in the callbook.

NORTHERN MARIANA ISLAND. Tosy, JA6VZB, plans to be active as AH0T from July 14 to 17. Listen for him on all bands with CW and SSB. There is a possibility of some RTTY. QSL via JA6BSM.

SAO TOME. Charlie, S92SS, has been heard on the WARC bands. Check 18087 or 10109 kHz around 2245z. If not there, check 20 meter SSB between 2100 and 2300z. S92YL has also been active on 15 and 20 meters between 2030 and 2130z.

SUDAN. Lou, ST0K, has been on 20 meter CW around 14019 kHz between 2230 and 0030z.

TOKELAU. Steve, AA6LF, should be on from ZK3 land until around July 18. Most of his recent ZK1 activity was on 20 meters between 0300 and 0700z. QSL via AA6LF.

SAINT PIERRE AND MIQUELON. Dave, KA1NCN, will be signing FP/KA1NCN July 19 to 25 with CW, SSB and RTTY. QSL via AA1AS, ex KD1FE.

people interested in getting into amateur radio or those needing things
like
GMRS or cell radiophones.

^^

This may be true in some parts of the country but I've heard otherwise
about other parts. There is a lot of mis-information in radio land
regarding ham radio and I think its a matter of setting the record
straight. A lot of operators would enjoy becoming hams if they knew more
about it.

My comments in my mini-article may not apply in all circumstances but I
think, judging by the replies I've received that an overwhelming amount of
hams consider CB to still have some potential.

I am taking my own advice by getting my CB up and running and searching
for "fresh game".

>The HTX-202, for the most part, is a nice, simple, design.

: Rumor has it that Maxon builds them. Really!
^^

Maxon DOES build them and very well at that. The reason these little
radios have good receivers is because of their limited bandwidth. There is
always a compromise when they add extra coverage.

788. Questions...

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 02:52:13 UTC
From: erobbins@leotech.mv.com
Message-ID: <znr774240733k@leotech.mv.com>
Source record: 263428

I can't believe I just discovered amateur radio. I've always known about it however, last week I finally looked into it. It is everything I have been looking for and then some, but with every new hobby there are newbie questions so here goes......

1. I live in Sandown, NH and I'm looking to take the technicians test. Can anyone tell me were and when I can take the exam in my area?

2. I actually bought an HT today and have been listening in quite eagerly. This has only fueled my desire to get on the airwaves. Will an HT be capable of using from my house? I have no problem receiving signals, some of which are very far away.(I know this is through a repeater).

3. Where can I get a list of repeater frequencies?

4. Does the FCC allow you to operate on the air once you pass the test? The FAA issued me a temporary certificate when I passed my flight exam, is there a similar policy for radio use?

I would appreciate any help I can get. If this is not the proper place to ask these questions then I apologize for the wasted bandwith, and would appreciate some direction as to where to ask. Thanks in advance.

Ed Robbins "When all else fails, read the instructions!"

Yes, it would -- Part 97 still forbids traffic that financially
benefits you or your employer, and this certainly qualifies.

>
>What if I told my PC to dial up my Internet access provider and checked my
>mail? I've paid them for a service, so is my dialing up their terminal server

May not be commercial under the current rules, but could be a violation
of the third-party traffic rules.

>owners...is this normal operation for this unit? Thanks...

Yes it is; I've only heard the fan on my 737 go on when I'm running a digital mode (RTTY/Amtor/Pactor). Those modes, especially Amtor and Pactor, key the transmitter a lot more, and the fan will kick in about 10-15 minutes into a QSO.

No; all license fees paid to US Government agencies go into the general fund, and become part of the overall budget. Fees do not go directly to the service that collects them.

<ASUSEE@MAINE.MAINE.EDU> writes:

>Magellan reports readings that are several hundred meters
>off in elevation as well as location. The elevation wanders
>as thou it can't decide. Is this normal for GPS equip?

a) be sure you have the receiver producing positions that are consistent
with the maps you are referencing. not many maps are printed on WGS
datums, for example ... your receiver should have a setup mode where
you tell it to produce positions in (say) North American Datum
1927 (NAD27). check your maps and your GPS manual.

b) vertical accuracy of any C/A GPS receiver is pretty abysmal. typically
+-250 metres is my experience. very irritating at or near sea level,
not a big deal in the mountains.

c) horizontal is better, but depends strongly on the geometry and such.
your receiver should be able to tell you how "good" the solution is.

d) the position in the .sig was the average of some 43,000 positions,
collected over a whole day of observation, from a Magellan GPS receiver.
the horizontal rms error of the run was exactly 100.0m ... which happens
to be the Official SA Degradation. coincidence? probably.

SPECIAL NOTICE REGARDING JUPITER AND PERIODIC COMET SHOEMAKER-LEVY 9

JUPITER - PERIODIC COMET SHOEMAKER-LEVY 9 (1993E)
R. M. WEST, EUROPEAN SOUTHERN OBSERVATORY, HAS MEASURED THE
NUCLEI ON CCD IMAGES OBTAINED DURING JULY 1-8 BY O. HAINAUT,
R. SCHULZ, M. CAROLLO, C. ALARD AND A. CIMATTI WITH THE
3.5-M NEW TECHNOLOGY TELESCOPE AND 1.5-M DANISH TELESCOPE.
REDUCTIONS WERE WITH THE HELP OF SOUTHERN SKY ATLAS PLATES
AND PROVISIONAL HIPPARCOS REFERENCE-STAR POSITIONS PROVIDED
BY M. PERRYMAN AND C. TURON. F. NAKANO, SUMOTO, JAPAN, HAS
COMPUTED IMPROVED ORBITS AND THE FOLLOWING TIMES (CORRECTED

FOR LIGHT TIME) FOR THE IMPACTS ON JUPITER: A = 21,
JULY 16.826 UT; B = 20, 17.113; C = 19, 17.287;
D = 18, 17.483; E = 17, 17.625; F = 16, 18.014;
G = 15, 18.308; H = 14, 18.805; K = 12, 19.425;
L = 11, 19.919; N = 9, 20.428; P = 8 (= P2 = 8B), 20.624;
Q = 7 (= Q1 = 7A), 20.831; R = 6, 21.223; S = 5, 21.627;
T = 4, 21.758; U = 3, 21.907; V = 2, 22.166; W = 1, 22.330.
COMPARISON WITH COMPUTATIONS BY P. W. CHODAS AND D. K. YEOMANS,
JET PROPULSION LABORATORY, SUGGESTS THAT THE UNCERTAINTY IS
NOW AROUND +/- 0.005 DAY FOR ALMOST ALL THESE NUCLEI, THE

MARSDEN@CFA OR GREEN@CFA (.SPAN, .BITNET OR .HARVARD.EDU)

SYNOPSIS OF ACTIVITY

Solar activity was at low levels.

Solar activity forecast: solar activity is expected to be
at generally very low levels, with an occasional C flare.

The geomagnetic field has been at quiet to active levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be unsettled, with periods of active levels at
low to mid latitudes. Mostly active levels with periods
of minor storms are expected at high latitudes.

Event probabilities 15 jul-17 jul

Class M 05/05/05
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 15 jul-17 jul

A. Middle Latitudes
Active 60/60/30
Minor Storm 20/20/15
Major-Severe Storm 05/05/05

B. High Latitudes
Active 65/60/30
Minor Storm 25/25/15
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all regions. High latitude sites began to report increased signal instability as the day progressed, coinciding with periods of enhanced geomagnetic activity and high-latitude substorming. Similar near-normal conditions are expected for the low and middle latitudes. High latitudes should see below-normal conditions with periods of poor propagation, particularly on transauroral night-sector circuits.

1138 1144 1150 B3.2 SF 7746 N10W66 V
1555 1603 1608 B2.3 III,V
1647 1722 1732 B4.4 SF 7746 N12W69 V

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep

Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

795. RACC Picnic/Fox Hunt -- 17 July

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 07:52:51 UTC
From: tim@umcc.umcc.umich.edu
Message-ID: <305f8j$28o@umcc.umcc.umich.edu>
Source record: 263438

The Radio Active Communications Club of Southeastern Michigan (RACC)
will be holding an annual picnic/fox hunt demo this Sunday, 17 July at a
public park in S.E. Michigan.

This event is open to ALL who would like to learn about fox-hunting,
the RACC, or even just ham radio in general.

There will be a limited amount (depending on turnout) of
refreshments and possibly food available for attendees, although we
encourage you to bring your own food to be BBQ'ed & *non-alcoholic*
beverages.

The location for the RACC Picnic/Fox-Hunt will be Crowley Park in
Dearborn, Michigan. Crowley Park is near Telegraph Road & Michigan Avenue.
The picnic starts at Noon.

Talk-in/info updates will be via the N8IQX repeater on 224.580, or
via its simplex link on 147.495MHz. For those of you interested in
participating in the fox hunt(s), bring your 2-meter band RDF gear. The
'fox' will probably be within walking distance of the picnic spot.

The Radio Active Communications Club of Southeastern Michigan is an
ARRL Special Service Club comprised of individuals who --in addition to
conversing via amateur radio-- like to get together for non-radio related
activies also. Our weekly net is on Monday nights at 8PM on the 224.580
repeater with the 147.495 simplex link.

By the way, we sent an informal 'press release' concerning our
picnic to the ARRL for possible mention in QST (again, this event is open to
the public and other hams). It is indeed listed in the July, 1994 issue of
QST, but in the "Hamfest Calendar" column (on page 114). Unfortunately,
this would tend to indicate to QST readers that our 17 July event is a
'hamfest,' as in a ham swap/flea market. THIS IS NOT THE CASE!

Tim Tyler, KA8VIR
RACC Public Affairs/BS Artist

well, my long awaited renewal arrived today. I'm legal until 7-7-04. however
since I'm one of those techs that took 5wpm *and* the complete general theory
to get my ticket, I would have expected something a little different on
my ticket like a tech+ perhaps. should I try again with a new 610 and
a nice letter?

Is anyone familiar with the Toshiba TA7758p chip?

It's inside an inexpensive sw radio I have (a Pulser).

Is it a 'receiver on a chip'? .. an IF module?

798. Re: NTS traffic

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 10:31:04 UTC
From: smiller@intelsun.rus.uni-stuttgart.de
Message-ID: <305oh8$1ur3@info2.rus.uni-stuttgart.de>
Source record: 263441
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc

: > The NTS is an obsolete system for transferring small bits of information
: > in an inefficient way. It is primarily of interest to old-time hams.
...

Let me add a few of thoughts to this thread...

1. NTS has embraced packet radio (though some old-timers were opposed to this idea at first). Why do so many packet users shun NTS?

2. NTS is extremely valuable to amateur radio. I'd recommend that ANYONE handling third-party traffic at least spend some time learning NTS. NTS teaches discipline, accuracy, and speed. Sure, messages get lost sometimes, but that's only because this is a hobby, and some people don't let it take too high of a priority in their personal/family life. Errors in messages, lost messages, etc. cannot be attributed only to NTS. Why can't some of the NTS methods and techniques be additionally adapted for situations when only Packet radio will be relaying the message (i.e., to handle messages > 25 words)? Perhaps a new "HX_" preamble code that means "This message not suitable for being relayed by voice or CW -- keep it in the digital TTY network; cancel and notify originator if not possible." ??? And of course we hams could put our heads together and find a solution to the problem of people forgetting to delete messages they pick up on Packet and deliver.

3. You hams in the U.S. should appreciate what you've got: in Europe and most other parts of the world, third-party traffic is illegal. THERE IS NO NTS HERE! Take it from an American who loved traffic handling in the U.S.: a BIG chunk of the fun is taken out of amateur radio when you can't pass messages for/to others (non-hams). And be aware that the European governments have attempted to persuade the U.S. government to outlaw third-party traffic in the U.S. as well. Check out the ARRL FCC Rulebook for some history on this.

4. I used HF AMTOR/PacTor, and the VHF/UHF Packet network, to communicate with my dad (N7APE) and brother (AJ7X) on a daily basis for nearly 15 years. Though we are still interested in amateur radio, we now use Internet Email to communicate, especially when HF propagation is not so good between Europe and the West Coast, but also due to the third-party traffic restrictions we now have imposed on us as a result of my relocation to Germany.

I'd be happy if, at some future date, NTS was replaced by an ITS (*International* Traffic System) that embraced all modes (and users of all modes embraced ITS). I suppose I'm dreaming though...

The following is a list of informational files for this newsgroup
available via anonymous FTP from ftp.cs.buffalo.edu or the Australia/
Asian-Pacific mirror at grivel.une.edu.au.

Questions to bowen@cs.buffalo.edu

1750m.band - misc info on the 1750m band
222xvtr.zip - PostScript code for KH6CP no-tune 222-MHz transverter
8085sys.zip - 8085 system software, from QEX 11/93 and 12/93
alinco_180t_mod - Alinco 180T modification for a TNC connection
ampr_coordinators - coordinators for packet IP addresses
antenna_refs - references for articles about antenna designs
antique_radio_info - misc info about antique radio collecting
arrl-logo.ps - ARRL logo in PostScript format
arrl_bib - bibliographies from ARRL literature (ASCII format)
arrl_digital_minutes - Minutes of the ARRL committee on digital comm.
arrl_fo_jobs - descriptions of some ARRL Field Organization jobs
arrl_info_service - announcement of the ARRLs trial information service
bbs_interface_specs - specifications for message passing protocol
cal_pd_freq - California police frequencies
callbook.tar.Z - sources for the Buffalo callsign server v1.3
canadian.Z - Canadian ham database in FCC format
carpet.loop.2 - Antenna for apartments and small spaces
clubcalls.Z - database of US ham clubs
comb6.zip - HF Propagation Predication program
docket_91-36 - information regarding the proposed scanner regs
dxcc-k2di - ARRL DXCC country list
dx_w2iol.dat - data for all country prefix, position, etc
dx_w2iol.doc - documentation for the above database
element_credit - rules about VE credit for earliers exams
elmers_admin - information about the elmers list (see below)
elmers_index - quick reference index of elmers
elmers_list - list of elmers on the network
exam_ops - info on exams and exam opportunities
faq_callsign - frequently asked questions about the callsign server
faq_ham_1 - frequently asked questions about ham radio (pts 1)
faq_ham_2 - frequently asked questions about ham radio (pts 2)
faq_ham_3 - frequently asked questions about ham radio (pts 3)
faq_packet - frequently asked questions about packet radio
faq_satellite - frequently asked questions about satellites
faq_shortwave - frequently asked questions about shortwave

Changes: new mailing lists, .packet rmgroup, and .policy updates

(Note: The following is reprinted with the permission of the author.)

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info,
and rec.radio.swap newsgroups. It is intended to serve as a guide for the new
reader on what to find where. Questions and comments may be directed to the
author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@oac.hsc.uth.tmc.edu. This message was last changed on 18 September
1993 to add the mailing lists for the new rec.radio.amateur newsgroups, to
note the rmgroup of rec.radio.amateur.packet, and to officially retire some
(in)famous threads of discussion on rec.radio.amateur.policy.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

As the net grew, and as packet radio came into vogue, packet discussion began
to dominate other topics in the group and on the list. This resulted in the
logical solution: a group was created to hold the packet discussion, and
another corresponding mailing list was created as well: net.ham-radio.packet
and PACKET-RADIO, respectively.

These two groups served for several years, and went through Usenet's Great
Renaming essentially unchanged, moving from net.ham-radio[.packet] to
rec.ham-radio[.packet]. Readership and volume grew with the rest of the
network.

The INFO-HAMS mailing list was originally run from a US Army computer at
White Sands Missile Range, SIMTEL20. There were few problems with this
arrangement, but one was that the system was not supposed to be used for
commercial purposes. Since one of hams' favorite pastimes is swapping
gear, it was natural for hams to post messages about equipment for sale
to INFO-HAMS/rec.ham-radio. This ran afoul of SIMTEL20's no-commercial-use
restriction, and after some argument, a group was created specifically
```

for messages like that: rec.ham-radio.swap. This group wasn't gatewayed to a mailing list, thus avoiding problems.

While all this was happening, other folks wanted to discuss other aspects of the world of radio than the personal communications services. Those folks created the rec.radio.shortwave and rec.radio.noncomm newsgroups, and established the precedent of the rec.radio.* hierarchy, which in turn reflected Usenet's overall trend toward a hierarchical name structure.

The debate between proponents of a no-code ham radio license and its opponents grew fierce and voluminous in late 1989 and 1990. Eventually, both sides grew weary of the debate, and those who had not been involved even more so. A proposal for a newsgroup dedicated to licensing issues failed. A later proposal was made for a group that would cover the many recurring legal issues discussions. During discussion of the latter proposal, it became clear that it would be desirable to fit the ham radio groups under the rec.radio.* hierarchy. A full-blown reorganization was passed by Usenet voters in January 1991, leading to the overall structure we now use.

After the reorganization, more and more regular information postings began to appear, and were spread out across the various groups in rec.radio.*. Taking the successful example of the news.answers group, where informational postings from across the net are sent, the group rec.radio.info was created in December, 1992, with Mark Salyzyn, VE6MGS, initially serving as moderator.

In January, 1993, many users started complaining about the volume in rec.radio.amateur.misc. This led to a discussion about a second reorganization, which sparked the creation of a mailing list by Ian Kluft, KD6EUI. This list, which was eventually joined by many of the most prolific posters to the ham radio groups, came up with a proposal to add 11 groups to the rec.radio.amateur hierarchy in April 1993. The subsequent vote, held in May and early June, approved the creation of five groups: rec.radio.amateur.digital.misc (to replace .packet), .equipment, .homebrew, .antenna, and .space.

The Current Groups

I can hear you asking, "OK, so this is all neat history, but what does it have to do with me now?" The answer is that the history of each group has a direct bearing on what the group is used for, and what's considered appropriate where.

The easy one is rec.radio.amateur.misc. It is what rec.ham-radio was renamed to during the reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize

this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, should be removed by September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is now rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there.

The first reorganization added two groups to the list, one of which is rec.radio.amateur.policy. This group was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The other added group is rec.radio.cb. This is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently Mark Salyzyn, VE6MGS. The email address for submissions to the group is rec-radio-info@ve6mgs.ampr.ab.ca. Inquires and other administrivia should be directed to rec-radio-request@ve6mgs.ampr.ab.ca. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas,

commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

[882]

Newsline report number 882 for release on Friday, July 8, 1994 to follow.

The following is a QST

An Alabama repeater trustee follows the lead of Southern California and orders a user off his machine; the ARRL objects to a proposed spectrum shift and lots of action from the FCC. These stories and more on Newsline report number 882 coming your way right now!

(*****
ALABAMA USER ORDERED OFF REPEATER

In what's believed to be only the third case of its kind, the trustee of an amateur radio repeater has ORDERED another ham OFF the frequency. Newsline told you about this happening first in Southern California. Now, a similar case surfaces in Alabama. That's where the owner of a 2-meter repeater accuses one user of allegedly transmitting harassing and racially offensive communications. The user says he's the victim of politics. This is a first for Alabama. A repeater trustee orders an amateur radio operator to stop transmitting on the system's input and output frequencies. Repeater owner Lester Crane, WA4CYA, is taking the action against Jeff Campbell, WA4ZVG. Crane tells Newsline that Campbell's actions were driving other users off the repeater.

"Has been very belligerent very critical. It has really made some topics of conversations on the down side toward No code techs. He has made detrimental comments to blacks, hurt peoples feelings. He has been talked to by the control operator and been warned. I had sent word to him myself. Warned him face to face about some of his actions. None of this went heeded." Crane, WA4CYA.

In a June 13th certified letter, Crane quotes FCC Rule section 97.205 E. That rule sez limiting the use of a repeater to only certain user stations is permissible.

"I don't really care to use his repeater it's a political thing." Campbell, WA4ZVG.

Campbell responds to charges he made racially offensive comments.

"That is not true whatsoever. I did get over on the repeater and expressed my opinion about no code technicians which is my opinion." Campbell, WA4ZVG.

Campbell tells Newsline he won't be using Crane's repeater any more.
"It's not because he's telling me not to. It is because I choose not to." Campbell, WA4ZVG

Crane calls Campbell's actions unbecoming of an amateur radio operator.

"This is something I have really hated to do. Something I have never had to do. I have put this off now for four or five months. And was hoping he did and about face and try to get with the plan like everyone else. Even with warnings and being talked to still it was to no avail." Crane, WA4CYA.

Crane has forwarded a copy of the letter to the FCC. Campbell is believed to be the forth amateur radio operator ordered off a ham repeater by a trustee using FCC rule 97.205 E. You may recall earlier Newsline reports involving the Claremont Amateur Repeater Association in southern California. In two separate cases, Clara successfully took similar action against three hams it accused of harassment.
On February first, an important interpretation of that rule came from FCC Personal Radio Branch Chief John B. Johnston, W3BE. Johnston issued the interpretation to attorney Sid Radus, N6OMS as part of the legal fight Clara was waging at the time against Tim Seawolf, KJ5KE. Johnston says rule 97.205 E -- without qualification -- permits a repeater licensee to limit use of the system to certain user stations, and to exclude anyone else.
Its to early to say whether or not a trend is developing to ban unwanted users from repeaters. But one thing is certain. The Johnston letter and the court findings in California are having a definite impact on FM and repeater operation in Alabama, and probably nationwide.

(*****
ARRL SAYS 2300 MHz REALLOCATION IS ANTI-AMERICAN

The proposed reallocation of 35 MHz of spectrum in the 2300 MHz band goes against the will of Congress and existing and future amateur uses of that spectrum must be protected. So says the American Radio Relay in comments filed to the FCC June 15th. The comments were in response to an FCC Notice of Inquiry released on May 4th. An NOI that asks for information from potential applicants for use of the spectrum at 2300 to 2310 MHz, 2390 to 2400 MHz and 2402 to 2417 MHz. Amateurs currently share 2300 to 2310 MHz and 2390 to 2417 MHz with US government users. The transfer of spectrum from federal government to private sector use is required by the 1993 Omnibus Budget Reconciliation Act. But that same congressional mandate also requires that the needs of amateurs be taken into account.

(*****
STOLEN RADIO EQUIPMENT SEIZED

An interference investigation by the FCC's Boston Office last year recently led police to stolen radio equipment valued at $40,000.
In May, 1993, the FCC investigated an interference complaint from a McDonald's restaurant in Westwood, Massachusetts. At the time the FCC was able to identify a suspect, but not prove that

he deliberately jammed equipment over which food orders were given.
But similar interference complaints made by the nearby Concord Police Department led the FCC to inspect the suspect's home. The commission investigators then informed the police that they found equipment capable of jamming the police signals, as well as piles of equipment reported missing from the Metropolitan Boston Transit Authority. The Police obtained a search warrant, seized the goods and took at least one suspect into custody.

(*****
MARSHALS COMMUNICATE UNDER THE WEATHER

When agents of the U.S. Marshals office in Nashville, Tennessee complained to the FCC that they were having difficulty communicating because of constant weather reports being heard over their communications, The agency's Atlanta Office took to the streets to locate the offending device. They soon discovered that a transmitter licensed in the Marine Coastal Service was transmitting continuously and its signal was mixing with the weather bureau transmitter located on a nearby building. The fix? The signal mix was so severe that it required the marine transmitter to be taken out of service by the licensee.

(*****
CAL LICENSE FRAUD UPDATE

Not much news to report this week in the ongoing government probe of alleged corruption in the California's VE testing program. Rumors out of Washington do seem to indicate that the investigation by the FCC is winding down. This means that we should soon know the names of those the Commission feels are guilty of wrong doing.
You can expect the FCC to issue heavy fines and act to revoke the licenses of any ham that the Commission can prove was involved in the statewide licensing scam. Also look for additional punitive action from other government agencies as well.

(*****
RUSSIAN AID TO RWANDA

A Russian Amateur Radio Emergency Service team is using ham radio to provide humanitarian assistance in Rwanda. RW3AH who serves as Russian ARES Chief Coordinator in Tanzania told the Ohio Penn DX newsletter that the R3ARES headquarters club station of the Russian ARES has moved with a government rescue team to Tanzania from their recent operation in the former Yugoslavia. The rescue team is from the Russian Ministry of Emergency Situations. It is providing humanitarian United Nations aid for Rwandan refugees in Tanzania. This ham radio station is only active daily during the regularly scheduled Emergency Relief Net on 14.292 MHz at 07:00 UTC. Please listen carefully to avoid

accidentally QRMing this important life saving communications.

(*****
SAREX STS-65 SAREX

The STS-65 Space Shuttle mission, with the Sarex Shuttle Amateur Radio Experiment payload on-board should be in orbit as we go to air. The orbiter was slated for launch on Friday July 8 at 16:43 UTC.
The STS-65 Space Shuttle Columbia mission will carry Amateur Radio operators Don Thomas, KC5FVF and Bob Cabana into a 28.5 degree inclination orbit for a 14 day mission. The primary objective of this flight is to perform research as part of an International Microgravity Laboratory experiment.
If time permits, some thirteen schools in the U.S., Japan, and Germany should be able to hold ham radio contacts with the astronauts. Ten of these school group contacts will be performed using AMSAT's worldwide network of telebridge stations. The telebridge which is provided as a public service by the Darome Connection Incorporated allows students to talk to the Astronauts through a remote ground station that is linked to the school by telephone.
The Goddard Amateur Radio Club station WA3NAN in Greenbelt, Maryland expects to retransmit some of these school contacts as part of their Shuttle Transmission activities. Other clubs around the nation are expected to retransmit full mission audio over their repeaters and high frequency bulletin networks as well.

(*****
ISRAEL CEPT

Israel has become another new signatory to the pan-European CEPT universal Amateur Radio licensing agreement. Under the accord, Israeli radio amateurs may now operate in the nation of any other CEPT signatory without the need to file for either reciprocal license or operating permit for the term prescribed in the terms of the agreement.

(*****
UK 10 GHZ FIRST

The GB2RS News Service of the Radio Society of Great Britain reports that the first 10 GHz moonbounce QSO between two British stations has taken place. The contact took place at 23:40 UTC on the 19th of June, when G4RFR in Dorset worked G3WDG in Rushden, Northants. G4RFR is the club station of the Flight Refueling Amateur Radio Society. Good reports were exchanged and both stations were able to hear their own echoes as well as each other.

(*****
DX

In DX, the ARRL says that its DXCC Field Checking program has generally been a success. This, with about 400 certified volunteers at work.
But there have been problems in two areas. These are the submissions of QSLs for countries not eligible for field checking, and applications in which the call sign and the DXCC country do not correlate. The latter are countries which are eligible for field checking as noted in the League's DXCC Countries List.
The league says that these errors are caught at headquarters, but they slow down the entire DXCC processing system.

(*****
NEWSLINE ALMOST SOLVENT

Some good news to report on the financial status of Newsline. Dr. Norm Chalfin, K6PGX, reports that the Newsline Support fund has now received enough in the way of donations to keep the service alive through at least the middle of November. Norm says he was amazed by the generosity of listeners and by the many letters of support that accompanied many donations. He, along with our Producer Bill Pasternak, WA6ITF and everyone at Newsline say thank you for showing how much you really do care.

(*****
FIELD DAY 1994

It was long hours, lots of contacts ... and plenty of fun. That's how many hams are describing Field Day '94. This yearly amateur radio contest brings out hams from coast to coast who spend an entire weekend making as many radio contacts as possible. In Alabama, Field Day typically means plenty of heat, humidity and mosquitoes the size of automobiles. At least they seem that big. But members of the Shelby Co. Amateur Radio Club get a break. A strong storm front brings unseasonably cool weather -- great for camping out, and great for the ham bands.

"Six meters was open pretty good at the beginning of the contest. We worked as many stations as twenty four hours last year in the first twenty minutes on 6 meter sideband today." Mark Parmley, WA4UHC Field Day Chairman.

While the transmitting goes on ... Michael Spanos, KA4VCA is hard at work, too. He has what many in this group consider the most important job: Fixing the Saturday night meal:

"We had some barbecued lamb, barbecued chicken. We had about twenty pounds of each and are now digesting it all." Spanos, KA4VCA.

Tom DeSaulniers, K4VIZ, helps set up the 40 meter CW station:

"Field Day means amateur radios proving that they can get their radios out in the field and make it work for twenty four hours more so to me than the competition of seeing how many contacts you

can make. I think it is more important to have fun and make the
equipment go for twenty four hours win the contests."
DeSaulniers, K4VIZ.

Severe storms temporarily disrupt Field Day contesting. After
the weather calms down, the stations fire back up, in search of
contacts, from the low bands to UHF.
The weather brought more than just temporary delays for some
Alabama Field Day contestants. Severe storms forced one group to
shut down for the weekend.

(*****

And with that, we will shut down this installment of Newsline.

Thanks, Rob, for taking the right attitude towards the CB "problem". I have helped several ex-CB types become hams, and all were motivated and enthusiastic. CB is a great introduction to radio for kids, especially if they have a ham friend who can pick up rigs for them at flea markets and help them to put up dipoles.

I like your active approach, though. I'd comment that I have found the people using SSB to be more interested in going further in radio (they also tend not to talk with the phony "CB twang" voices).

Hello David,

I replaced all the phone lines, as the dogs apparently chewed through a couple under the house..... have to put everything in PVC !

Have you been doing anything with the packet switched amateur radio data?

is Dxing still alive and well on 20 meters and other HF frequencies? I remember a trip I made to Dayton with a friend back in the 70s, and wonder if the hobby is still alive and growing.....or have computers taken over the interests of enthuiasts ???

>black hole as far as most signals were concerned...

I'm in central NJ, near Morristown, only about 60 miles out of PA.

Yes, from my experience, I do seem to be in a rather hot location,
where DX can be worked consistently with low power, bad antennas,
in a valley. Go figure.

With the way everything above 15Mhz sounds lately, I wouldn't be
surprised if ducting effects are finding their way as low as
20. :-(

>to read the included text to understand the followup.

Yes, I saw it. Also, looking back, it was *your* comment in the first place
that said you could cancel the -40 from both sides. The original d poster
didn't. (He said the formula worked because the scales corr
corresponded at -40.) Everyone who jumped on you said of course you could
you couldn't just cancel them.

Thus, the only idiot saying that you can cancel them is you! Don't
try to brush it off on someone else--like you alwasy do whenever
you suddenly realize what you said earlier was wrong!!!!

808. SAREX Keps 7/15

>plaws@comp..uark.edu (Peter Laws) writes:

>>This is ridiculous. 6 terminals paid for by you and me and still only
>>one part-time data entry person. Imagine the folks that have to wait for
>>*real* licenses!

>Excuse me, how are you paying for your license? Last I checked, your licenses
>were free and that was the way you (US citizens) prefered it ...

Please read the whole thread, Mark. The *real* licenses to which I refer
are the commercial licenses (Gen'l Radiotelephone and -graph), not
Amateur. The same data entry person does both, though I have read that
the delay for *real* licenses is a mere 8 weeks.

I am fully aware that amateurs get a free ride in the US of A, although
the FCC is about to start selling callsigns, thereby diluting yet another
amateur radio tradition. (Before someone screams about the $5.75 test
fee remember that the FCC sees none of that)

BTW, speaking of Canadians, what is a good study guide for the Canadian
ham license? I will be there in December and plan to take the test.
Yes, I have a valid Canadian address.

73,
Peter Laws, N5UWY - V31WY - VE2???

Well, yes, but the "-40F = -40C" appeared in the context of a thread
in which the "F" and "C" had earlier appeared as variable names in
an equation...

* STS-65 SAREX ACTIVITY *
========================
The Space Shuttle Columbia had a flawless liftoff on 08-Jul-94 at 16:43:00.083 UTC for a 14-day mission in space. Columbia has been assigned Space Command Object Number 23173 and International Designator 1994-039 A.

The Shuttle Amateur Radio Experiment (SAREX) packet robot on board the space shuttle Columbia was activated on 11-Jul-93. The following highly edited text was copied on 12-Jul-94 at WA5ZIB from the STS-65 shuttle mission:

W5RRR-1>QST [07/12/94 17:17:00] :
Hello from KC5HBV and KC5FVF aboard the Space Shuttle Columbia
We're well into our mission now conducting materials processing and life sciences experiments that are paving the way for future operations aboard our international space station. We've talked to schools in Texas, Florida, Hawaii and Germany via SAREX and it's been great.

W5RRR-1>QRZ [07/12/94 17:17:57] :

W5RRR-1>SAREX [07/12/94 17:17:59] :
This is STS-65 SAREX Robot station W5RRR-1
onboard the Space Shuttle Columbia.

[Info via WA5ZIB]

* GARC SHUTTLE RE-TRANSMISSIONS *
==========

The Goddard Amateur Radio Club (GARC) invites interested people to tune in to STS-65 shuttle ground communications transmissions. As a public service to the Amateur radio community, the GARC retransmits space shuttle air-to-ground communications. During the STS-65 mission which also carries a Shuttle Amateur Radio Experiment (SAREX), Amateur radio operators, shortwave listeners, and individuals with scanners can listen to these communications on the following HF (single sideband) and VHF (FM) frequencies:

3.860 MHz (LSB)
7.186 MHz (LSB)
14.295 MHz (USB)
21.395 MHz (USB)
28.650 MHz (USB)
147.450 MHz (FM) in local Washington D.C. metro area

[Info via Erich Franz Stocker, N3OXM]

* APOLLO ANNIVERSARY SPECIAL EVENTS *
==========

At least 12 amateur stations associated with the National Aeronautics and Space Administration will be active July 19 to 22 to commemorate the 25th anniversary of humans landing on the moon, on July 20, 1969, on Apollo 11. The operations will begin at 0700 UTC July 19 and end at 0500 UTC July 22, coinciding with the time the Apollo Moon Lander (the Eagle) was on the moon's surface in 1969.

Stations are expected to be on modes including CW, SSB, FM, packet, Pactor, Amtor, RTTY, SSTV, ATV, and amateur satellites. Here are the 12 stations expected to be active:

Ames Amateur Radio Club, NASA Ames Research Center, Moffett Field, California: K6MF (AARC, Box 73, Moffett Field CA 94035-1000).

Dryden Amateur Radio Club, NASA Dryden Flight Research Center, Edwards, California: KF7GD (NASA DFRC, Attn: Dryden ARC, POB 273, Edwards CA 93523).

Goddard Amateur Radio Club, NASA Goddard Space Flight Center, Greenbelt MD: WA3NAN (GARC, PO Box 86, Greenbelt, MD 20768-0086).

Guam Contingency Landing Site Amateur Radio Group: KC4YDP/KH2 (NASA RADIO, Kennedy Space Center FL 32899).

NASA Headquarters Amateur Radio Group, Washington, DC: N4ZR (2003 Sarazen Place, Reston VA 22091-3809).

Jet Propulsion Laboratory Amateur Radio Club and Goldstone Amateur Radio Club, Jet Propulsion Laboratory, Pasadena, California: W6VIO (JPLARC, M/S 168-327, 4800 Oak Grove Dr, Pasadena, CA 91109).

Johnson Space Center Amateur Radio Club, NASA Johnson Space Center, Houston, TX: W5RRR (JSC ARC/W5RRR, Johnson Space Center, Houston

TX 77058).

Kennedy Space Center Amateur Radio Group, Kennedy Space Center, Florida: KC4TCV (NASA RADIO, Kennedy Space Center FL 32899).

NASA Lewis Amateur Radio Club (NLARC), NASA Lewis Research Center, Cleveland, Ohio: AK8Y (NASA Lewis Amateur Radio Club, 21000 Brookpark Rd, MS 54-6, Cleveland OH 44135).

Marshall Amateur Radio Club, NASA Marshall Space Flight Center, Huntsville, Alabama: WA4NZD (Marshall Amateur Radio Club, CM21X, MSFC AL 35812).

Stennis Space Center Amateur Radio Club, NASA Stennis Space Center, Mississippi: K5GY (Stennis Space Center Amateur Radio Club, Bldg 1201, Stennis Space Center MS 39529).

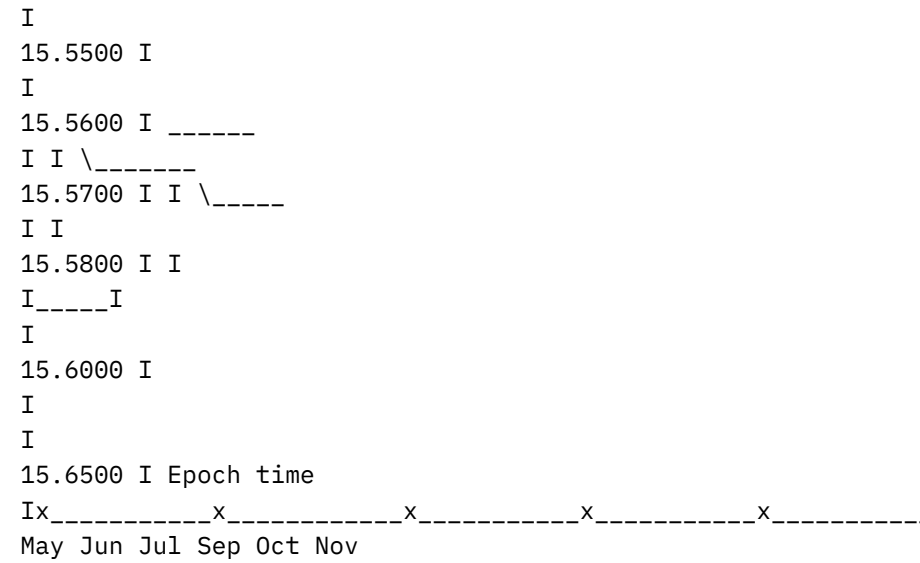
Wallops Island Amateur Radio Club, NASA Wallops Flight Facility, Wallops Island, Virginia: KE3ND (Wallops Island ARC, NASA Wallops Flight Facility, Building E-134, Wallops Island VA 23337).

White Sands Complex Amateur Radio Group, NASA White Sands Test Facility, Las Cruces, New Mexico: KF7E (P.O. Box 627, Organ NM 88052).

[Info via ARRL]

* MIR ORBIT ADJUSTMENTS *
==========
The following graphic depicts the mean motion (which is inversely proportional to mean orbital altitude) of Mir over the past several months:

TIME REVOLUTION (summary) for MIR Complex 16609
(Period= day 130 to day 185 1994)



Orbit adjustments were made on 12-March, 12-May, and on 03-July when Mir docked with the Soyuz TM-19 module.

I'm looking at a commercial radio installation and hope this is a reasonable place to ask the question. (If there is a better spot I'm _sure_ I'll hear about it)

This installation will require encrypting, and I want to hear any experience you have with the Selectone ST25-AGP installed in the Motorola 300 radios.

Thanks in advance

815. HELP: Azden PCS-5000 "UL" Problem.

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 15:22:59 UTC
From: n8nxf@cyberspace.org
Message-ID: <3069kj$qf9@grex.cyberspace.org>
Source record: 263420

I picked up a 2M Azden PCS-5000 at a swap for cheap. I was told that it only put outa few mW but worked fine otherwise. I figured the final was probably blown.
I ordered an owners manual, service manual and schematics from Azden and proceeded to try to figure out was what wrong with it. The SAV-7 power amplifier module was indeed bad so I ordered a new one from RF Parts and installed that. I also checked to make sure that the relay was OK. (Relay? Why not PIN diodes?) Now the radio puts out a full power. Great!
From the time I first put this radio on a power supply I would suddenly get a "UL" (VCO unlocked) on the display. Turning it off and on a few times would resolve the problem. After getting the service manual, I went through and made sure that the various reference oscillators were adjusted according to spec. I also adjusted the VCO coil so the VCO control voltage was as per spec. at the given frequency. I figured this would solve the VCO unlocking problem. It didn't.
The first time I put the radio on the air was during our club's net on 146.960, -. After a 1 minute transmission I was told that half way through my transmission it became unintelligible and a few listeners were able to find me on 146.970 simplex! Everything on my end looked fine. The display was showing 146.360 and the power output indicator was fine during X-mit.
After putting the rig back on the bench and popping the top, I suddenly had the display go to "UL" while receiving on 146.920. Cycling power restored the display. This happened two more times and then the radio worked fine for the remaining two hours I had it on.
I've bounced it off the bench and pushed on various PC boards in an attempt to find a bad connection / trace, etc. No luck. Has anyone else had this problem with the Azden PCS-5000? Is this a common problem with this radio? When I talked to Azden about it, I was told that the VCO needed to be rebuilt. I think it's more of a uP / PLL problem.

Thanks for any help!
Klaus (N8NXF)

821. Wanted Low Band Mitrek

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 15:51:21 UTC
From: craigr@n6nd.nosc.mil
Message-ID: <1994Jul15.155121.11382@nosc.mil>
Source record: 263458

I'm looking for a couple of low band Mitreks for use on a packet link on 6 mtrs. If you have one or two that you would be willing to sell or know where I might find these radios, your help would be appreciated. 73

Rick Craig, N6ND

>I think a one week cycle is a little optimistic. However, I think
>that Amateur Radio Operators should defray the cost of processing
>license applications. If we did, then we would have a reason to
>complain if the processing time is excessive.

funds collected get added to the general fund pot and then disbursed as
directed by Congress. no connection from source to drain, as it were.

>If I understand the situation correctly, Congress would have to pass a
>law that would allow the FCC to assess fees for processing amateur
>radio applications

this part is done...

>and allow the FCC to use the revenue to pay the
>salaries of additional employees. I am not sure that it is quite that
>simple. If the present computer system does not allow multiple access
>to the data, then throwing people at the problem will not help, as an
>example.

it's multiple access - but there have been problems such as a down printing
system (from a phone call on wed 7/13..got a couple of ex-students that have
been waiting for some time....)

>If you really want to help, I suggest a letter to your representatives
>and to the FCC that makes the follwing points:

OK -- but be careful what you wish for....the government can get rid of the
amateur radio licensing problem by doing away with amateur licenses as well.
remember you've got a new computer system startup, new 610s, and a larger
number of applicants than ever before...by the time congress acts the problems
will be fixed.

>My Ringo Ranger II works gangbusters. Not because it's a great antenna,
>but because it's up reasonably high.

I've had a Ringo Ranger on top of a 60' tree for about 3 years. It still outperforms the Isopole on top of another tree. I buy all the Ringos I can get at swap meets. For a definitive article on "Ring Gamma-Matched, end-fed half-wave verticals" see the May 1973 or 1974 issue of Ham Radio magazine. If you can't get a Ringo to work for you then you deserve to pay for a Diamond or Comet.

From: ham@wam.umd.edu
Message-ID: <306cv4$qqd@cville-srv.wam.umd.edu>
Source record: 263460

OK, this idea has been going around in my head for quite some time, so here it goes...

Take a standard beam Yagi, or an electrically steered phased array.

The rotate either the beam or the array (your choice, will call "antenna" from now on) REALLY REALLY fast - so much so that the receiving end can't even tell the antenna's spinning.

Just think! High gain IN ALL DIRECTIONS!

I know it's flawed, because of that time-averaged thing, but imagine a receiver that could do a really good interpolation job, or even just a smoothing circuit...

And without it, you'd need to be rotating the antenna (such that you get samples of the carrier) at roughly 2.2 times the carrier freq. So for 2 meters, that's about 300 million revs per sec. OK, OK, for a physical antenna that would be hard to do. But a phased array? Y not?

How does the service police itself?

I recently tuned into a local repeater to hear an exchange of continued profanity, attempts to jam signals, music being played over conversations, 28 WPM code practice, and more by a young kid, some drunk adults, and one pot smoking stoner. This all occurred within a 1/2 hour period. The offenders even gave their call signs. How do you get these people to cease, who has legal authority to enforce laws pertaining to these things?

My goodness, if all you want is to work local repeaters and short distance simplex, just buy an SO239 connector (about a dollar) and five pieces of 1/16" brazing rod. Solder the rods into the five holes in the connector, bend four of them out to a groundplane, and cut all to 19-1/4" inches. Drop it into the top of a piece of 1" EMT and you have a nice simple effective base station antenna that cost you less than $10. And in my experience, it'll work nearly as well as a Ringo.

The coax to hook it up will cost more than the antenna did.

[stuff deleted]

The TH-78E IS the European version of the TH-78A, so the bands in question are 2m/70cm. I have induced TVI on my own TV transmitting on my 78. The path (in my case) is not through the antenna, but through the chassis. Where I stand in the room (in a few inches space) makes a big difference. I would check to see if the neighbor is using some type of antenna amp too. I have found those to be rather sensitive.

Probably union rules.
> Purdy ridiculous, eh?
Yes they are.
Or privacy or conflict of interest. And I suspect it would take the
same kind of reorganization to accept volunteers for data-entry that
it did to set up the VEC program. It's just a shame they can't accept
ear-marked donations in order to hire a temp.
Maybe the route is to see if hams, through the VEC's, could fund a
temp at the office.

>(which I understand they did), then they bungled. No one is doing me a service
>by saving me 10 bucks and making me wait 17 weeks.
>....

NO! NO! NO!

Fees for Amateur Radio licenses are a very bad idea. We get use of the
frequencies and licenses at no charge because we provide a public service.

If we get the Congress thinking about ham radio as something that
should pay its own way by paying fees and such, they will simply sell
all our spectrum space to the highest bidder and we will have no spectrum
space left.

We are a valuable resource to the people of the country. We are not
just a bunch of freeloaders asking for government handouts.

Amateur radio is the cheapest and often the most dependable form of
emergency communication around. Congress should look at FCC funding
for amateur radio as a cheap way to buy emergency and public service
communication. If Congress funded the FCC to have a 2 day turn around
on licenses and widespread crackdowns on bootleggers, it would be by
far the cheapest and most effective way to provide emergency and public
service communications.

Look at it this way. The FCC apparently has one person fulltime
providing license processing. There are probably tens of thousands of
government employees working fulltime providing communications services
that work less well than the amateur radio service. If ten more FCC
employees were devoted to license processing, that would break the
backlog almost immediately. If a few dozen more FCC employees were
dedicated to hunting down bootleggers, and handing out $10,000 fines,
that would help a lot. (Bootlegger hunting could probably be made to
pay for itself if Congress would allow it to do so.) At a total
additional cost of less than 1 more FCC person per state, great
improvement to emergency communications could be attained.

834. GB2RS News 17th July 1994

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-15 18:08:38 UTC
From: dave@llondel.demon.co.uk
Message-ID: <774320918snx@llondel.demon.co.uk>
Source record: 263421
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 17th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First the headlines, all of which concern licence changes:-

Power restrictions have been lifted on parts of the 1.8 and 50MHz bands,

Antenna and ERP restrictions no longer apply on 50MHz,

Unattended digital operation now needs notifying to the RIS, and

There are changes to the computer logging requirements.

With immediate effect, the Amateur and Amateur (Novice) Licences have been amended by the Radiocommunications Agency. In a Gazette notice, to be published this Monday, the 18th, the RA announced the following major changes:

Holders of the full Amateur Licence (A) may use 26dBW (that's 400 watts) on the whole of the sub-band 1.81 to 1.85MHz, removing the power restriction on 1.81 to 1.83MHz. The power limit for 1.85 to 2MHz remains at 15dBW.

Holders of the full Amateur Licences (A) and (B) may use 26dBW between 50 and 51MHz. The maximum permitted power between 51 and 52MHz is still 20dBW. The ERP and antenna height restrictions have been removed from the whole of the 50 to 52MHz band, allowing the use of any antenna. Maritime Mobile is now permitted on 50MHz.

Holders of all types of licence, full and Novice, (A) and (B), are now required to notify their local Radio Investigation Service office of unattended digital operation. This additional restriction has, unfortunately, been necessary following a number of problems with unattended operation. The procedure is far less onerous than that required for a repeater or beacon on a hilltop site, and requires only the agreeing of suitable emergency close-down procedures.

The final change, which also affects all licensees, concerns logs which are kept on a computer. At the main address, a licensee must be able to provide a print-out of the log on demand. When not at the main address, it must be possible to provide a copy on disk, followed later by a print-out.

The full text of these changes is available in the London, Belfast and Edinburgh Gazettes, obtainable from HMSO stationers. The full text, plus explanatory notes and a list of RIS addresses will be published in the

August edition of Radio Communication, scheduled to be posted to all RSGB members in the week commencing the 25th of July. In the meantime, members should contact their RLO or Headquarters if they have any queries.

A DXpedition to Lithuania, is scheduled to take place from next Saturday the 23rd until Monday the 1st of August. David, G0BZF and a multi national group will operate as LY94BDX. Operation is to be on all bands CW, SSB and packet but UK stations are recommended to check 14.055, 14.295MHz, 3.555 or 3.72MHz. Skeds can be arranged by contacting G0BZF on 0932 566435.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From St Pierre and Miquelon, FP/KA1NCN will operate from the 19th, until the 25th of July on 10 to 160 metres, CW, SSB and RTTY.

From the Maldive Islands, G0PBV will sign 8Q7AE from Tuesday the 26th of July until Tuesday the 9th of August, on 10, 15, 20 and 40 metres.

And from the Principality of Seborga, some 25km north-east of Monaco, 3A2LF will sign 0S0C from now until Monday the 18th on CW only. I1RBJ is also active as 0S1A over the weekend.

Now the rallies we know of for today, Sunday the 17th of July:

The McMichael Rally and Car Boot Sale is being held at the Haymill Youth and Community Centre, Burnham Lane, near Burnham railway station, Slough. Doors open 10.30am. The event features a car boot sale, no advanced booking is required. Talk-in will be on 2 metres, channel S22.

The Radio Amateur Invalid and Blind Club (RAIBC) Romsey Picnic is being held at Broadlands, Romsey, Hampshire. All members, families, friends and supporters are welcome. The event features a junk sale, a bring and buy stall and a grand draw. Refreshments will be available and talk-in will be on 2 metres, channel S22. The callsign GB0IBC, will be aired throughout the event.

Next the two events we know of for next Sunday the 24th of July:

The Colchester Radio and Computer Rally is to be held at St Helena School, Sheepen Road, Colchester, adjacent to the Colchester inner bypass. The event, which opens at 10am, has trade stands featuring a wide range of radio and computer items, a car boot sale and a bring and buy stall. RSGB Morse Tests will be available on demand, but remember to bring two passport size photographs. Talk-in will be on 2 metres, channel S22. For further details contact Frank, G3FIJ on 0206 851189.

The first Humber Bridge Amateur Radio Rally is to be held at the Exhibition Centre, Freightliner Road, off Clive Sullivan Way, Hull. The site has easy access and is one mile from the bridge. Doors open at 11am, 10.30 for disabled visitors. The event features a bring and buy stall. Refreshments will be available and talk-in will be on 2 metres,

channel S22. For further details and a booking form contact Roly, G0UKS on 0482 837042.

Now for the HF contest news:

The RSGB Low Power Field Day CW Contest takes place today Sunday the 17th July from 0900 to 1200 and from 1300 to 1600 UTC, using frequencies in the range 3.510 to 3.560MHz and 7.010 to 7.040MHz. See April's RadCom page 80 for full details.

Next some VHF contest news:

The RSGB 144MHz Low Power Contest will take place next Saturday the 23rd from 1400 to 2200 UTC. It features four entry sections: single operator fixed, single operator portable, all others and Listener.

The RSGB 432MHz Low Power Contest will take place next Sunday the 24th from 0800 to 1400UTC. April RadCom has further details of both of these low power events.

Special event stations active this week include:

GB800DON, operated next Saturday the 23rd, by members of RAF Finningley Amateur Radio Society for Doncaster's 800 years Festival Celebration. The station will be located at the Gala event at Stainforth Welfare using HF CW and SSB, plus FM and SSB on 2 metres and 70cm.

GB1WSF, Washington School Festival, will be active from tomorrow, Monday the 18th until Friday the 22nd of July from Washington School in Tyne and Wear. Operation will be on VHF, UHF, Packet and SSTV with the students taking part in the activities and demonstrations of amateur radio.

During this weekend, many special event stations will be active from lifeboat stations. This is to raise money for the Worked All Britain 25th Anniversary Lifeboat Appeal. Full details can be found in the July RadCom.

And now the solar factual data:

The period from the 4th to the 10th of July has seen an increase in solar activity with an M flare and numerous B flares every day over the period. The geomagnetic activity has varied between quiet to unsettled but the general decline has continued and levels are now the lowest since last November.

The sunspot index meaned at 59, an M1.3/1N flare was reported on the 7th, and B flares up to a B8.2/SF were reported every day. Solar flux levels did not vary much but tended to rise slightly, averaging 85 units. The 90 day mean flux level was 80 units on the 10th of July.

The geomagnetic Ap indices have continued to decline from very unsettled down to quiet, with the period averaging 8.7 units. However, the 10th was down to only 3 units. The state has been 'nil nothing to report'

throughout the period. The aa indices, as supplied by the British Geological Survey for the 28th of June to the 4th of July, saw a general quietening with the daily index dropping from around 48 nanoTeslas to 19 by the 4th. The 28th was very disturbed with a midnight period of 102 nanoTeslas. By the 4th, levels had dropped to around 12 nanoTeslas. The period averaged 35.6 nanoTeslas.

Bartells rotation 2198 began on the 7th July. The X-Ray flux levels have remained high and averaged A5.8 units. The electron fluence levels of more than 2 mega electron volts are continuing to decline and were down to nearly normal levels by the 10th of July; this should help to stabilise the HF bands.

I'll repeat the figures. Spots - 59; Flux - 85; Ap index - 8.7; X-ray flux - A5.8 .

Now the ionospheric data for Central France:

The F2 daytime critical frequencies at Poitiers, as reported by Meudon, have improved over recent levels and averaged 7.3MHz. The 6th was up to 8.3MHz which was the highest level for the past 2 months. The darkness hour lows averaged 3.5MHz with periods of blanketing E being reported some days. The highs are now at about 20.00 hours and the lows 04.00 hours.

I'll repeat the figures. Highs - 7.3MHz; lows - 3.5MHz.

Now the ionospheric data for the north:

The F2 daytime critical frequencies at Ekaterinberg averaged 6.2MHz and the darkness hour lows 4.3MHz.

The latest forecast for the minimum of cycle 22, based on the time since the first spotless day reported in the autumn of 1993, will be late 1996.

I'll repeat the figures: Highs - 6.2MHz; lows - 4.3MHz.

And lastly the solar forecast:

This week, the active side of the sun will be rotating away. Solar flux levels are expected to be about the 80s, geomagnetic levels are expected to be quiet becoming unsettled towards the end of the week. MUFs are expected to be about 21MHz in the south during daylight, and 14MHz for the darkness hours. Northern levels will be down on these. Sporadic E is still present most days on 10 and 6 metres, but the intensity is declining.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns issued were in the G0 Uniform Zulu and G7 Sierra Lima series, and Novice calls in the 2 0 Alpha India and 2 1 Delta Delta series.

--

GB2RS is prepared by the Radio Society of Great Britain and is broadcast
in the 80m, 40m, 6m and 2m bands.

In article <znr774240733k@leotech.mv.com> erobbins@leotech.mv.com (Ed Robbins) writes:
| 1. I live in Sandown, NH and I'm looking to take the technicians test. Can
| anyone tell me were and when I can take the exam in my area?

I'm not sure where Sandown is. There are several exam sessions each
month in southern NH / northeast MA, though July and August are slow
months. Next Thursday, July 21, there's a session in Salem, NH.

| 2. I actually bought an HT today and have been listening in quite eagerly.
| This has only fueled my desire to get on the airwaves. Will an HT be
| capable of using from my house? I have no problem receiving signals,
| some of which are very far away.(I know this is through a repeater).

Yes. It depends on where and whom you want to reach. It turns out to
be inexpensive and simple to get a good antenna on the roof which you
can use with the HT while at home; likewise for your car.

| 3. Where can I get a list of repeater frequencies?

There are several resources, the most comprehensive of which is the
ARRL Repeater Directory ($6), updated yearly, available from the ARRL
or ham equipment outlets (HRO in Salem has all this stuff).

| 4. Does the FCC allow you to operate on the air once you pass the test?
| The FAA issued me a temporary certificate when I passed my flight exam,
| is there a similar policy for radio use?

No. Take the test as soon as you can, so the waiting period starts as
soon as possible. You won't be able to transmit till you receive your
actual license in hand with a call sign on it.

On the other hand, once you have a license, if you take more tests and
upgrade, you may begin using the new privileges immediately without
waiting for the new license. But you must have received your first
license.

| I would appreciate any help I can get. If this is not the proper place to
| ask these questions then I apologize for the wasted bandwith, and would
| appreciate some direction as to where to ask. Thanks in advance.

This is a good place to ask. Good luck!

Just to make it clearer...

There are fees for examination via National Radio Examiners--W5YI...
those are paid to the Test Center Manager in whatever form is
acceptable locally.

Now that the FCC is charging licensing-associated fees, the FCC fees
are paid with check(s)/M.O.s made out to the FCC.

There two fees schedules (and payees) are seperate.

I believe that the monies received by the FCC are deposited into
the U.S. Gov't General Fund.

I have had my R7 since they first came out (late '91?). I run a KW into
it on all bands 40 thru 10 (well, except 30, where there IS a power
limitation) and I have never had a trap failure - not even heard of
anyone having a trap failure. Also the SWR curves for my installation
match (or in some cases are better than) those published by Cushcraft.

>I am looking for an AM transceiver, in a frequency above 144.1 MHz.
>Does anyone know if an AM handheld unit is available?
>(I also need it to be 1 watt or less, for remote control, in
>compliance with the power limitation, or easily modifiable down to 1w.)

If you're talking about remote control of a rig or repeater, it has to be done on 222MHz and up. If you're talking about remote control of a model plane or car, it's usually done on 6m.

>Assuming I were to build my own AM Double Sideband Supressed Carrier
>(DSBSC) radio for remote control use, could anyone recommend a
>frequency that would be the least bother to other hams, and would also
>be free of interference?
>

There's no AM segment in the 2m band-plan. 144.20-.275 is set aside for general SSB operation, and is probably the only place you'd be able to run a low-power AM rig. 145.50-.80 is set aside for "miscellaneous and experimental modes," so you could possibly run AM there. However, in many areas of the country this segment has been taken over by packet stations.

I'm pretty sure it is illegal in the U.S.A., but I knew a couple of guys
who did it anyway before getting their Novice tickets -- it was pretty
clumsy the way they did it, transmit by keying the mike and down on AM, and
receive on SSB.

That'd make an EXCELLENT April 1 article. I recommend writing it up. I bet you could take in a major portion of the Ham community with it. <^_->

Let's imagine a strange beam. It has uniform gain over 36 degree angle and receives nothing over the rest of the rotation.

In the absence of "cosmic background" noise is constant. It is relatively unchanging over most of the rotation. Most urban or suburban noise levels are also relatively insensitive to where the antenna is aiming. So that noise exists with out regard to antenna directivity.

Two things WILL vary with aim, however. Powerline static and storm static will vary depending on whether you are pointing at them or not. SO in this case they'd be attenuated 10dB. Signals also will depend on whether you are pointing to them or not. So your signal level drops 10dB. But the signal is what you want to get. ANd your ability to DO something with the signal depends on its power level. But the scanning antenna has simply reduced the signal level by 10dB. SO your signal to noise ratio drops the same 10dB for

most forms of noise.

Worse yet assume the powerline static is positioned 10 degrees off from the signal's location. WIth the postulated antenna you can slide the "cutoff" on the beam pattern over until the static goes away with the signal present. This is a VERY high signal to noise ratio situation if we "neglect" for the moment the other background noise. But if we rotate the antenna we get equal time on signal and noise so we are back into the low signal to noise ratio domain a non-directional antenna would give us.

ALl that said, except for the powerline static postulated, the rotating antenna is basically a "chopper" attenuator on the antenna lead which switches you from a signal plus noise source to a noise only source. It gives a distinct disadvantage in the signal to noise race.

Could anyone tell me what kind of symptoms you would see with a "blown" trap? I have one that is acting a little strange right now (basically, a lack of reception across the bands... the radio is fine). I put an ohm meter across the coax feed line from the antennae (disconnected from the radio, of course) and it appears to be a short. I wouldn't have thought that it should look like this. However, I'm not sure what the traps will do. I thought that they were supposed to "trap" electrically the length of the antennae at the given frequencies. With an ohm meter which uses a DC voltage, would the antennae appear as a short to ground? THanks for any information!

>receive on SSB.

Yes, but that would be A1 emission; A2 is where the carrier is kept
on the air and a tone oscillator is used to send code - similar to
how your repeater's ID is sent. I just need to know if A2 is legal
or not.

If someone can give me the CFR part number for 11M I'll check to see
if the library has a copy and report back on what's legal.

852. Re: Enough already

You're nuts! I said the -40 couldn't be cancelled. Read the quote |
above; that's what the original poster said, not me.---------------+

As for your second statement, I never waver from my posted opinions
whether they be about code or criminals. I believe you must be having
a hallucination/flashback from some drugs you took in the 60's.

Why don't you ever give your name and callsign? If you want to trade
flames we can take it to email.

Jeff NH6IL

If you are using the sstv software written by Ben Vester, could you email
me the .bas files saved in ascii format?

I have an Atari ST, and would like to try adapting the programs.

>

Yea, that seems to be the area. There are always a lot of spots on the DXCluster (the one here reaches from southern Virginia into Connecticut somewhere) from NJ, PA and NY, and we can barely hear the DX here, if we can hear them at all. Maybe the Chesapeake is absorbing the signals. <g>

860. need IC-4AT for space flight

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-16 01:26:20 UTC
From: geragas@next19pg2.wam.umd.edu
Message-ID: <307cvs$71d@cville-srv.wam.umd.edu>
Source record: 263396

The University of Maryland Radio Association, is trying to acquire one or two ICOM IC-4AT UHF radio units to be used in a satellite data downlink subsystem

We are aware that production of this model has been discontinued, but we are interested in this particular model because it fits our requirements.

It is important that the unit is in (relatively) good condition, has not undergone extensive abuse and, especially, has not suffered a drop.

Please, if you have a IC-4AT UHF radio and you consider selling it or donating it for space flight call:

Dimitris A. Geragas

SYNOPSIS OF ACTIVITY

Solar activity was at low levels. Region 7756 (S12E59) was
assigned.

Solar activity forecast: solar activity is expected to be
generally at very low levels, with occasional C-class flares.

The geomagnetic field has been at quiet to active levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels, with possible local
nightime sub-storming.

Event probabilities 16 jul-18 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 16 jul-18 jul

A. Middle Latitudes
Active 30/25/25
Minor Storm 10/10/10
Major-Severe Storm 05/10/05

B. High Latitudes
Active 30/25/25
Minor Storm 15/10/10
Major-Severe Storm 05/05/05

HF propagation conditions were near-normal over all
regions. A few brief periods of minor signal degradation may
have been observed by a few high-latitude stations (on
transauroral paths). Otherwise, near-normal conditions
prevailed. Similar conditions are expected over the next 3
days, through 18 July. Conditions should begin gradually
stabilizing on 18 July for transauroral paths.

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
---
14 Jul: 1955 1959 2002 C2.3 SF S14E77 III,V

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep

Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

: An ICOM 735 with the internal keyer has the reputedly common
: problem of an extremely fast rate of change on the keyer speed
: pot. A tiny bit of pressure sends the speed into the impossibly
: fast to slow range. Is there a way to restore this control to
: usefulness?

Although this isn't a specific fix, I have had success applying it to a few keyers in the past. What you need to do is change the TYPE of pot that controls the keyer. I'm guessing that the little slider is of the linear taper variety, which can become a pain in the tush in a hurry, especially if the speed you want is *right at* the point where it wants to take off. The best solution would be to replace the existing pot with a reverse-log taper; unfortunately, such an animal isn't always readily available. My solution has been to use a "normal" log taper pot, but connect it backwards. This will put your top speed at the bottom of the panel and the slowest at the top, but you'll gain a LOT of control over the 20-30 wpm range. Hope my babbling has been of some assitance.

From: elinskey@crl.com
Message-ID: <307m1g$c27@crl.crl.com>
Source record: 263403

Would someone with a software program for calculating
antenna measurements be kind enough to give me the dimensions for
a yagi (wide spaced or optimum -- doesn't matter) of two or three
elements with a center frequency of 490 Mhz. I'd prefer the equivalent
of plumber's delight if this is available or at least a simple matching
device to avoid expensive coaxial baluns.

Thanks for the help in advance.

CQ Video Wins CINDY Award

[Hicksville, NY] -- Ham Radio Horizons, the CQ video introduction to amateur radio, has been awarded a bronze medal in the Association of Visual Communicators' 1994 CINDY awards competition. The CINDY awards honor outstanding productions in all fields of non-theatrical video programming , including radio, television, cable and non-broadcast categories. Ham Radio Horizons won in the "public service & information" category. The Association of Visual Communicators is a non-profit professional association formed in 1957. This was the 35th annual CINDY competition. ("CINDY" is derived from the award's original name, the CINema industry award.)
Ham Radio Horizons is part of the CQ Video Library, which offers introductory programs on a wide variety of amateur radio activities. It is a basic introduction to the hobby, focusing on the people and activities of ham radio. It was also honored earlier this year as a finalist in the New York Festivals competition and received Honorable Mention in the International Television Association's New Jersey Awards competition.
Ham Radio Horizons was written, produced and directed by Rich Moseson, NW2L, who is also Executive Producer of the CQ Video Library, a division of CQ Communications, Inc., publishers of a variety of radio-related books and magazines, including its flagship, CQ Magazine, Popular Communications and Communications Quarterly. Richard Ross, K2MGA, is President and Publisher.
I'm one of the lucky persons able to watch this video. I would recommend it to anyone to use this video if they are to teach an introduction ham radio class. Guest appearances on this video are, Carole Perry WB2MGP, a teacher in New York who uses ham radio in her classroom, Sam Garret, AA0CR, columnist for Worldradio magazine; former Sen. Barry Goldwater, K7UGA; King Hussein of Jorden, JY1, and many more. This video has helpful hints on what to do before and after one becomes licensed. Also, it gives the average person of an idea of who they will bump into on the air

waves. Their are other topics of this video which is geared toward the young, YL's, Handi-Hams, the retired and much much more. Most importantly, this video shows phone numbers and addresses of various ham radio organizations to contact for more information. The 1994 CINDY Awards were presented in June at the INFOCOMM trade show in Los Angeles.

Special Thanks to Rich Moseson NW2L.

Feedback: Field day Aftermath

From:KB7ZJZ@KB7WE.#WWA.WA.USA.NOAM

Hello, Alex. I just read your Youthnet NEWS 005, and was happy to find it. Pretty good idea. You mentioned Field Day, so I thought I would share my expiriences with Field Day.
This last Field Day was my first ever. I have been a ham for about 9 months and am a General class licencee. I have read about field day and heard about it quite a bit, so when I got the chance to go to one, I was very excited.
I went with the Jefferson County Amateur Radio club, and we operated as a 3A WWA from an old army base, Fort Worden, on top of an old radar sight.
We had a great time putting up antennas on Friday, in preparation for the contest. I learned more about antenna theory and practicible ideas for putting them up in that one afternoon than I have in all my life! It was ham radio at warp speed, and very thrilling. The highlight of that day was when we tried out the antennas, and I got a 599 from Finland on 20 meter CW! I was so excited, it was hard to get to sleep, even after a long day putting up antennas.
The next day, we started right at the first minute of contest, and got out into everywhere! The novice station was pulling them in from the east coast on 10 meters, working on an 80 meter loop, and the QSOs were coming so fast and thick, it was hard to log them quickly enough to keep up! At one point, our operater on 20 meters was up to 66 QSOs per hour on CW, and the novice was going even faster on 10 meter voice. It was so exciting, I went around to all the different operating positions, and tried my hand at most of them. In the evening, things started to slow down a bit, and we were more occupied looking for dupes than anything else. "That's a dupe, old man." was the most commonly heard remark. Things started to get tricky when everyone was so tired, they would forget whos callsign we were using, in the middle of a CQ. Well, I don't know how we made it through the night without doing anything really terrible, but when the sun shot up over the hills, we were still plugging away. I was so tired, I would fall asleep just logging, inbetween QSO's. When the contest finally ended, we were all tired, but very happy. I went home and slept for 13 hours right away, and they tell me I was acting rather strange that night, kept muttering dididididahdah didah......

well, I think Field Day is an EXCELLENT activity, and I wish they had it EVERY MONTH!!!
73 de Randy KB7ZJZ @ KB7WE.#WWA.WA.USA.NOAM

Final Note:
Thank you for reading Youthnet NEWS edition 006. Youthnet NEWS is available via the Internet news groups under Rec.Radio.Info, and Rec.Radio.misc. For more information, or for a news release to be aired, please send me a note to my E-mail or packet address, and include any specific information, and contact information. If you have not yet seen Youthnet NEWS ed. 005, I might be able to explain. The reason Youthnet NEWS 006 is in parts is to keep the packet forwarding system happy. If any message exceeds a certain amount, it will not be forwarded.
Additionally, I need help in passing these bulletins around the world. Unfortunately, that is not possible any more, due to amount of extraordinary and unclear messages sent world wide. I am looking for other hams who may want to receive this bulletin on different continents, so I can forward it to them, and have them forward it to their own area. If you would like to do this for me, please send me a message, and wait for further instructions. DO NOT forward this message via packet with out first notifying me (I do not want any double bulletins to be forwarded at the same time).
Thank you again for reading Youthnet NEWS ed. 006. And I would like to thank you all for your comments and contributions.

Are you certain it's ..--.. and not ..- -.. ? If it's two letters, perhaps
it's a beacon? There is one nearby a local hospital here that sends
some two letter combo (forgotten the letters) that wipes out my AM radio when
I enter the hospital's parking lot.

Also, when you say all TV channels, can you be more specific? Do you really
mean 2-83 or whatever your TV receives?

I'm pretty sure only A3E and J3E voice are allowed on CB. It's 47 CFR
Part 95 if you care to look it up. One-way transmissions are for sure
illegal. You are also (believe it or not) supposed to be quiet for
one minute following 5 straight minutes of contact with another
station.

>one pot smoking stoner. This all occurred within a 1/2 hour period. The
>offenders even gave their call signs. How do you get these people to
>cease, who has legal authority to enforce laws pertaining to these
>things?

The FCC has jurisdiction, but it's not that simple. The profanity issue
is once again wending it's way through the courts. The "community standards"
issue clouds what is free speech and what is obscene. Jamming and music
are clear violations that can be enforced. Code practice isn't yet illegal.
The FCC generally doesn't act unless the violations interfere with important
services, such as aviation or public safety systems, or unless there are
a large number of formal complaints.

The way self policing is *supposed* to work is that each amateur is
supposed to police himself. Self restraint would be a better term
for it. That sometimes breaks down in the case of drunks, sickos,
and the young. In those cases, peer pressure can be brought to bear
on the offenders, either directly, or through the Official Observer
system of the ARRL. Continued abuse can be directed to the Amateur
Auxillary, a group which aids the FCC in monitoring violations.
Ultimately, official action can be taken by the FCC through issuance
of a NAL.

It's the repeater trustee, and his control operators, who are solely
responsible for the content of the repeater's transmissions. They must
act in a timely manner to prevent illegal transmissions by the repeater.
The licensee of each station is responsible for the transmissions of
his station, regardless of the source of the content of the transmission.
The FCC is generally very tolerant of illegal transmissions by a repeater
station because they know that it is not the originating station of most
illegal content, but they can act if the violations continue.

If someone can give me the CFR part number for 11M I'll check to see if the library has a copy and report back on what's legal.

^^

I looked the regulations up at the library and found it would probably need specific interpretation by the FCC. It states that no one-way communications short of emergency, traveler assistance, brief tests, or voice paging were allowed. BUT, if you are sending code practice to a specific station(s) this is NOT one way communications in my opinion and would be allowed since you are communicating a signal with information content to another station(s).

I will contact the FCC and see if they can give me an interpretation on this. I think that with all the other "junk" going on on those frequencies that constructive activities will be encouraged. But then we are dealing with the government, aren't we? ;-)

I'll let you know.

>passing traffic on 80? NTS? RACES? ARES?

Mostly none of the above. It was the bunch of good ole boys who hang
out on 3975 kHz. Few of them are NTS members, fewer still are members
of RACES or ARES (those mainly operated on VHF supplying tactical
comms). The old boys did a pretty good job in between gall bladder
stories. They've all known each other for years, and like most back
fence gossips, they passed along information surprisingly quickly.

(The above is my impression from the snippets I could hear. My HF
antenna is still down due to the fallen tree.)

I didn't equate the Ringo to a wet string. I merely noted that we all
know that less than optimum antennas *can* be used, *even* a wet string.
As inclusion of the ducky indicates, I was saying that inefficient antennas
are often (but not always) acceptable compromises in the amateur service.

>: It just seems odd to me that people, who will spend *thousands* on radio
>: equipment, balk at spending a few extra dollars for a good antenna system.
>: A better antenna is almost always more cost effective than a better radio.
>
>Again agreed. It's really a case, though, of when enough is enough.

The thread was about which antenna is *better*, not which is *enough*.
Likely a J-pole, or even a 1/4-wave made from a SO-239 and a coathanger
would be *enough*, and cheaper than a Ringo. (Arguably *better* too in
many cases) If you're going to buy a commercial antenna, you really
should try to get the most value for your dollar. I don't think the
Ringo fills that bill very well.

876. VE3ONT 1994 EME Schedule

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-16 14:45:56 UTC
From: MOWE@SLUMUS.STLAWU.EDU
Message-ID: <16JUL94.11626910.0013.MUSIC@SLUMUS>
Source record: 263416

VE3ONT TO BE ACTIVE IN 1994 EME CONTEST

Again in 1994, the Toronto VHF Society - VE3ONT, will participate in the ARRL EME Contest using the Institute for Space and Terrestrial Science's 46m (150') Algonquin Park dish (grid square FN05xw). This year's operation will provide an increased opportunity to work 144 MHz stations.

UTC Date VE3ONT TX freq listening range approx. times

Oct 29 432.050 MHz 432.050 - 432.060 0645 - 1815 UTC
Oct 30 1296.050 1296.050 - 1296.060 0754 - 1844
Nov 26 144.100 144.100 - 144.110 0538 - 1645
Nov 27 144.100 144.100 - 144.110 0646 - 1713

Because the Algonquin dish has a 9 degree lower elevation limit, stations with horizon fixed antennas in eastern North America will have a limited chance to work VE3ONT. The following operating hints will improve your chance of making a QSO.

- As in 1993, VE3ONT will work "split" frequency. Do not call on VE3ONT's TX frequency. Pick a random frequency in the listening range. Use the full range; we will be looking for stations in the clear.

- VE3ONT will use circular polarization on all bands. You may use linear or circular polarization to work us. If circular, use RHCP on TX and RX for 144 and 432. On 1296 we will have switchable sense so you may use either the satellite or EME polarization convention.

- Conditions permitting, VE3ONT may start each operating period on SSB to work strong stations as quickly as possible. Please do not call again for a second contact on CW. Conversely, if you work us on CW please do not call again for a SSB QSO.

- All contacts will be "random" with no schedules or sequencing. Please be patient; QRM on our end was intense in 1993.

Low power and OSCAR class stations are encouraged to make an EME contact. 100 watts delivered to a single long yagi should be sufficient on 144 and 432. On 1296, stations were worked with as little as 10 watts and a 2m (6') dish in 1993.

Use of the dish at the Algonquin Space Complex is always subject to last minute preemption for non-Amateur purposes.

QSLs with an SAE to Dennis Mungham VE3ASO, RR 3, Mountain, Ontario, Canada, K0E 1S0. Reception reports are also welcome. Send your log to the ARRL.

For further information contact Peter Shilton VE3VD, (905) 774-8766. Latest developments will be provided at the Central States VHF Conference July 29-30, Memphis, TN, and the International EME Conference, Gottskars, Sweden, August 26-28.

: one pot smoking stoner. This all occurred within a 1/2 hour period. The
: offenders even gave their call signs. How do you get these people to
: cease, who has legal authority to enforce laws pertaining to these
: things?

The answer would lie within the responsibility of one person:
Jim Zoolack(sp?) at the FCC field office in Cerritos.
Yet with the budget contstraits, priorities must be set. Public
safety is top priority, then commercial services. Amatuer service is on
the bottom, viewed as 'wasting' billions in valuable spectrum BY SOME people.
Besides, if the FCC did get rid of it, they'd have nothing to entertain
themselves with. Then you'd have the rif-raf spreading to every other 2
meter repeater. Case in point, the 145.22 CLARA repeater. 147.435 was
shut off for six months by feeble old Mr. Roy Tucker and all the trash
spread to clara's repeater... of course aggravated by clara's own poor
management of delicate problems with a certain user...

view 435 as the "bug lite" of two meters, keeping the undesirables off of
your USABLE two meter repeater.

Peter: Since we all pay federal income tax (and in the case of younger hams, it is their parents who are paying federal taxes), it seems to me that we ARE directly paying for our licenses anyway. If congresspeople truly understand the role that radio amateurs play in providing communications during national emergencies, it would seem to me that they would move quickly to have the FCC clean this mess up. There is some supervisor, or manager, or department director somewhere in the FCC who doesn't realize the dimensions of the this license
backlog problem. I would hate see people give up on amateur radion because they got tired of waiting for the license. I have been waiting about five weeks for my license and don't look forward to waiting another twelve weeks.

About the R7 blown trap problem being a "well-known" problem, I've certainly heard it here several times. I have an R7 that had blown traps (about which more anon), and in dealing with Cushcraft about it, I of course got no admission from the engineer that it was a known problem.

I bought the R7 secondhand, but still under warranty. The symptoms in my case were no resonance on 20, 30, or 40 meters; all the higher frequency bands were OK. It is possible that the traps were either defective from the factory or else were blown because of mistreatment by the person I bought it from. He was trying to use it inside a mobile home laying horizontally and without the counterpoise. He was only using 100 Watts. The Cushcraft engineer thought that sort of mistreatment might blow out the matching network, and might possibly blow traps, but that seemed less likely. In this case, the matching network appeared to be OK. So, even though there was some doubt about whether the traps were defective from the start, Cushcraft replaced the 20 and 30 meter traps under warranty.

I certainly cannot see how the traps can get blown, unless you use a lot of power and take no care whatever to tune the antenna correctly. When you realize how those traps are constructed, it's hard to imagine a failure mechanism that could occur with 100 watts.

In my case, the symptom of blown traps was high SWR in the corresponding Ham band, and resonance far removed from any amateur band (12 Mhz, as I recall). Replacing the 20 and 30 meter traps fixed the problem, and I've had no complaints since. I think it's a very good antenna, and I think Cushcraft acted admirably in replacing the traps even when it wasn't clear that they were at fault.

> : things?

Please allow me to add my $.02 here. There are many who will disagree with about anything that anyone posts anywhere just for the sake of disagreement and it is not to those that this post is written...

Firstly, we probably need to get it out of our heads that any type of enforcement must occur on the spur of the moment where ham radio is concerned. Yeah, there are those who will jump right in and yell at the offender only to begin a shouting match with the "enforcer" becoming enraged and engaging in the same activities the offender is being accused of. It don't work this way! [Grammar error intentional] &-D

To the untrained there is no need to try to act as some type of mediator or enforcement agency unless the parties committing the violations are well known by this person. And then, this person's actions should not take place on the air. If the violators are unknown, probably the best thing to do would be to contact an Official Observer (OO) or someone from the Amateur Auxiliary.

Although neither of these groups has enforcement authority, they DO have enforcement credibility. This means that the FCC will listen to their complaints/reports [the decision to contact the FCC Field Operations Bureau would never be made by an OO to begin with and only extreme cases would be brought to the attention of the FCC under the guidance of FCC personnel in strict accordance with the established referral policy of the Amateur Auxiliary] before even beginning to consider a report from Joe HamRadio Operator off the street. Many times Joe HamRadioOperator off the street calls the FCC just because it makes him feel important and because he and the perpetrator have had an argument and this is Joe's way of getting even. I'm sure this is one of the main reasons the Amateur Auxiliary was founded.

Being involved with a "self-policing" activity, as we are, does not mean that we have to become a SWAT team and pounce on someone the moment they commit an infraction. Part of the "Basis and Purpose" of amateur radio (Para 97.1(d) states: "Expansion of the existing reservoir within the amateur radio service of trained operators, technicians, and electronic experts." To me this

includes the idea that only trained operators should become involved in any "enforcement" process. If you want to become involved and to become an Official Observer or a member of the Amateur Auxiliary, talk to your ARRL section manager. That's a good start. Those who absolutely abhor the ARRL and anything involving the ARRL and who think they can take matters into their own hands....only become a part of the problem.

Bottom line: If you are not or have not been trained as an Official Observer or as a member of the Amateur Auxiliary I would recommend that your involvement only be that of contacting and reporting the problems to those who are trained, and let them handle it. Let them be the ones to contact the FCC in any event, as they wouldn't take that action unless it was absolutely necessary.

Oh, I do not currently belong to the League but I do support many of their activities.

True. The only problem is that anyone looking for it by that name
probably won't find it. The latest version I have is dated in
February of this year and it is called SM410.ZIP on the BBS I frequent.
Older versions also went by the SMnnn name with the numerals
indicating the version. The one I have is version 4.10. This
program is highly recommended for learning the code. It can send CW
from any ASCII file on the PC through the speaker at your chosen speed.

It uses the approved method of sending the individual characters at
a high speed (approx. 20 wpm) and varies the sending rate by
varying the space between characters. Thus, 5 wpm has characters
sounding exactly the same as they sound at 20 wpm, the rate of
the characters being sent much more slowly.

Paul S. George (psgeorge@infinet.com) wrote:
: Could anyone tell me what kind of symptoms you would see with a "blown"
: trap?

Why do you think you have a blown trap? Is there some physical evidence
that you can see?

I have one that is acting a little strange right now (basically,
: a lack of reception across the bands... the radio is fine).

Lack of reception could come from any point after the rig. The usual
problem is a short from braid to centre on the coax. To test to the base
of the antenna, remove the coax pl259 from the base of the antenna and
put a dummy load there. Try to load that. Better still is a watt meter
with dummy load put at the same place. Note that the reading is
"reasonable (there should be little loss in a coax at 3 MHz and a bit
more at 28, but if you see lots of loss you have a problem.

What do you mean by lack of reception? A blown trap would screw up the
loading of the antenna, but you should still hear something on most bands.

I put an
: ohm meter across the coax feed line from the antennae (disconnected from
: the radio, of course) and it appears to be a short. I wouldn't have
: thought that it should look like this.

This is normal. The R7 is an electrical half-wave antenna. As such, it
exhibits a very high impedance at the base. Your rig and coax match 50
ohms. So, the antenna designer (a friend of a friend of mine) put a box
at the base with two torroids inside. This is a network to change the
impedance of the antenna to something that the ric gan handle - abt 50
ohms. This matching network appears as a DC short (ie DC, not RF at the
freqs the antenna works on). This makes the R7 (and the sister R5) a
"grounded" antenna. This is what gives the "short" with your VOM.

However, I'm not sure what the
: traps will do. I thought that they were supposed to "trap" electrically
: the length of the antennae at the given frequencies.

Yes, that is correct. The traps are resonant circuits composed of a coil
of wire (under the black heat-shrink) and a capacitor (those funny little
tubes on the side of the radiator). This is a parallel resonant circuit
(aka "trap"). The antenna uses the bottom portion of the antenna on the
highest band, the bottom portion plus the part between the first two traps
(both part of TV1 since there is so little difference between 10 and 12
meters). And so no, up the antenna/down the bands.

With an ohm meter
: which uses a DC voltage, would the antennae appear as a short to ground?

As I said above, Yes.

So, what can go wrong with an R7 (or R5)? Well, if you took a lightning hit, you would see parts of the antenna here and there. The black box is usually the first to go. BUT, you do not have to get a direct hit to blow that box! if the lightning passes near the antenna, it can "ring" the antenna on its various resonant frequencies. This ringing can look to the antenna as if a BIG transmitter were supplying RF!

What happens is damage to the matching network (sometimes the whole thing gets blown to smithereens) And, the coils on the traps can vaporize. Also, arcing from the centre to the ouside of the capacitors can blow a hole or caarbon track the dilectric (the capacitors are mad e of a rod covered with insulaton over which ther is a tube. The traps are tuned at the factory to resonance by adjusting the amount of overlap between the rod and the tube). PS, don't screw with these as you will never get them right). In extreme cases, the arc can blow a hole in the tube (looks like a bullet went from the inside of the tube to the outside, usually towards the main antenna tubeing). Yes, I have had experience with damage due tolightning on these antennas 8-(

So, you did not mention any physical damage to the antenna due to lightning. You could have damaged it if you put too much RF into it esp key-down like on rtty (do you have a mexican kilowat amp?). That sort of damage might not show up outside the matching box.

So, bottom line . . .
First, put the dummy load/wattmeter on the end of the feeder in place of the antenna. If i were a betting man, I'd go for a sizeable wager in this one).

If the feeder is OK (RF gets through and/or the rig loads normally into the dummy but not the antenna), then take the four screws off the matching box at the base of the R&. You should see two torroids and a couple of other bits (all nice and clean). Look for a failure of the RFC (looks like a big resistor) or a broken wire. at any point. There should be no scortching anywhere.

: THanks for any information!

You are entirely welcome. Next time you are in Singapore you buy the beer.

Propagation Forecast Bulletin 28 ARLP028
From Tad Cook, KT7H
Seattle, WA July 16, 1994
To all radio amateurs

SB PROP ARL ARLP028
ARLP028 Propagation de KT7H

The sunspot count was up a bit last week, but the solar flux was about the same as the week before. The sunspot number is based on the total area and number of spots visible on the solar surface from earth. More sunspots of larger areas generally produce more of the sort of radiation that makes the ionosphere reflective.

Solar flux is energy from the Sun measured here on Earth at 10.7 cm wavelength, or 2.8 GHz. It correlates fairly closely to the charged particles reaching the ionosphere that reflect radio waves.

Geomagnetic disturbances were down last week, with a falling A index in the single digits. But on Thursday, the day this bulletin was written, the K indices began to rise to four. More active levels are forecast for the next couple of days due to a recurring coronal hole, an area on the Sun that generates disturbances here on Earth. Another period of upset is forecast for July 23 to 28.

Solar flux is expected to stay in the eighties through the rest of the month. Broad peaks around 90 may appear centered around July 19 and August 6.

Sunspot Numbers from July 7 through 13 were 90, 82, 72, 92, 102, 84 and 81, with a mean of 86.1. 10.7 cm flux was 88.1, 85.8, 85.9, 86, 85.6, 82.9 and 81.4, with a mean of 85.1.

The path projection for this weekend is from Cleveland, Ohio to Congo.

80 meters should open from 0030 to 0515z, peaking around 0200. 40 meters should be good from 2330 to 0530, and 30 meters from 2230 to 0600. Check 20 meters from 2100 to 0230, and on some days 17 meters may be open from 0000 to 0200. 15 meters and above do not look good at this time, but on rare occasions 15 meters may open up after

sundown on the Cleveland end of the path.

RACESBUL.334 MGT - Policy: FEMA & the RACES 1/2
RELEASE DATE: July 11, 1994

Question: Doesn't FEMA Run the RACES?

Response: FEMA has certain responsibilities, but "running" RACES (in the sense of control) is not included. The RACES is a LOCAL or STATE governments emergency communications reserve, sponsored and controlled by that government which sets up the unit. FEMA has NO jurisdiction or authority over the local or state government, including that of its RACES, except in the area of matching funds. In the past FEMA did provide a "Guide" to assist local governments in establishing the RACES. The operative word is "guide".

Statements that "FEMA sponsors RACES" or words to that effect have appeared in several publications. Unfortunately some interpret that to mean that it "runs" the RACES program. It does not. The RACES unit is sponsored by the local or state government with a civil defense council that adopts a RACES plan, appoints a Radio Officer and establishes a RACES unit. To sponsor is to control. FEMA does NOT control the RACES. The RACES is AUTHORIZED by the federal government for use by the local or state government to be controlled by local or state government. No federal sponsorship is required. Only the government which adopts a RACES program is responsible for that unit. It takes NO action by FEMA to allow, permit, support or make possible the RACES unit. Local or state government can utilize it without any assistance, direction or "sponsorship" by FEMA unless they seek matching funds, in which case certain requirements may apply.

The RACES provisions in the FCC regulations do not preclude the Amateur Service from other forms of Public Safety Communications. Local government could achieve the same result by establishing a public safety emergency communications reserve and calling it

something other than "RACES". However, the essential difference between such a program and RACES would be two fold: (1) it could not be used in a Presidential Declaration of certain National Emergencies and (2) FEMA would not assist with funding as it now does with the RACES program when adopted and approved plans are filed with the State and FEMA.
Continued, part 2.

RACESBUL.335 MGT - Policy : FEMA & the RACES 2/2
RELEASE DATE: July 18, 1994

Question: Does FEMA activate RACES ?

Response: NO. Statements to that effect are incorrect.

First, there is no Federal RACES.

Second, The agency that activates RACES is the one that sponsors (or has) the RACES unit: i.e., the county, city or state. NO action of FEMA, or of State OES, is required to activate the RACES unit of a jurisdiction (i.e., County, City) that has need of its abilities in support of its communications. Even in Hurricane Andrew and the Northridge quake (both major disasters) FEMA had to wait for a request from the State before it could go in to do anything. That's part of the legal separation of government in the U.S.

A RACES unit is a part of the government jurisdiction that it serves. It provides PUBLIC SAFETY communications and related duties for that specific local or state government [or to other governments that request mutual aid from them under a Mutual Aid plan.]

The RACES (or equivalent emergency communications unit) function is to establish and support command, liaison and communications circuits for the Public Safety requirements of THAT government. Hence its utilization can be sparse: (1) if the local government EMA people haven't grasped the programs full capability; (2) if other Public Safety circuits are intact; (3) if the support needed is administrative, rather than that of operators (as most Amateurs have yet to realize how to be of aid without operating a

radio.) As more RACES participants realize just how they can become "part of government" in mental concept as well as in practicality (as unpaid staff) the more that government begins to rely on them and turn to them the very first thing in any escalating event, no matter how small. When that happens, the hassle over "activation" becomes moot.
[end of 2 part series by Cary Mangum, LLB., JD., W6WWW, Chief State Radio Officer.]

RACES Bulletins are archived on the Internet at ucsd.edu in hamradio/races or in hamradio/packet/tcpip/incoming and can be retrieved using FTP. The opinions stated are those of the author of the bulletin and not the poster.

NOTE: The Effective Sunspot Number for 15 JUL 94 was 35.0.
The Full Kp Indices for 15 JUL 94 are: 4+ 3o 3- 2+ 3- 3- 3- 4+
The 3-Hr Ap Indices for 15 JUL 94 are: 32 16 14 10 13 13 12 34
Greater than 2 MeV Electron Fluence for 16 JUL is: 3.0E+08

SYNOPSIS OF ACTIVITY

Solar activity was low. An optically uncorrelated C1
flare at 0304Z was today's only C-class event. Frequent B-class
subflares occurred. A new Region 7757 (N13E75) rotated into
view today as a CSO spot group.

Solar activity forecast: solar activity is expected to be
very low to low.

The geomagnetic field ranged from unsettled to minor storm
levels. Active to minor storm levels dominated from the

beginning of the period through 1500Z. Conditions subsided to mostly unsettled thereafter. The disturbance seems likely to have been caused by a favorably positioned coronal hole.

Geophysical activity forecast: the geomagnetic field is expected to be unsettled to active for the next 24 hours as the current disturbance continues. Local nighttime hours are expected to be subject to isolated substorms. Conditions should decline to mostly unsettled levels for the second and third days.

Event probabilities 17 jul-19 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 17 jul-19 jul

A. Middle Latitudes
Active 25/10/10
Minor Storm 10/05/05
Major-Severe Storm 10/01/01

B. High Latitudes
Active 30/10/10
Minor Storm 15/05/05
Major-Severe Storm 10/01/01

HF propagation conditions were below-normal over the high and polar latitude paths, particularly on transauroral circuits. Levels of geomagnetic and auroral activity should begin subsiding over the next day or two, which should bring high latitude propagation conditions back to near-normal levels. All other regions should see near-normal propagation.

NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

898. SAREX Update 7/17 at 7:30 UTC

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-17 08:14:11 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940717041411.26605855@STDVAX.GSFC.NASA.GOV>
Source record: 263246

SB SAREX @ AMSAT $STS-65.012
SAREX Update 7//17 at 7:30 UTC

Greenbelt, MD July 17, 1994 at 7:30 UTC

SAREX Schools

The school group contacts with the Space Shuttle Columbia crew are nearly complete. Twelve of the thirteen schools planned for this mission have had successful contacts. The Bair Middle School in Sunrise, Florida initiated the school group contact parade on Saturday July 9. 22 students communicated with mission commander Bob Cabana, KC5HBV. Commander Cabana has been at the mike for most of the school contacts for this flight. He has told the students to "Study hard, especially in science and math" and to "not give up." He stated further that: "I was not selected to be an astronaut on my first try, but I kept trying and that is why I am here today...so keep trying!."

In addition to the Bair School, Commander Cabana also communicated with the Sacred Hearts Academy in Honolulu, Hawaii on July 10, the Fronhofer Realschule in Ingolstadt, Germany and the Richland Elementary in Ft. Worth Texas on Monday July 11 and the Our Lady Queen of Heaven school on Tuesday July 12. KC5HBV was also at the mike during the South Seminole Middle School contact in Casselberry Florida and the Washington Elementary School District contact in Phoenix, Arizona on Wednesday July 13. On Wednesday July 14, Bob Cabana had a 3.5-4 minute chat with the students at Brentwood School in Sandersville, Georgia and the students at the West Oak High School in Westminster, South Carolina. During the West Oak contact, AM radio station WGOG broadcast the SAREX contact live. It was estimated that 10,000 people listened to this live broadcast. On Saturday July 16, the students at the Granite Mountain Middle School in Prescott, Arizona had a very early morning (5:53 am) contact with Commander Cabana. 13 students asked their questions during their pass through a SAREX telebridge in Corpus Christi, Texas. On the morning of July 15, pilot Jim Halsell answered 8 questions from an excited school group at the West Monroe High School in West Monroe, Louisiana. At the conclusion of the contact, West Monroe contact coordinator Mark Ketchell commented that as a result of the SAREX contact it looks like there may be a new amateur radio club

forming at the school. Many of the school group contacts, including the West Monroe High School, have been transmitted live via WA3NAN.

Japanese payload specialist Chiaki Mukai "Phoned Home" through SAREX on Wednesday July 13 by talking to a youth group in Japan. Despite it being a 2:03 in the morning, ten students at the Tatebayashi Children's Science Exploratorium in Gunma, Japan communicated with Dr. Mukai through the SAREX radio. All that witnessed this contact could sense the emotionally filled replies from Dr. Mukai as she answered her homeland student's questions in Japanese. When one of the students asked about the shuttle food, Dr. Mukai proudly mentioned that the STS-65 crew had a Japanese dinner the night before. The contact was shown throughout the Exploratorium on closed circuit TV. Sixty people, all Japanese media, crowded in the room where the students made contact with Dr. Mukai. This contact was covered by all the major Japanese television stations and several radio stations and newspapers. From all accounts, this contact appears to be the most comprehensive coverage given to SAREX. The SAREX Working group will share more information as we receive it.

Most of the above school groups were completed using AMSAT's telebridge system. The telebridge system is an international network of seasoned satellite ground stations that relay the communications of the astronauts from their station to the school through a phone bridge. Darome Telecommunications in Chicago donates their services to SAREX for these events. Bob Douglas, W5GEL, and Bob Diersing, N5AHD, in Texas and Dick Flagg, WH6CHU and his team in Hawaii were the SAREX team's primary telebridge ground stations for this mission.

Future SAREX operations

With nearly all the school group contacts complete, two school group backup passes have been cleared for possible general QSO opportunities. While we cannot guarantee availability, there is a high probability that the STS-65 crew will have the SAREX radio (packet or voice) operational over the continental U.S. on these passes. These opportunities include a pass on orbit 141 at MET 8 days 18 hours 45 minutes (7/17 at 11:28 UTC) and a pass that occurs around MET 9 days 18 hours 48 minutes (7/18 at 11:31 UTC). The SAREX downlink frequency is 145.55 MHz. Voice uplinks are 144.91, 144.93, 144.95, 144.97 and 144.99 (except Europe). For European hams, the voice uplinks are 144.80, 144.75 and 144.70. STS-65 voice callsigns are KC5HBV (Bob Cabana) and KC5FVF (Don Thomas). The worldwide packet uplink frequency is 144.49. The packet radio callsign is

W5RRR-1. Please note that the attitude of the shuttle orbiter provides a clear path for SAREX operations during the last half of the 8 minute period when the shuttle is above your horizon. Our school group contacts were averaging 3.5-4 minute contacts. So don't give up after the first couple of minutes after the scheduled AOS. Good Luck!!

Submitted by Frank H. Bauer, KA3HDO for the SAREX Working Group

SB SAREX @ AMSAT $STS-65.014
STS-65 Central R/S Times 07/17

Below are the rise and set times for STS-65 for selected US cities
over the next two days. This data was generated to help hams without
orbit programs to participate in the SAREX activities. Please note that
the times shown are UTC and NOT LOCAL TIME. This listing includes only
those passes with an elevation greater than 5 degrees. For information
regarding SAREX frequencies and operations procedures, check your
local PBBS, or bulletins from W1AW, W5RRR, W6VIO or WA3NAN.

Symbol key: rise = time that shuttle appears above horizon
tca = time of closest approach to observer
set = time that shuttle disappears below horizon
el = maximium elevation above horizon
geo = geometry: A = Ascending orbit, moving south to north
D = Descending orbit, moving north to south
E = passes east of observer
W = passes west of observer

900. Jupiter Radio Pulses

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-17 09:08:50 UTC
From: jeffrey@kahuna.tmc.edu
Message-ID: <Ct2uqq.M6x@news.Hawaii.Edu>
Source record: 263241

Just yanked this off the press wire.

Jeff NH6IL
****

From: Reuters News
Distribution: reuters subscribers
Subject: Jupiter Radio Pulse Increases before Collisions
Keywords: urgent
ANPA: Wc: 469/0; Id: a0247; Src: reut; Sel: reute; Adate: 07-16-N/A; Ver: 0/1

TOKYO (Reuter) - As the world gears up to watch fragments of
comet Shoemaker-Levy 9 crash into Jupiter Sunday, Japanese
astronomers have detected a 10-fold increase in radio pulse
emissions from the giant planet, NHK television said on
Saturday.
NHK said the team of astronomers led by Tohoku University
professor Hiroshi Oya caught the sudden increase in Jupiter's
radio pulse between 7 and 8 p.m. (local) Thursday.
Oya's team said the string of 21 large comet fragments that
make up Shoemaker-Levy 9 closing in on the planet might have
caused the formation of dense, high-temperature plasma clouds
which triggered the massive radio pulse outflow.
Using four antennae in northern Japan, Oya's team has been
studying Jupiter's radio pulse since 1974.

>

I agree with your reasoning Paul
We pay for every thing hear in the uk
My licence is still a month out of date before I get the renewal
Since the government put every thing out to tender, we have to pay so that
all the firms can make huge profits out of us.

903. SAREX Keps 7/17

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-17 13:53:36 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940717095336.26606669@STDVAX.GSFC.NASA.GOV>
Source record: 263249

SB SAREX @ AMSAT $STS-65.017
SAREX Keps 7/17 at 13:50 UTC

Greenbelt, MD 7/17 at 13:50 UTC

At this time, the official SAREX Orbital element set for the STS-65 Space Shuttle mission is set GSFC-027a with the NORAD drag values corrected by Gil Carman, WA5NOM. This set was generated by Ron Parise, WA4SIR at the Goddard Space Flight Center. On orbit 140, predictions with this set were 2 seconds later than GSFC-025a and one second earlier than GSFC-023a. Predictions with set GSFC-021 are now 33 seconds too late because it had the Norad drag values.

Well, this isn't the way its supposed to be done, but what's worked
here is to tape it right off the air and also log/document it in writing.

Send copies to the repeater trustees and offenders, with a letter of
protest, indicating copies can and will be furnished to the FCC.
Enclose actual copies of the pertinent FCC regulations involved. Be
courteous, but firm.

Aside from stating regs were violated, and the FCC is into large fines
these days, you might make the point that non hams are listening and
this gives the hobby and service a bad name, and may lead to the
eventual loss of more of our bands.

In short, you have to do all the homework, and show it.

I'd hate to say you should send this anonymously, to avoid harrassment,
but that what some have done, and its had an effect when done properly.

Even this hobby has its foolish and immature participants. At least the
spirit of courteous self enforcement continues to exist, although I'm no
fan of some of the armchair lawyers I have encountered in these matters.

Sounds like you tuned in to the 147.435 repeater. I have been
wondering how to get some FCC police action on that one myself.
The people on that repeater are the slime of the earth. They are
certainly a disgrace to the amateur world. I would love to see
their licenses yanked, their radio equipment confiscated, and large
fines levied against these animals! So how do we do this?

The answer might be outsourcing the license processing to a provite
company. Get it out from under folks who have no reason to think or do
a good job.

I have also had my R7 for quite some time and have had no problems with trap failures. Additionally, I have worked quite a large number of hams using the R7 and none have reported trap failures. I am quite pleased with it and the performance is wonderful. I would not hesitate to recommend it to an aspiring ham.

Nope. Your ticket won't look any different. What you need to do is
hang on to
your copy of the CSCE (Certificate of Successful Completion of
Examination) which
shows that you completed the code test. That form is what proves the
difference
between a no-code tech license and your tech+.

STS-65 SAREX MISSION CONTINUES

HR AMSAT NEWS SERVICE BULLETIN 197.02 FROM AMSAT HQ
SILVER SPRING, MD JULY 16, 1994
TO ALL RADIO AMATEURS BT
BID: $ANS-197.02

STS-65 SAREX Mission Continues

The STS-65 SAREX missions continues smoothly. The packet radio ROBOT is working perfectly and many stations are connecting and receiving their "confirming" QSO number. All radio amateurs are invited to try their hand at making a voice/packet contact with the astronauts aboard STS-65.

Monitor the WA3NAN Shuttle re-broadcast frequencies and daily ARRL bulletins to pick up the latest element sets. The following are the frequencies for the re-broadcasts:

Goddard Amateur Radio Club, WA3NAN, Greenbelt Maryland, SAREX Bulletins and Shuttle Retransmissions 3860 KHz, 7185 KHz, 14,295 KHz, 21,395 KHz, 28,650 KHz and 147.45 MHz (FM)

ARRL Amateur Radio Station, W1AW, Newington, CT SAREX News Bulletins 3990, 7290, 14,290, 18,160, 21,390, and 28,590 KHz and 147.555 MHz (FM)

Also, bulletins available on INTERNET, via AMSAT News Service (ANS)
bulletins, Compuserve, and many of our local Packet Radio BSS.

The following is a summary of the frequencies that the Shuttle astronauts
will use during SAREX operations:

All operations in split mode. Do not transmit on the downlink frequency.

Voice Freqs: Downlink: 145.55 MHz (Worldwide)
Uplinks : 144.91, 144.93, 144.95, 144.97, 144.99 MHz (Except
Europe)
144.70, 144.75, 144.80 MHz (Europe only)

Packet Freqs: Downlink: 145.55 MHz
Uplink : 144.49 MHz

Note: The crew will not favor any specific uplink frequency, so your
ability to work the crew will be the "luck of the draw."

The following is the latest keplerian element set for STS-65:

STS-65

>difficulty, then they bungled, not the FCC. If the ARRL opposed license fees
>(which I understand they did), then they bungled. No one is doing me a service
>by saving me 10 bucks and making me wait 17 weeks.
>....

NO! NO! NO!

Fees for Amateur Radio licenses are a very bad idea. We get use of the
frequencies and licenses at no charge because we provide a public service.

(snip!)

Look at it this way. The FCC apparently has one person fulltime
providing license processing. There are probably tens of thousands of
government employees working fulltime providing communications services
that work less well than the amateur radio service. If ten more FCC
employees were devoted to license processing, that would break the
backlog almost immediately. If a few dozen more FCC employees were
dedicated to hunting down bootleggers, and handing out $10,000 fines,
that would help a lot. (Bootlegger hunting could probably be made to
pay for itself if Congress would allow it to do so.) At a total
additional cost of less than 1 more FCC person per state, great
improvement to emergency communications could be attained.
--
Mickey McInnis - mcinnis@austin.ibm.com (mcinnis@vnet.ibm.com outside IBM)
--

Hmm...that gives me an idea. Someone (yeah, I know) posted a statement saying
that the FCC could not accept the services of volunteers to do the necessary
data entry. I wonder, however, if there is any such restriction on accepting
help from *other government agencies*. For the cost of a plane ticket and
a few days per diem cost, I (or any other Executive Branch employee) could go
help them out -- assuming I could get the time off here, of course :-). Maybe
a quick grep on the Elmer list would turn up a few names coming from .gov or
.mil sites....

Ummm, not quite. Y'all also have to know the numerals, some
punctuations and a couple of pro-signs before Gettysberg will
fork over the license (after 17(!) weeks :-).

Excerpts from netnews.rec.radio.amateur.misc: 17-Jul-94 Packet Radio Information by Jason C. Sokolosky@acs.u
> I am looking for information on Packet Radio. Does anyone know
> where I can find some??

I think I know a few written sources. I don't know if you have Radio Shack there, but the Summer 1994 (current) issue of Radio Shack's "Radio!" magazine has an article titled "Packet Radio--Beginner's Guide." That magazine sells for $1.95 here. It's available at all Radio Shack stores.

Also, Tucker Electronics has several packet radio books in their radio/computer catalog. Here is the information about them:

NAME PRICE ORDER NUMBER
Your Gateway to Packet Radio $12 ARL 2030 PAC
Your Packet Companion $8 ARL 3959
The Packet Radio Operators Handbook $17.95 MHJ 3036

If you like, you can order these from Tucker by calling 1-800-527-4642.

I think this is the best I can do. I hope I've been able to help.

925. Motorola MX360 Programming Help Please!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-17 23:17:21 UTC
From: dplumb@cix.compulink.co.uk
Message-ID: <memo.679778@cix.compulink.co.uk>
Source record: 263266

I have recently acquired a Motorola MX360 txcvr on VHF high, 165/170Mhz.

The full type number is "MX300-S/VHF". The model number is "MAH43SSUP9540AN".

There is a small label inside with the channels programmed (1,2,4,8,9), and some details of selective calling fitted.

On taking the metal front off, there is a 7 way connector visible, which connects to a daugherboard with a large Motorola IC ZX82140CP (not shown in my issue of IC Master). On another daughterboard board below this, there is an IC MCM2802, which is in the IC Master, and is an EEPROM.

I would appreciate any information on the radio really, I'm totally in the dark at the moment, but especially if anyone knows how to easily reprogram the channels!

SB DX @ ALLBBS $OPDX.167
Ohio/Penn DX Bulletin No. 167

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 167
BID: $OPDX.167
July 18, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, DF4RD, DL7VEE & DXNL, JH4RHF, PA3ERC, VE3UOL, AD1C, KC1AG, BV5AF, K4CEF & Southeastern Cluster Group, N4ZC, WD4R, KC7V, AD8V, KB8RJ, KD8JN and KG9N for the following DX information.

0S, PRINCIPALITY OF SEBORGA. Stations 0S1A and 0S1B still contune to be active, mainly on 20 meters, CW, SSB and at various times. Remember! WORK FIRST WORRY LATER! (WFWL) The following information was relayed to OPDX from the Southeastern Cluster Group:
Paulo, I2UIY, who just completed the 1A0KM operation, says the 0S1A/0S1B was operating on "bogus credentials". It seems this "Principality of Seborga" is something on the order of New Orlean's Mardi Gras. Each year this town of Seborga has a parade and names a "PRINCE" for the celebration. The "PRINCE" sold the license to the father/son Italian duo. Paulo states an investigation is underway by the Italian FCC because of the unauthorized transmissions using an illegel callsign.

9A, CROATIA. Jacky, F2CW, who left Pakistan in December, has been working for the Red Cross in Croatia the past 6 months. Jacky has been somewhat active as 9A/F2CW, but expects to receive the callsign 9A5CW shortly. He also holds the call T9/F2CW (Bosnia-Heregovina) but has not activated it yet. His activity has been mainly on CW with very little SSB operations. Jacky will try to be active also on RTTY, Pactor and AMTOR. QSL 9A/F2CW, 9A5CW and T9/F2CW to KC7V.

BO0M, MAZU ISLANDS, TAIWAN (ROC). In a news release from the CTARL: A group will activate BO0M from Mazu Islands, July 21-31st. The frequencies for SSB are 7060, 14260, 21260 and 28460 kHz. There will also be some CW and satellite activity. The location of the islands are: 26.158 North and 119.778 East. Here is the huge list of operators: BV5AF (leader of DXpedition), BV2AD, BV2AP, BV2CB, BV2DD, BV2HH, BV2KI, BV2OL, BV2QB, BV2RD, BV2TA, BV2WC, BV4AS, BV4BN, BV4IK, BV7FC, and JP1RIW. QSL via

BV2KI, P.O. Box 84-609, Taipei 100, Taiwan, ROC.

C6, BAHAMAS. Chuck, KG9N, will be active from the Little Bahamas Bank Group on the island of Abaco (NA-080) as KG9N/C6A, August 3-9th. He plans to be active in the North American QSO Party (1800z Aug. 6th to 0600z Aug. 7th). With a R7 vertical (and maybe a long for 40/80 meters), Chuck will be operating mainly on CW (up 25 kHz from edge), but will be on SSB on 14195 kHz around 0300z daily. There may be some 6 meter activity, if Chuck can find a rig.

GM0, ISLE OF MULL (EU-008), SCOTLAND. Jack, KB8RJ, will be active from this Inner Hebredes Group as GM0/KB8RJ, August 8-20th. Activity will be SSB only on 14260, 21260, 28460 and 7 MHz if conditions permit. There is a possible chance for other Scottish Isles to be active if time permits one week before/after. QSL to CBA.

HB0, LIECHTENSTEIN. Members of the Contestgroup Oude Maas (PI4COM) will be signing HB0/PA3ERC from Malbun, Liechtenstein, July 17-24th. Operators PA3ERC, PA3BBP, PA3EWP and PA3GBQ will active on 160-10 meters, including the WARC bands, CW, SSB and RTTY. QSL via PA3ERC.

HL, SOUTH KOREA. Del, HL9DC, an American from Ohio, is active from Wonju, South Korea. His length of stay is unknown at this time, but he likes working stateside stations. He was heard recently 14025 kHz around 1200z. Also check the bottom edge of 7 MHz between 1100-1200z. QSL via N7RO.

P4, ARUBA. Hiro/JR4PMX, Jun/JH4RHF and his wife Kumiko/JR4DUW will be active for one week on Aruba starting August 24th. Jun's call will be P40S, Kumiko's will be P40YL and Hiro's was not available at this time. Activity will be on 160-10 meters, CW, SSB and RTTY. QSL to their callbook address (CBA).

SPECIAL EVENT STATION. The Canton Amateur Radio Club will operate "W8AL" to celebrate the "Pro Football Hall of Fame Greatest Weekend", July 25th through July 31st from 1400 to 0200z. QSL and certificate will be available for contacts. Operation will be on:
SSB - 3870, 7270, 14270, 18150, 21350, 24950 and 28350 kHz
CW - 3700, 7125, 10120, 14050, 18080, 21125, 24910 and 28125 kHz

There will also be RTTY, Packet, AMTOR, satellite, 2 & 6 meter FM/SSB. For an unfolded certificate, send your QSL with "contact number" and a 9 x 12 SASE, with two units of first-class postage. For a QSL or a folded certificate, send your QSL with "contact number" and an envelope (#10 business size) SASE to Randy Phelps, KD8JN, 1226 Delverne Ave, SW, Canton, Ohio 44710-1306. SWL's are Welcome!

SU, EGYPT. Ayman, SU1AY, was heard in Cairo, on the 14226 DX net around 0000z. QSL via OE6EEG.

ZD8LII QSL MANAGER. Ed, AD8V, states he has been receiving cards for QSL requests for ZD8LII from time to time, but he is NOT or has NEVER acted as his QSL Manager. QSL ZD8LII to G0LII.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

>get a "UL" (VCO unlocked) on the display.

I have the ten meter version, and had this problem continually--forever resetting the microprocessor. My experience, however, was not losing lock while the rig was on, but rather at power-on. I haven't gone to nearly the trouble you have to track down the problem, but it may be a more congenital problem in this series than I had thought.

931. Need help with equip suggestons

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 03:18:13 UTC
From: dbarton@cc.emory.edu
Message-ID: <30cs9l$bql@emoryu1.cc.emory.edu>
Source record: 263276

Greetings! I am soon to be a new ham (I have been studying diligently and realize that "soon" is a relative term in regards to the current delay with the FCC) and I have several questions in regard to what equipment to buy or not to buy.

First let me say that if this is the wrong group I apologize. I searched pretty thoroughly, but my site does not get all of the groups. Second, I have some pretty unusual circumstances, so a brief description is necessary.

I live in San Diego, and am purchasing a radio so that I will be able to communicate with my Father who will be on a boat in the South Atlantic for about a year. He is not a Ham, but he will have a Marine SSB radio which operates in the HF frequencies. The radio I purchase must be a Marine radio, licensed as a shore station in order for he and I to have a two-way conversation. (His radio picks up 0.5-30MHz, but I quickly discovered that "cross-banding" is a bozo no-no.) I have always been interested in Ham radio, so if I am going to go to all of the expense of setting the thing up I want to be able to use the Ham capabilities too.

After careful study I have decided on the SGC SG-2000. This radio is type accepted for Ham use, and all of the Marine radio people I have talked to say that it is top of the line. My questions are as follows:

1. Does anyone have direct experience with this radio, or SGC in general?
2. What are the features I should look for on a first class Ham rig?
3. My father will have the capability to Rx and maybe Tx fax and/or RTTY. What is the cheapest and/or easiest (I realize that the two are not nec. the same) way for me to add packet, RTTY, etc.? I am also purchasing a computer, and I am curious about the "Internal" vs. "External" TNC's. What are the advantages/disadvantages?
4. I am also interested in v/uhf equipment. I hear that the Kenwood 79 is the best, but my budget will probably require starting with something used, any suggestions?

If you have read this far, I am already very grateful. Any suggestions you have in the above (or any other) areas would be greatly appreciated. The best way to get me the info would be to E-mail it to me since I will probably not get back to check this group in time to read a response here. My address is: dbarton@unix.cc.emory.edu

Also, any information from locals (San Diego County) about clubs, repeaters, classes, etc. would be appreciated.

Once again many thanks, and I look forward to hearing from you.

Doug
:-)

933. WEFAX from PYE TELECOMMUNICATIONS PT AM 10DYV Receiver?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 03:40:50 UTC
From: wwg@coutts.UUCP
Message-ID: <210@coutts.UUCP>
Source record: 263324
Cross-posted to: sci.electronics,rec.radio.amateur.space,rec.radio.amateur.misc

The issue: Can this receiver work at 137+ Mhz?

I have a PYE aircraft AM transceiver, that was modified to be a RX only unit (which is fine), using the two crystal sockets for two different receive frequencies, since the TX crystal is no longer needed.

The current crystals cause the receiver to receive 123.2 and 122.8 Mhz at the moment. I want to receive the NOAA satellite WEFAX signals on 137.5 and 137.62 Mhz using this old receiver. The crystals currently in there are in the:

(123.2 - 10.7) / 3 = 37.5 Mhz neighbourhood (this is verified).

The 137.5 Mhz freq requires a 42.26666 Mhz crystal.

The receiver details:

PYE TELECOMMUNICATIONS Model PT AM 10DYV
Serial 1944D, input 12 Volts, and has 4 tubes, of which none are required for receiving (receiver works with switch on standby, without lighting the tube filaments).

It seems a bit of a stretch to go from a 37.5 Mhz crystal to 42.266 Mhz, but there is a series connected inductor that is tunable (at least in the current rendition of its wiring -- I don't have a schematic, so I don't know if this is original or not).

I'm not sure how fussy the front end in this radio is... I doubt any serious problem there. Again with no schematic, and without having done much tracing from the antenna yet, its my opionion that there is not much "tuned circuit" to discriminate 137 Mhz from 120 Mhz.

Anybody familiar (or not) with this radio, or someone with access to its schematic wish to comment on this? I'll have to get crystal(s) made to try this, which is the reason for this post. Should I invest/waste my money on crystals for this end?

Of course, I'm assuming that NOAA signals are AM audio signals. However, if this should turn out to be FM instead-- no big deal. I can build a demod circuit after the IF section. Email preferred, thanks.

>'no references'.

That's US Coast Guard Radio Station Portsmouth, VA; I wouldn't suggest that you answer their CQ, though ;). What you heard was their CQ tape fishing for some traffic; they'll take WX, position reports, and medical traffic, but no commercial traffic, from any ships and boats.

If you're near a library that contains a government documents depository look for publications such as WORLDWIDE MARINE WEATHER BROADCASTS to connect callsigns you hear with the various shore stations.

You'll hear NMN and others on 4,6,8,12,16, and 22 MHz; good code practice when they send the WX and Notice To Mariner broadcasts (code speed is 16-18 wpm).

Jeff NH6IL (ex NMO/Honolulu and NMC6/Monterey employee)

937. Daily Summary of Solar Geophysical Activity for 17 July

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 05:51:44 UTC

DAILY SUMMARY OF SOLAR GEOPHYSICAL ACTIVITY

17 JULY, 1994

/\

(Based In-Part On SESC Observational Data)

SOLAR AND GEOPHYSICAL ACTIVITY INDICES FOR 17 JULY, 1994

NOTE: Energetic electrons at greater than 2 MeV have become enhanced again.
The fluence values are again at moderate levels.

Greater than 2 MeV Electron Fluence for 17 JUL is: 7.9E+08

SYNOPSIS OF ACTIVITY

Solar activity was at very low levels.

Solar activity forecast: solar activity is expected to be
at very low to low levels.

The geomagnetic field has been at quiet to active levels
for the past 24 hours.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels.

Event probabilities 18 jul-20 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 18 jul-20 jul

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were below-normal on transpolar
and transauroral paths. Polar and high latitude substorming
resulted in periods of moderate multipathing and associated
fading. However, conditions have begun improving and are
expected to continue improving to near-normal values on about
19 July.

EVENTS WITH SWEEPS AND/OR OPTICAL PHENOMENA FOR THE LAST UTC DAY

Date Begin Max End Xray Op Region Locn Sweeps/Optical Observations
------ ---- ---- ---- ---- -- ------ ------ ---
NO EVENTS OBSERVED.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep
Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Can anyone give me the e-mail addres for Gracilis Inc. I have tried info@gracilis.com but I get a "return-to-sender" response. Do they have a BBS or another access location other than Internet? Any info would be helpful.

Greg - KA4IWU

940. Attorney for ARRL!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 10:18:22 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.110.000A4EBA@indirect.com>
Source record: 263348

Chris Imlay, attorney for the ARRL will be the special guest on Ham Radio
& More this Sunday, 7-24-94, at 6:00pm EST, on the Talk America
Network. If you have any questions regarding FCC laws, what you can
or can't do legally, give Chris a call on the show Sunday at 1-800-298-talk.
The show is on in 23 cities and via satellite on Spacenet 3, Transponder 9,
6.8 audio. (The 6.8 audio is important). Call 602-241-1510 for more info.
73, Len, KB7LPW

941. F.A.R.E. DUNKS ARRL!!!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 10:26:05 UTC
From: lenwink@indirect.com
Message-ID: <lenwink.111.000A6FA3@indirect.com>
Source record: 263349

That's right. F.A.R.E. 1994, the Family Amateur Radio Event, Saturday,
September 17, 1994, at Rawhide Theme Park, in Scottsdale, Arizona,
will DUNK the ARRL. Last year's F.A.R.E. had more than 3,000 attendees.
This year will be bigger and better still with activities for the kids such as:
The NASA Spaceball Ride, The Moonwalk Ride, face painting, Ronald
McDonald, seminars, food, great raffles & door prizes, how to seminars,
"hands on" operating stations including AMSAT, ATV, PACKET, MARS,
HF voice & CW, K7UGA (Senator Goldwater) event station, autopatch
operation, outside 6:00am swapmeet, 9:00amexhibit hall, and
a 250 gallon dunk tank occupied by Cliff Hauser, KD6XH, ARRL Arizona
Section Manager, and Fried Heyn, WA6WZO, Southwestern Division
Director, among others. Don't miss this great event. For information, e'mail
me. $1.00 admission in advance, $2.00 at door, under 18 free, $5.00
tailgaters, $50.00 inside commercial exhibitors. ALL proceeds go to the
12 local ham clubs sponsoring the event.
73, Len, KB7LPW

The following is a QST

Hawaii to the mainland on VHF and UHF, floods in Georgia and a ham on the run. These stories and more on Newsline report number 883 coming your way right now!

(*****
HAWAII TO MAINLAND ATV

The United States mainland and the island state of Hawaii have been joined by several modes including amateur television. The DX event began on Monday July the 11th and is continuing as we go to air. Gordon West, WB6NOA literally put a contact on hold to file this report:

"In the background is Paul Lieb, KH6HME. That is pouring it on two meters, 432, 1296. If fact, the first ever video from Hawaii to California was received right here at our station, WB6NOA. P4 good quality video showing the KH6HME beacon on Mauna Loa. This is the first time in amateur television that we have had such a long distance video received. Right during the long haul troppo from California to Hawaii was a sporadic E opening. So California was working Hawaii and then they were working British Columbia and Washington all on two meters. I'm working Hawaii right now."
Gordon West, WB6NOA

VHF and UHF DXers are saying that this is the best opening in years. Most say that they think its the signal for a hot DX summer to come.

(*****
ILLEGAL BROADCAST IN PUNA

Still in Hawaii, word that the Honolulu FCC Office has busted another unlicensed broadcaster. This, after it received a fax of an advertisement for "Masters of the Symphony," broadcast by Classical Radio Puna on 89.9 MHz.
Puna is an area on the Big Island of Hawaii to the south of Hilo. The flyer indicated the station operated on weekends from 8 PM to midnight. Since there is no FCC authorization for an FM broadcast station on 89.9 MHz in Hawaii, Honolulu agents John Raymond and Jeffrey Guerpo traveled to the Big Island and located

the pirate broadcast station in a residence in Hawaiian Paradise Park. This is a rural subdivision in the Puna district with over 130 miles of unpaved roads, no street lighting, and no mail delivery.
The station operator turned out to be retired and disabled individual who readily admitted to operating the station without authorization from the FCC. In fact, he told the agents that God had revealed to him that his life mission was to make classical music available to unserved communities.
After giving the matter careful consideration and in view of the alleged offenders medical and financial status, issuance of a Notice of Apparent Liability was not deemed worthwhile. The unnamed subject later indicated to the FCC that he had thought again about what he had been doing. After considering the matter he sent the FM transmitter to South America to be used by his missionary friend. The Honolulu FCC office has not received any reports of further activity by Classical Radio Puna since then.

(*****
SAREX

SAREX STS-65 is in orbit and on the air. The Space Shuttle Columbia roared into the blue skies of the Kennedy Space Center on Friday, July 8th to begin the second International Microgravity Laboratory Mission. The near flawless countdown resulted in an on-time launch of the mission at 16:43 UTC. The seven member crew of STS-65 is now half-way through its planned 14 days on-orbit. Two of the crew members on board Columbia are ham radio operators. They are the newly licensed Shuttle Commander Robert Cabana, KC5HBV and Astronaut Don Thomas, KC5FVF. Both are operating the Shuttle Amateur Radio Experiment from the orbiters mid-deck. Ground based amateur radio operators can communicate with the two astronaut hams through packet radio and, when time permits, make voice contacts as well. In addition, thirteen scheduled school group contacts with students in the United States, Germany, and Japan are also planned.
Amateur Astronomers who say their frustrated at not being able to see the astronomically event of the century say they plan now to hook up radios and listen to it instead. So, thousands of astronomers soon will become SWL's and join the many hams how will also be listening in as the Shoemaker Levy 9 comet slams into Jupiter to meet a fiery end. Astronomers will not actually be able
to see the collision which is expected to have a considerable effect on the gassy planets atmosphere because it will occur on the far side of Jupiter away from the earth. But it turns out Jupiter emits radio waves at frequencies between 500 kHz and 40 MHz. Scientists think these signals are caused by electrons breaking free of a magnet bond between the planet and its moon Io.

On an earth based shortwave radio they sound like waves crashing on a beach. The New Scientist Magazine says that groups of radio enthusiasts will listen for changes in the sound when the comet Shoemaker Levy 9 collides with Jupiter starting on July 16th.

(*****
GEORGIA FLOOD

One of the largest amateur radio emergency communications efforts ever is underway in the southeastern U.S. Amateur radio operators are assisting officials throughout southern Georgia. That's the area devastated from flooding caused by Tropical Storm Alberto. Jim Altman, N4UCK, is the ARRL's Section Manager for Georgia:

"There are several hundred amateurs currently in the field. Basically, like in any disaster such as Andrew or Hugo or similar.

Amateurs have been involved in initially primary data gathering. And then as the even progresses we have been involved in coordination of disaster relief for the Red Cross and Salvation Army and the other agencies FEMA and GEMA to provide them with coordination information primarily." Jim Altman, N4UCK.

To give you an idea how severe and widespread the damage is, 31 Georgia counties have been declared federal disaster areas. More than 20 people are dead. 600 bridges have been swept way and nearly half a million acres of croplands have been turned into a swamp.

"You've got shelters open all across south GA. There are tens and tens of thousands of people displaced from their homes. Half the City of Albany is under water. The City of Bainbridge, if it is not under water yet, is about to be. And these relief centers are coordinating, via amateur radio, as well as other communications methods in order to achieve the delivery of things like meals. So we are handling the traffic from how high the river is now to where's the coffee." Altman, N4UCK.

Altman tells Newsline most communications are by voice, but packet is also in use. The exact number of amateurs assisting is not available. But it's believed to number well into the hundreds.

"I know that one of the net controls on the HF net told me that he had 90 pages of notes at this point. I have probably have two or three hundred callsigns on my lists and pieces of paper of people who have been checking. Now over the last three or four days, the scope of this event is absolutely massive. I was at a meeting earlier today with the Federal Emergency Management and State Emergency Management. They were saying that this is worse than what happened in Iowa last year. We've got literally hundreds of communities that have become isolated with no way in

or out of them." Altman, N4UCK.

Altman sez amateurs from other states including Alabama and South Carolina have arrived to help with the effort.

"Georgia has a large number of counties. It has over 159 counties. And I would estimate that we're providing services in probably 45 to 50 of those at this time. Altman, N4UCK.

As we go to air, Altman expected the need for amateur communications services to be levelling off as floodwaters begin to recede.
More on this story in upcoming Newsline reports.

(*****
N6NHG WANTED BY POLICE

Kevin David Mitnick, N6NHG, of Van Nuys, California is reportedly on the run once again. Mitnick is the legendary computer hacker who first gained infamy for breaking into a Department of Defense computer in the 1980's. CBS news reported on Monday, July 11th that authorities believe the thirty year old Mitnick has been using tele-computing to again breach the security of a number of heavily guarded computer and communications networks. These include computers used by Pacific Telephone and the California State Department of Motor Vehicles. Police believe that Mitnick may possibly be trying to create a total new identity for himself.
Authorities told the Los Angeles Times that Mitnick was last spotted at a shop in Studio City, California. They say he attempted to pick-up some fax'ed documents belonging to the Department of motor Vehicles. When police moved in, they claim he threw the papers at them and ran.
A warrant has been issued accusing Mitnick of violating his parole on a previous computer hacking conviction. One of the terms of his parole forbid him from using a computer for any illegal purpose.

(*****
ARNS AWARDS

The Amateur Radio News Service has announced the winners of its 1993 ham radio newsletter awards. More than 100 clubs entered the annual newsletter competition. Twenty seven were rated "superior," with the top three being The Atlanta Ham edited by James Massara, N2EST for the Atlanta Radio Club; The Readout by Clarency Pinheiro, WA6ZLO for the Stanislaus, California Amateur Radio Association and once again the W3OK Corral by Clarence Snyder, W3PYF for the Delaware - Lehigh Amateur Radio Club. Congratulations to all of the winners.

(*****
UK INTERFERENCE

The United Kingdom's Radiocommunications Agency has had to investigate interference from unattended operation of digital modes on 144 and 432 MHz. In several instances it had to find a way to gain access to an unattended transmitter site when the operator was not present. While British license holders are not required to notify the local Radio Investigation Service for such operation, British hams have been asked to give thought as to how their station could be closed down in their absence if problems arise.

(*****
DX - SVALBARD

In DX, word that LA4LN and LB3RC, will sign JW4LN and LB3R/JW respectively from the western coast of Vest-Spitsbergen from August 1st to the 20th. This is a scientific expedition to Svlbard and not a DXpedition. Even so, they will be operating all bands 160-10 meters with special attention to the WARC frequencies. Activity will be on CW, SSB and the digital modes in the mornings, evenings and when the weather is bad, and also when they do not have to chase away the dangerous polar bears! QSL direct only with an SASE and return postage to the respective operators home calls.

(*****
NET REGISTRATION

This reminder from ARRL headquarters. Nets have until September 6, 1994, to register in the 1995-96 ARRL Net Directory. The new edition will not carry over information from previous directories, so net managers must send a registration card known as Form F S D 85 to Headquarters. The address is 225 Main Street in Newington, Connecticut 06111.

(*****
ZL CEPT

A recent report in the W5YI ham radio newsletter says New Zealand has joined the growing number of nations adopting the pan-European CEPT ham radio license. Well the story is correct but it is a bit late. Actually it is about a year late according to Jim Meachen, ZL2BHF who is the President of the New Zealand Amateur Radio Transmitting Society.
The NZART is New Zealand's national ham radio society. Kind of the ARRL of New Zealand. As such it was directly involved in backing the adoption of CEPT. Meachen says that the CEPT universal ham radio license has been well received by that nations amateur radio community.

The following is a QST

Hawaii to the mainland on VHF and UHF, floods in Georgia and a ham on the run. These stories and more on Newsline report number 883 coming your way right now!

(*****
HAWAII TO MAINLAND ATV

The United States mainland and the island state of Hawaii have been joined by several modes including amateur television. The DX event began on Monday July the 11th and is continuing as we go to air. Gordon West, WB6NOA literally put a contact on hold to file this report:

"In the background is Paul Lieb, KH6HME. That is pouring it on two meters, 432, 1296. If fact, the first ever video from Hawaii to California was received right here at our station, WB6NOA. P4 good quality video showing the KH6HME beacon on Mauna Loa. This is the first time in amateur television that we have had such a long distance video received. Right during the long haul troppo from California to Hawaii was a sporadic E opening. So California was working Hawaii and then they were working British Columbia and Washington all on two meters. I'm working Hawaii right now."
Gordon West, WB6NOA

VHF and UHF DXers are saying that this is the best opening in years. Most say that they think its the signal for a hot DX summer to come.

(*****
ILLEGAL BROADCAST IN PUNA

Still in Hawaii, word that the Honolulu FCC Office has busted another unlicensed broadcaster. This, after it received a fax of an advertisement for "Masters of the Symphony," broadcast by Classical Radio Puna on 89.9 MHz.
Puna is an area on the Big Island of Hawaii to the south of Hilo. The flyer indicated the station operated on weekends from 8 PM to midnight. Since there is no FCC authorization for an FM broadcast station on 89.9 MHz in Hawaii, Honolulu agents John Raymond and Jeffrey Guerpo traveled to the Big Island and located

the pirate broadcast station in a residence in Hawaiian Paradise Park. This is a rural subdivision in the Puna district with over 130 miles of unpaved roads, no street lighting, and no mail delivery.
The station operator turned out to be retired and disabled individual who readily admitted to operating the station without authorization from the FCC. In fact, he told the agents that God had revealed to him that his life mission was to make classical music available to unserved communities.
After giving the matter careful consideration and in view of the alleged offenders medical and financial status, issuance of a Notice of Apparent Liability was not deemed worthwhile. The unnamed subject later indicated to the FCC that he had thought again about what he had been doing. After considering the matter he sent the FM transmitter to South America to be used by his missionary friend. The Honolulu FCC office has not received any reports of further activity by Classical Radio Puna since then.

(*****
SAREX

SAREX STS-65 is in orbit and on the air. The Space Shuttle Columbia roared into the blue skies of the Kennedy Space Center on Friday, July 8th to begin the second International Microgravity Laboratory Mission. The near flawless countdown resulted in an on-time launch of the mission at 16:43 UTC. The seven member crew of STS-65 is now half-way through its planned 14 days on-orbit. Two of the crew members on board Columbia are ham radio operators. They are the newly licensed Shuttle Commander Robert Cabana, KC5HBV and Astronaut Don Thomas, KC5FVF. Both are operating the Shuttle Amateur Radio Experiment from the orbiters mid-deck. Ground based amateur radio operators can communicate with the two astronaut hams through packet radio and, when time permits, make voice contacts as well. In addition, thirteen scheduled school group contacts with students in the United States, Germany, and Japan are also planned.
Amateur Astronomers who say their frustrated at not being able to see the astronomically event of the century say they plan now to hook up radios and listen to it instead. So, thousands of astronomers soon will become SWL's and join the many hams how will also be listening in as the Shoemaker Levy 9 comet slams into Jupiter to meet a fiery end. Astronomers will not actually be able
to see the collision which is expected to have a considerable effect on the gassy planets atmosphere because it will occur on the far side of Jupiter away from the earth. But it turns out Jupiter emits radio waves at frequencies between 500 kHz and 40 MHz. Scientists think these signals are caused by electrons breaking free of a magnet bond between the planet and its moon Io.

On an earth based shortwave radio they sound like waves crashing on a beach. The New Scientist Magazine says that groups of radio enthusiasts will listen for changes in the sound when the comet Shoemaker Levy 9 collides with Jupiter starting on July 16th.

(*****
GEORGIA FLOOD

One of the largest amateur radio emergency communications efforts ever is underway in the southeastern U.S. Amateur radio operators are assisting officials throughout southern Georgia. That's the area devastated from flooding caused by Tropical Storm Alberto. Jim Altman, N4UCK, is the ARRL's Section Manager for Georgia:

"There are several hundred amateurs currently in the field. Basically, like in any disaster such as Andrew or Hugo or similar.

Amateurs have been involved in initially primary data gathering. And then as the even progresses we have been involved in coordination of disaster relief for the Red Cross and Salvation Army and the other agencies FEMA and GEMA to provide them with coordination information primarily." Jim Altman, N4UCK.

To give you an idea how severe and widespread the damage is, 31 Georgia counties have been declared federal disaster areas. More than 20 people are dead. 600 bridges have been swept way and nearly half a million acres of croplands have been turned into a swamp.

"You've got shelters open all across south GA. There are tens and tens of thousands of people displaced from their homes. Half the City of Albany is under water. The City of Bainbridge, if it is not under water yet, is about to be. And these relief centers are coordinating, via amateur radio, as well as other communications methods in order to achieve the delivery of things like meals. So we are handling the traffic from how high the river is now to where's the coffee." Altman, N4UCK.

Altman tells Newsline most communications are by voice, but packet is also in use. The exact number of amateurs assisting is not available. But it's believed to number well into the hundreds.

"I know that one of the net controls on the HF net told me that he had 90 pages of notes at this point. I have probably have two or three hundred callsigns on my lists and pieces of paper of people who have been checking. Now over the last three or four days, the scope of this event is absolutely massive. I was at a meeting earlier today with the Federal Emergency Management and State Emergency Management. They were saying that this is worse than what happened in Iowa last year. We've got literally hundreds of communities that have become isolated with no way in

or out of them." Altman, N4UCK.

Altman sez amateurs from other states including Alabama and South Carolina have arrived to help with the effort.

"Georgia has a large number of counties. It has over 159 counties. And I would estimate that we're providing services in probably 45 to 50 of those at this time. Altman, N4UCK.

As we go to air, Altman expected the need for amateur communications services to be levelling off as floodwaters begin to recede.
More on this story in upcoming Newsline reports.

(*****
N6NHG WANTED BY POLICE

Kevin David Mitnick, N6NHG, of Van Nuys, California is reportedly on the run once again. Mitnick is the legendary computer hacker who first gained infamy for breaking into a Department of Defense computer in the 1980's. CBS news reported on Monday, July 11th that authorities believe the thirty year old Mitnick has been using tele-computing to again breach the security of a number of heavily guarded computer and communications networks. These include computers used by Pacific Telephone and the California State Department of Motor Vehicles. Police believe that Mitnick may possibly be trying to create a total new identity for himself.
Authorities told the Los Angeles Times that Mitnick was last spotted at a shop in Studio City, California. They say he attempted to pick-up some fax'ed documents belonging to the Department of motor Vehicles. When police moved in, they claim he threw the papers at them and ran.
A warrant has been issued accusing Mitnick of violating his parole on a previous computer hacking conviction. One of the terms of his parole forbid him from using a computer for any illegal purpose.

(*****
ARNS AWARDS

The Amateur Radio News Service has announced the winners of its 1993 ham radio newsletter awards. More than 100 clubs entered the annual newsletter competition. Twenty seven were rated "superior," with the top three being The Atlanta Ham edited by James Massara, N2EST for the Atlanta Radio Club; The Readout by Clarency Pinheiro, WA6ZLO for the Stanislaus, California Amateur Radio Association and once again the W3OK Corral by Clarence Snyder, W3PYF for the Delaware - Lehigh Amateur Radio Club. Congratulations to all of the winners.

(*****
UK INTERFERENCE

The United Kingdom's Radiocommunications Agency has had to investigate interference from unattended operation of digital modes on 144 and 432 MHz. In several instances it had to find a way to gain access to an unattended transmitter site when the operator was not present. While British license holders are not required to notify the local Radio Investigation Service for such operation, British hams have been asked to give thought as to how their station could be closed down in their absence if problems arise.

(*****
DX - SVALBARD

In DX, word that LA4LN and LB3RC, will sign JW4LN and LB3R/JW respectively from the western coast of Vest-Spitsbergen from August 1st to the 20th. This is a scientific expedition to Svlbard and not a DXpedition. Even so, they will be operating all bands 160-10 meters with special attention to the WARC frequencies. Activity will be on CW, SSB and the digital modes in the mornings, evenings and when the weather is bad, and also when they do not have to chase away the dangerous polar bears! QSL direct only with an SASE and return postage to the respective operators home calls.

(*****
NET REGISTRATION

This reminder from ARRL headquarters. Nets have until September 6, 1994, to register in the 1995-96 ARRL Net Directory. The new edition will not carry over information from previous directories, so net managers must send a registration card known as Form F S D 85 to Headquarters. The address is 225 Main Street in Newington, Connecticut 06111.

(*****
ZL CEPT

A recent report in the W5YI ham radio newsletter says New Zealand has joined the growing number of nations adopting the pan-European CEPT ham radio license. Well the story is correct but it is a bit late. Actually it is about a year late according to Jim Meachen, ZL2BHF who is the President of the New Zealand Amateur Radio Transmitting Society.
The NZART is New Zealand's national ham radio society. Kind of the ARRL of New Zealand. As such it was directly involved in backing the adoption of CEPT. Meachen says that the CEPT universal ham radio license has been well received by that nations amateur radio community.

944. Airshow Contact

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 12:14:37 UTC
From: ABFHB@STDVAX.GSFC.NASA.GOV
Message-ID: <940718081437.26609364@STDVAX.GSFC.NASA.GOV>
Source record: 263335

Roy,

Here is my input regarding the Airshow Contact.

73,

Frank

On Saturday July 16, the 25th anniversary of the liftoff of Apollo-11 on its historic journey to the moon, General Thomas Stafford (Ret), a former NASA astronaut who flew on-board several Gemini and Apollo missions, exchanged greetings with STS-65 mission commander Robert Cabana, KC5HBV, using the Shuttle Amateur Radio Experiment (SAREX) radio. General Stafford was in Oklahoma City attending the Airshow America. Using the SAREX telebridge, General Stafford was able to communicate with Commander Cabana first through a ground station in Hawaii and then through a ground station in San Diego. A special phone patch also allowed the crowd of 150,000 spectators at the airshow to hear this historic SAREX contact. After Commander Cabana extended his greeting from space, Stafford asked about the Shuttle and living in space. General Stafford was quick to point out that "the Space Shuttle can be considered luxurious living as compared to that small capsule I flew in during my flight on Apollo-10 25 years ago". General Stafford thanked Commander Cabana for the contact and signed clear.

One observation made by the SAREX team was the vitual silence of the audience during this live exchange between the former astronaut and the Space Shuttle Commander as compared to the deafening roar of the crowd and the planes during the air show. It seemed that the audiance was truly transfixed by our (amateur radio's) ability to talk to an astronaut while they are in space.

945. Re: Gray Areas of 'No Commercial Use'

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 12:36:21 UTC
From: jsalemi@doghouse.win.net
Message-ID: <412@doghouse.win.net>
Source record: 263372

In article <tedtrostCt3qoD.uI@netcom.com>, Ted Trost (tedtrost@netcom.com) writes:
>: May not be commercial under the current rules, but could be a violation
>: of the third-party traffic rules.
>
>Huh? Which rule?
>

97.115, which governs third-party communications. It's possible to get messages over the internet that are from countries that the US doesn't have a third-party agreement with. Transmitting those messages over the air (in the case of reading your remote mail over the air, for example) could be a violation of this rule. That's why the internet<->packet gateway systems hold mail first so the sysop can check to make sure the traffic is legal before releasing it.

A personal reply to last weeks WIA Federal news item

This position of not allowing members to change to another state division seems ill-advised to me. When members felt strongly enough in the past about the way the affairs of a division were being run that they opted to transfer to another division as a temporary haven, the result of this new ruling will now be to ensure that these people are lost to the WIA altogether.

Is it not better to keep members in the fold, and their contributions helping the cause of Amateur Radio than to drive them out completely? Who will the WIA represent -- only a minority of licensed amateurs in the state so afflicted. What sort of voice will the WIA have when it cannot claim to represent a sufficient number of amateurs in the hobby? Will this lead to the establishment of a rival body?

These are personal concerns of this writer, who did think of changing divisions in recent times, even resigning, but thought of the repercussions of this act multiplied by the many other amateurs with the same inclinations. The reason that I did not do this was that all things pass in the course of time, hopefully without lasting damage, and because of the need to keep the numbers up so that the SMA is still dealing with the representatives of many Australian Amateurs.

I hope the Federal office will see the transfers as a means of sheltering from unwanted troubles and not as a form of poaching, because I am sure it was not the latter.

de Pat VK2JPA

IPS weekly report

SUMMARY OF ACTIVITY

Solar activity was very low 8th-11th, and 13th July, and low on 12th and 14th.

The geomagnetic field at Learmonth (WA) was quiet 8th-13th, then quiet to active on 14th with a minor storm period 1500-1800 UT.

Ionospheric F2 critical frequencies at Sydney were near predicted values with 15-30 per cent enhancements on 14th July 1100-1600 UT.

FORECAST FOR THE NEXT WEEK (15 - 21 July)

SOLAR: Very low to low.

GEOMAGNETIC: Active on 15-16th, quiet to unsettled otherwise.

IONOSPHERIC: Near normal initially until 20th, slightly depressed thereafter.

Courtesy of IPS Radio and Space Services, Sydney

Avis Island

It was reported by the RTTY Digital Journal in the May/June issue that Avis Island will be activated July 21-25 using the callsign YW0RCV. The occasion marks the 191st anniversary of the Venezuelan Navy and 60 years for the Venezuelan Radio Club. VRC will sponsor this all mode (SSB, CW, and Digital) all band (no WARC) event.

QSL to IARU Bureau via YV5AJ, Radio Club Venezolano, POB 2205, Caracas, 1010-A, Venezuela. See September 1993 DX News column in the RTTY Digital Journal for more details.

NOTES OF INTEREST.

SWAZILAND, 3DA0. 3DA0CA, JON RUDY HAD A KAM SENT TO HIM FOR RTTY FROM THE STATES AND MURPHY STRUCK 3 DAYS AFTER HE GOT IT OUT OF THE BOX. A LIGHTNING STORM CAME IN AND HIT THE PHONE LINE. THE COMPUTER WAS NEAR, ARCHED THRU THE PLASTIC COMPUTER, WIPED OUT THE COM PORT OF THE RS232 BUFFER CHIP. JON NEEDS AN LMC 6034IN DRIVER FOR THE KAM. OR SCHEMATICS AND OR COM1 DRIVER CHIP FOR TOSHIBIA T-2000SX. ANYONE THAT MIGHT ASSIST HIM WOULD BE APPRECIATED.

FOR NEXT WEEK'S BULLETIN, SEND YOUR BANDPASS AND NOTES OF INTEREST TO LUCIANO, I5FLN AT ZS5S.ZAF.AF OR AT I5FLN.ITA.EU.

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA

ARLD039 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Dave, VE2ZP/VE9CB, John, WB2K, Warren, NF1J, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QT. Thanks.

NORTHERN COOK ISLANDS. Ken, ZL2HU, is planning a six week SSB operation as ZK1KH, though no date has been mentioned. He will favor 21177 and 28490 kHz. Meanwhile, Steve, AA6LF, has wrapped up his ZK1ALF stint. Plans were for him to be on from Western Samoa through July 12, but he has yet to show on local PacketCluster nodes. A July 13 to 18 stop at Tokelau and July 18 to 25 stay on Wallis are on his itinerary.

The remainder of this bulletin dealt with various contests on the weekend of 9th-10th July.

Extracts from the 160m DX Bulletin no. 24 of 2/7/94

JW...SWALBARD
Tom LA4LN and Magne LB3RC will be QRV from 1-20 August as

JW5LN and LB3RC/JW. They will operate all bands frm 160m
to 10m CW/SSB/digi.

Qsl direct to their home callsign.

Be careful LA4LN address in CB is wrong!!!

YV0..AVES ISLAND (as mentioned elsewhere in this boradcast)
The group of YV guys will visit this rare island in
occasion of 60 years of Venezuelan radioclub. The
operation will start on July 21 until 25.

They will be active on all bands SSB/CW/digi except WARC
bands as YW0RCV.

Qsl via YV5AJ

ZA...ALBANIA
Mike ZA1MH is very active on all bands icluding 160. Mike
is an American missionary on Balkan peninsula. His home
call is K5KWG but he wants Qsl direct to ZA. His wife is
also active like ZA1EH.

ZA1MH - Mike Holman, BOX 19, Tirana, Albania.

TN...CONGO
Rudi, DK7PE will be in Brazzaville from July 11. The
expected call is TN0CW. When he get a license he will be
active for 10 days on all bands.

From many experiences of Rudi from Africa he will
monitoring frequency 1827 kHz between 2000-2100z. His
working fruequency will be 1832 kHz.

Sunrise and sunset in Brazzaville: 05:09z and 17:03z.

73! and see you on 160m!
Mike OM3ZJW

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065
Australia, for such matters as membership and general
enquiries. Enquiries can also be made by packet to the
President (Col) VK2CTD, or the Secretary (Pat) VK2JPA at
VK2RWI.

News items may be sent to Broadcast Officer PO Box 60
Blacktown 2148 Australia, or by packet to VK2JPA at VK2RWI.
Email addresses for the Broadcast Officer are :

patl(at)pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We know we reach New Zealand and many South Pacific islands, and we were reaching as far north as Japan when conditions were right. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer
That concludes the broadcast for this morning/evening.

What about volunteers from other branches of the federal government?
I'm a federal employee, I live in Alexandria, VA, and would be willing to
donate a couple of days of my time to help with the data entry. Perhaps
they could even pay me, providing the money could be transfered between
agencies.

948. FCC Delays now at 17 weeks!

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 13:21:24 UTC
From: taylor@tix.timeplex.COM
Message-ID: <9407181321.AA00954@tix.timeplex.com>
Source record: 263338

It would be nice if all these people whinning about the FCC delays would remember that we are just seeing the results of the prior Years under the Bush administration....no funding no technology upgrades and no new taxes. Everyone wants services, but we don't want to pay for the costly upgrades to newer computer technology and the all important staffing. There has been hiring freezes at the Federal level that have hurt many depart-ments at all levels. The prior FCC commissioners placed little importance on FCC funding. Charged fees go to the general fund (US Treasury). Only the Congress and the signature of the President can fund any Federal agency, i.e. they hafta have a budget. Yes, write to your Congressman to have them funded at an appropriate level. Maybe there's a chance to get things fixed at a reasonable level of service. The Federal workers in Gettysburg are doing their best I'm sure with the minimal resources they currently have. If we want to cut expenses and funding then just accept 12 to 17 weeks as routine service.

> open, so I guess I have to build one instead. Does anyone know where I can
> find a simple and potentially compact design/schematic for a 1750 Hz tone
> generator? Does anyone know where to buy one? How about a tuneable
> whistle? ;-) ;-)

("Tuneable whistles" _are_ available in various music shops disguised as
instrument tuners. Standard A above middle C is 440 Hz, so 1750 Hz is
just 10 Hz lower than the second octave above that, and some tuners
_do_ allow you to generate tones offset by varous controlled amounts: at
least my Korg does. :-))

Also, it shouldn't be too hard to whip up a 555-timer oscillator circuit
for 1750 Hz - check out any old electronics mag for any articles about the
555 IC: these things get published all the time, and most articles contain
the info needed to select the correct resistors/capacitor combination for
whatever frequency you need.

VE Teams have their choice on how to do this. The team I ran
for a few years checked for 1 minute of solid copy BEFORE giving
the candidate the multiple choice examination.

The reason is that the test CONTAINS a lot of the words (or
phrases) that were used on the tape and the candidate could
surely back-fill and possibly fix his copy to contain a correct
1 minute stretch with the words on the test. Essentially you
are giving the candidate some of the copy when you give him
the written multiple choice test so we felt the candidate's
copy should be checked for the 1 minute before he gets the
written.

Asbestos suit on:
It's already easy enough with multiple choice.

It's true that when you take the multiple choice test, process
of elimination might let you fill in that missing character in
a callsign or whatever, but when I took the exam, that problem
was solved easily enough: you could go back over your copy to
fill in characters only BEFORE you looked at the multiple choice.
Then you took the multiple choice and if you failed that, they'd
look for the solid minute.

The obvious rationale is that it's a lot simpler to check the results of a multiple choice test than it is to carefully count characters to see if you've got that solid minute. And it's also fairly easy to proctor the exam to see that people aren't continuing to "improve" their copy after the multiple choice has been passed out.

Hi,
I am one of the control operators of the w4bs repeater system in Memphis,TN.
We are looking for the frequency and duration of the NASA courtesy tones.

We would like to change the courtesy tones of our repeaters to remember the
25th Anniversary of the first man on moon.

If anybody has info on these tones please send me a e-mail msg.

Thanks in advance,

Suresh N9GSA

Be sure to thoroughly try out any HT you want to buy. Lots of modern
HT's are difficult to operate even if you can see what the display says.
I can't imagine operating some of them at all without being able to
see the display. It's too easy to hit the wrong button and get into
some wierd mode that you have to get out of to use the HT again.

Hi Steve;

To show you how popular the band is out here in California, LA has NO 440 channels left for repeaters. Sacramento (20 miles from me) is also full. I'm suprised that Columbus isn't packed as well. There just ins't as much activity on 440 as there is on 2-meters (we call it the CB band out here). But that is what is good about it. You can even put up your own repeater. Most of the 440 repeaters out here are listed as "closed", but you can usually listen for a while, then hop on and ask some questions about the repeater. Most the owners are very friendly, and won't care if you use it. Just ask. The worse thing they can do is say "no".

To put up your own repeater, I'd recommend getting a Motorola Micor mobile. They can be had for as little as $10 (or as much as $100). Very easy to convert into a repeater. If you can't afford a duplexer, just run two antennas (one for the tx, one for the rx). After it is up a while, people will start popping on, and you'll make friends and supporters in no time. I did that here in Sacramento. The hardest part is getting a site for the repeater. It can be done at no cost, but will take some ingenuity.

mail: parnass@ihlpf.att.com.

JULY

July 24, Sunday: Stickney, IL - DuPage ARC hamfest,
Hawthorne Race Course, 3500 South Cicero Ave. Handicap
accessible. Starts at 6 AM. Talk in on 142.25 MHz
with 107.2 PL. (-600). VE Testing 9 - 12. Advance
tickets are $4.00, $5.00 at the door.

This hamfest used to be held at the American Legion in
Downers Grove and was a good small to medium-sized ham-
fest. This year, there will be a 30,000 square foot
indoor exhibit area in an air conditioned building,
plus outdoor tailgating.

For advance tickets, send check payable to DARC,
enclose SASE, and send to Hamfest 94, 7511 Walnut Ave,
Woodridge, IL 60517. For commercial or fleamarket
tables info, call 708-985-9256.

July 31, Sunday: Sugar Grove, IL - Fox River Radio |
League (FRRL) Hamfest, Waubonsee Community College, |
Route 47 at Harter Road, 5 miles NW of Aurora, IL. Set |
up Sat 7 PM, Sun 6-8 AM, open to public 8 AM. Commer- |
cial dealers, flea market, computer vendors, refresh- |
ments. VE session: 10 AM (bring original license, a |
copy of license & photo ID). Free parking, camping |
nearby. Talk In on: 146.58/147.66. Adm: adv $4, door |
$5. Table: 8 ft $10. For advance tickets and informa- |
tion contact: Fox River Radio League, Box 673, Bata- |
via, IL 60510-673 or call Diana Skube, WD9API (708- |
293-7485), or Mark Hougaard, KB9FCC (708-810-1805).

July 31, Sunday: Racine, WI - Racine Hamfest, Sponsor:
Racine Megacycle Club - W9UDU South Hills Country Club,
East Frontage Rd. I-94 Between Hwy 20 & K. Advanced
admission SASE & $3.00. Send to: RMC P.O. Box 3
Racine, WI 53401. Information: 414-554-7565 - WB9USI

AUGUST

August 6, Saturday: Goshen, IN - Elkhart County Hamfest Sponsor: Elkhart County Radio Association Elkhart County 4-H Fair Grounds. 8AM to 3PM Advanced Tickets (till 7/1) $4.00, $5.00 at Gate. Send Ticket Requests or Table Reservations to: Elkhart County Hamfest, 20294 C.R. 36, Goshen, IN 46526 Information: 219-533-7632 - Jocelyne WZ9M

August 7, Sunday: Peotone, Il - Hamfesters Hamfest Will County Fairgrounds, Peotone, Il. Take I-57 South to Peotone Exit 327 (East). Flea market open 6:00am - 3:00pm. Tickets $4.00 advance w/double stub & $5.00 at gate w/single stub. No additional charge for flea market space. For advance tickets and information contact: Hamfesters Radio Club, Box 42792, Chicago, Il. 60642 or call Amateur Radio Info-Line: 1-708-535-AHAM

August 28, Sunday: Woodstock, IL - Tri-County Hamfest, Sponsor: Tri-County Radio Group, Inc. McHenry County Fairgrounds, Rte. 47 Junst North of Rte. 14. (Only 14 miles North of I90 on Rte. 47.) Advanced Tickets: $4.00, At The Door: $5.00 For advance tickets send check to: T.C.R.G., P.O. Box 3107, Skokie, IL 60076-6107 Information: 708-658-1678 Talk in on: 146.52

SEPTEMBER

September 11, Sunday: Joliet, IL - Bolingbrook ARS Ham/Computerfest, Inwood Recreation Center, 3000 W. Jefferson. This is a medium size hamfest with indoor/outdoor flea market. Gates open 8 AM for general public. Outdoor flea market on paved lot -- setup at 6 AM. Use Exit 253 from I55, or Exits 126/130 from I80. Admission $5. VE testing 9 AM - 12 noon. Bring original license and photocopy, ID and photo ID, plus $5.75 test fee. Novice-only tests are free. Talk-in 147.33, 224.54, and 443.525 MHz repeaters. Indoor table reservation, call Ed Weinstein at 708-085-0527. Info, BARS Hotline (708)759-7005 between 6 AM and 9 PM.

September 17-18, Saturday & Sunday: Peoria, IL - Superfest. Admission $5. For more info call (309)685-6698. Talk in on 146.76 (-600 kHz offset).

September 24-25, Saturday & Sunday: Grayslake, IL - Chicago FM Club, Ham Radio Expo. This is a large hamfest with indoor and outdoor flea markets. Lake County Fairgrounds, Rts 45 & 120. 6AM - 6PM. Info 146.76 MHz (-600). Admission $6 at gate, one ticket good for 2 days. Kids under 12 free.

OCTOBER

October 23, Sunday: Waukesha, WI - Kettle Moraine Ham-
fest Sponsor: Kettle Moraine Radio Amateurs Waukesha
County Exposition Center Forum Building, Highways J and
FT All orders MUST be accompanied by a SASE and mailed
to: KMRA Swapfest, P.O. Box 411, Waukesha, WI
53187-0411 General Admission - $4.00 ($5.00 at the
door)

NOVEMBER 1994

November 19-20, Sat.-Sun.: Fort Wayne, IN - Fort Wayne
Hamfest Sponsor: Allen County Amateur Radio Technical
Society (ACARTS) Allen County War Memorial Coliseum
Exposition Center Admission: $5.00 (No advance ticket
sales.) For information or table orders, send a SASE
to: ACARTS, P. O. Box 10342, Fort Wayne, IN 46851 or
call John Rufner at 219-483-6305 (table info) Don Gag-
non at 219-484-3317 (general info)

Nov 27, Sunday: Wheaton, IL - GMRS of Illinois May Fest
'94. Admission $5. Starts 8 AM. Setup 6 AM. Info,
call (708)690-1492.

COMPUTERFEST SCHEDULE

September 17, Saturday: Kankakee, IL - Computer Fest
1994. Sponsor: Kankakee River Valley Computer Users'
Group. Kankakee County Fairgrounds 9:00 a.m. to 3:30
p.m. Admission $4.00. Information: 815-935-8590 or

Well m'boy, let me tell you a story. I don't know the start, but I do know the middle. The end is yet to be...

In any hobby, there are going to be people who want to flaunt the rules and regulations. In hiking you have people cutting corners on trails. In flying, a few like to "bust minimums." In chess, some players are tempted to rearrange the board while their opponent is not looking. And, in Ham Radio, we have those who get a thrill out of inappropriate language and subject matter on the air.

The Infamous '435 repeater is a gathering spot for these bizarre individuals. There they feel free to use profanity, hurl racial epithets, retransmit recorded transmissions from elsewhere, ignore common ham courtesy, and just about any other written or unwritten rule.

Don't worry about using this machine. Most of the regular users seem to run considerable power and/or gain in order to climb to the top of the heap of jammers. I have heard LA basin stations on the input of this box as far away as Paso Robles and Bishop. Most users of this machine could probably communicate easier by going simplex!

Unfortunately, these folks have garnered bad publicity for hams, including a feature article in the LA Times entitled "Renegade Hams." Typical for the Times, letters sent by other hams deploring the 435 misfits were not printed for weeks, and then were buried deep within the paper.

One silver lining in the cloud is that the 435 machine seems to attract and hold the attention of those who want to abuse their operating priveleges. This tends to keep the misfits from abusing other repeaters. It becomes obvious when the 435 machine is down, as users quickly inflict their antics on other machines.

Oddly enough, some of the 435 users can be pretty good hams when not on their repeater of choice. I've bumped into a few on

other machines and did not even realize that they were 435 types until I was clued in by others.

In an ideal world, I would advocate that the "Singapore Solution" be applied to this problem. In the real world, it seems best to leave them be and simply ignore their garbage lest they trash up those repeaters that are used courteously.

LA has developed an undeserved reputation for garbage on repeaters. I think that this stems from hams visiting LA, scanning through the band, and happening on the 435 machine, which is a strong signal throughout the basin. Anyone listening to this machine for a few moments might be tempted to shut the rig off and declare the whole 2m band trashed! My advice is to listen to other machines before making any judgements. The vast majority of repeaters in the LA areas are operated and used just as courteously as repeaters anywhere in the world.

I've also gone the chisel route with my Icom BP-84 packs. I used a sharp chisel and smacked it with the heel of my hand instead of a hammer. On the Icom packs, you have to break loose a panel on the bottom of the pack for access. Two common 3-cell ni-cad AA cordless telephone packs from Radio Shack fit nicely with slightly less capacity than the originals (but more than the dead pack :-)). Back on the air for less than $20.00!

964. HEATHKIT radio clock and Linux?

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 18:10:27 UTC
From: jmorriso@bogomips.ee.ubc.ca
Message-ID: <1994Jul18.181027.9231@bogomips.ee.ubc.ca>
Source record: 263362
Cross-posted to: comp.os.linux.misc,rec.radio.amateur.digital.misc,rec.radio.amateur.misc

The Heathkit WWV clock has a serial output. I'd like to know how I can hook this up to Linux so other machines can set their clocks accurately (ie using rdate or xntp over packet or on the local ethernet LAN). I have code for something called "DCF" which is a German radio. Is this compatible or do I need something else? If the DCF stuff is compatible, I see that the Linux patches are quite old, and the serial port line discipline code has changed drastically, has anyone updated the patches?

It was back about twenty-five years ago that the head of the licensing
department at Gettysburg was found to be selling preferred amateur
callsigns under the table.

He was hung out to dry and the current system of you-get-the-next-one-in-
line-no-matter-what-so-don't-even-ask callsign assignment was put in place.

Great idea, Jeff! You know I would be willing to help out... :) Another
option would be to do it as a permissive TDY. I'm sure there are lots
of gov/mil within easy driving distance of DC, or at the Pentagon.

Sounds like a pretty tedious job, though. I could probably only stand
a day or two of it.

967. FCC delays - I contacted my senator

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 18:59:24 UTC
From: wilen@VNET.IBM.COM
Message-ID: <19940718.124044.838@almaden.ibm.com>
Source record: 263358

Over 13 years ago when I received my ham license, delays were
running 14 weeks. I remember taking my test at the FCC
office (this was before the VEC/VE program), passing, then
eagerly waiting for my license to arrive in the mail.

At the 10 week point, I was really wondering if I'd ever
see my license. The FCC didn't give me a "receipt" to prove
that I passed, so I was wondering if would have to take the
test again. I had no idea how long the license "should" have
taken, and I remember the FCC clerk in Baltimore telling me
that it was not a good idea to call the FCC office in Gettysburg.

After about 12 weeks, I wrote a letter to my US senator asking
him to intervene on my behalf. One week later, the senator's
office telephoned me to tell me that my license would be processed
very shortly. A few days later, my ticket was in my hands.
I never found out if the senator's office's call made a
difference, but at least I knew that my license was on its way.
At the same time, the FCC became aware that my senator's
office knew of a problem.

So, try writing to your senator or congressperson. It might
help your case, and it might help everyone waiting for a new
license. Believe it or not, the FCC might even appreciate
your action, since they could get allocated more persons
to do license processing.

Unless stated otherwise, the opinions expressed are my own.

968. Bicycle generates noise on 20 meters

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 19:15:54 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9407181415.ZM10757@SALCIUS2>
Source record: 263361

This weekend I went for a bike ride using my MFJ 20 meter SSB travel radio and hamstick antenna. Using a headset and handlebar mounted PTT switch, I was able to make contacts while riding, but I noticed that my bike creates a lot of RF noise when it is moving.

I have two theories as to the cause of the noise:

1. The tires create static charges while rolling on the pavement.
2. The hubs create static charges as metal parts rub against each other.

I suspect #1 above, because the noise was mostly gone while riding on wet roads after a rain shower. The noise reappeared when the road dried out.

Does anyone out there in internet-land have any ideas as to the cause and possible cures to this problem?

BTW, 20 meter bicycle-mobile really does work! Propagation was lousy on Saturday, but I still made contacts with North Dakota, Mississippi, Maine, Georgia, Texas, Oklahoma, Cape Breton Island, and Dominica, using 12 Watts into a hamstick antenna.

....
I turned on my HF rig on Sat., a few hours before the first impact was
expected, and tuned around a bit looking for any buzz-saw like sounds.
I did not find any, but ran across a bandit net on about 27.625 Mhz,
listened to them a while, and then went into another room, leaving
rig on. Suddenly, at near 21:05Z, a loud buzz-saw like sound came on,
stayed on pretty steady, dropping out just for a few seconds at a time,
until about 21:55Z. While it was still on, I scanned around from about
27.5 to 29.0 Mhz, and found the same sound at several frequencies
in that region, more or less loud in different places, but never really
budging my S meter. It was loudest on SSB, which was the mode I had
been in when it first came on. After it went off at 21:55, more gradually
than it had come on, I thought I heard it again a few times later in
the evening, but usually not as loud as it sounded the first time.
It so happened that I was on a 3-el yagi tuned for 10 meters, and I
found a broad heading peak at about NW. Other family members were watching
TV at the time with an outdoor antenna, and noticed no disturbance, but
they were probably getting quite strong video signals, so a weak
disturbance probably would not be noticed. Might this have been Jupiter?

I have an excellent ICOM radio, the R-100 which is only 1 year old and is in mint condition. It has all original equipment with this radio (like antennas, mounting bracket, screws, box, manual, etc.). I am interested in getting another radio since this radio has served it purpose for me (see what is out on the radio waves). This is a full coverage radio and is very sensitive. It has AM, FM and wide-FM modes and I have not had any problem with it. I do not want to go lower than $500 for this radio but I would consider paying shipping and handling. If your interested give me email and I will get back to you.

>should try to get the most value for your dollar. I don't think the
>Ringo fills that bill very well.

This is all speculation. I've made quantitative measurements between my
Ringo Ranger, a quarter wave ground plane, an Isopole, and a J-pole.
All were mounted on top of similar trees and fed approximately the same.
The Ringo outperformed them all, more or less. More in the case of the
1/4 wave, less compared to J-pole and Isopole although the Isopole seems
to be very freq. selective about giving a good pattern.
What's the big deal about an end-fed half wave with matching network?
The AEA Hotrod antenna is similar and would probably make a good base
station antenna as well.
Is there much difference between an AR-2 Ringo and a Ringo Ranger or
Ranger II? Some, but not much in my experience.

979. Need info on Wilson 460 mhz conversion

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-18 22:34:58 UTC
From: carndt@netcom.com
Message-ID: <carndtCt5qqA.3Bt@netcom.com>
Source record: 263369

I recently came across a couple Wilson programmable radios. Sorry, I can't locate the model number, it must have been on a sticker that came off. The s/n is still there, though. Anyway, this is the 10 channel 460 mhz radio with the sloped front, the 2 digit LED display, and the membrane keypad.

I have figured out how to program it, and it will take an amateur band freq. However, keying the mike will light the tx light, but the t/r relay doesn't pull in.

Can this radio be made to work on 440? If so, how?

Is Wilson still around? If so, I'll call em.

Anyone have acces to any info on this radio? I'll gladly pay copying and mailing charges.

FWTW, I did check the oak.oakland.edu ftp files for mods. No dice.

Thanks,

Chris KD6DSI

To all radio amateurs

SB QST ARL ARLB061
ARLB061 Rover rules adopted

Rover Rules Adopted

Today, the ARRL Awards Committee voted unanimously to accept a recommendation to modify rover category rules for the January VHF Sweepstakes, June VHF QSO Party and September VHF QSO Party. The new rules, proposed by W3EP, are as follows:

Rule 1 (C) Rover: A rover consists of one or two operators of a single station that moves among two or more grid locators during the contest. A rover vehicle may transport only one station using a single call sign; thus a rover may not operate with multiple call signs under the family rule 7 (C). Rover vehicles must transport all the equipment, power supplies, and antennas used at each operating site. This rule is not intended to prevent an operator from using the same call sign to submit separate logs for single-operator (fixed station) and rover-class entries. Rovers add ''rover'' on phone and /R on CW after their call signs.

Rule 4 (D) Rovers only: The total rover score is the sum of the scores made from each grid locator. Submit separate logs for each grid where operating sites were established and score them individually, as explained in paragraphs (A)-(C) above. Then add the scores from each grid on the summary sheet for the total rover score. Rovers are listed in the published contest results under the division from which the highest aggregate score was made. For the January VHF Sweepstakes only: Rovers entering club competition must indicate the grid locators where operating sites were within 175 miles of the club's center. Only scores made from those grid locations count for club competition.

ARRL Bulletin 62 ARLB062
From ARRL Headquarters
Newington CT July 18, 1994
To all radio amateurs

SB QST ARL ARLB062
ARLB062 BOD meeting highlights

The Board of Directors met in Rocky Hill, Connecticut, July 15, 1994. The following is a summary of the meeting's highlights:

The ARRL Spectrum Committee has been asked to study the bands between 420 MHz and 300 GHz to enable a better understanding of present and future activities in this region of the spectrum, giving priority to those bands subject to spectrum reallocations by the government.

The Board commissioned an RF Safety Committee to advise the Board and staff on safe operating practices for the development of policy and educational methods and materials. Members to be selected by the President.

The ARRL Professional Media Award was created to recognize media professionals who make distinguished contributions to the public image of Amateur Radio.

In recognition of more than ten years of successful SAREX missions aboard space shuttle flights, the Board expressed its gratitude to the SAREX Working Group. The Board commended the group for its efforts to make Amateur Radio communications a part of future space missions, including the Space Station.

Jonathan M. LeBretton, N1MJM, of Plymouth, Massachusetts, was selected as the 1993 Hiram Percy Maxim Memorial Award winner.

James Dalley, W0NAP, of Centerville, Utah, was selected as the Herb S. Brier Volunteer Instructor of the Year.

The Board picked Sheila Perry, N0UOP, of Bloomfield, Missouri, as the 1993 Professional Educator of the Year.

Rick Campbell, KK7B, of Chassell, Michigan, was selected at the winner of the Technical Excellence Award for his article, ''High-Performance, Single-Signal, Direct-Conversion Receivers,'' appearing in the January 1993 issue of QST.

The Board tabbed Len Winkler, KB7LPW, of Phoenix, Arizona, as the recipient of the Philip J. McGan Silver Antenna Award, which recognizes outstanding achievement in the public relations arena. The Board thanked all Amateurs for their public relations efforts.

The staff was commended for developing and implementing strategies for responding to the 13-cm band challenges posed by the government reallocation plans.

The Board noted the selection of ARRL Technical Relations Manager Paul Rinaldo, W4RI as a member of the US delegation to ITU Plenipotentiary Conference, and congratulated him for his excellent service as an international representative of Amateur Radio.

The Contest Advisory Committee will study the possibility of expanding the scope of the 10 GHz contest to include all bands above 10 GHz, and report back to the Board at its 1995 Annual Meeting.

The Contest Advisory Committee will study the possibility of adding a club competition to all VHF/UHF contests and sprints. The committee will also consider establishing a Summer Sprint series.

The Board selected Peoria, Illinois, as the site of the 1996 National Convention. The convention will be held September 13-15 under the sponsorship of the Peoria Area Amateur Radio Club.

Dallas/Ft. Worth was selected at the site of the 14th ARRL Digital Conference to be co-sponsored by the Tucson Amateur Packet Radio Corporation (TAPR) and the Texas Packet Radio Society in September 1995.

The full story of the Board meeting will appear in September QST.

Cross-posted to: rec.radio.amateur.equipment,comp.dsp,rec.radio.amateur.misc

I am not sure if this is the right group. No harm trying.

I have a 27MHZ clock signal connected to a PC card. The problem is that the ground plane of the PC card shows a 20millivolt signal which wrecks other amplifier circuits on the board. I am using a coaxial cable. Any clue as to how I can keep the ground plane clean.

This version can also send through your Sound Blaster card. If you
have the Sound Blaster information set up properly in your autoexec.bat
file (RTFM), you can set things up through the Options and Misc menus.

: i had heard a rumor that the fcc has taken action against some of the
: users of 145.735 ... anybody know whether that is so and what actions were
: taken?

The only convicted ham on 435 convicted was Richard Burton. The only
reason he got nailed is because he messed with the wrong people: the DX club.
There are others far worse than burton ever was, like KD6KEK & KD6NBD to
name a few. They havent heard a peep from the FCC.
Dont forget 'community standards'. If the community standards are in
the gutter, then maybe its ok for some to be in the gutter. As long as
they dont take your repeater into the gutter.
If I didnt have a job or a life then maybe I could be a windbag on
435, but fortunately I have better things to do.
One thing you sure cant debate: 435 sure has an audience.

I almost forgot... down with the CKK remote.

I've kept most of the articles in that particular thread; so I'll forward them directly. If anyone else wants info, just send me an e-mail request.

Bottom line: I took a power supply that had not run in years; put it on a variac and brought the voltage up in 10 volt steps - each step was 3-4 hours or so. Then, at the end of a couple two or three days, I plugged in the linear amp and thru the high voltage switch. Voila - it works.

From: levin@cosmic.physics.utah.edu
Message-ID: <1994Jul19.045712.2570@math.utah.edu>
Source record: 263136

Hi,

I am looking for information on how to build a serial cable
for my Kenwood TS-50. Kenwood wants $100 and MFJ is now
selling one for $50. After saving for over a year for the radio
I really can't spend even $50. Since MFJ is making one, it can't
be too hard. If anyone can tell me how, I would really appreciate
it. Also, if possible I would like to know how to talk to the radio
after building a cable. Does anyone have this information?

Please respond by e-mail so that I can summarize for everyone else.
Also, my news feed only works occasionaly and I might miss a general
response.

My address is: levin@cosmic.physics.utah.edu

Thanks in advance.

-Chris Levin

I've been listening around the HF band trying to see if I can hear any of this Jovian activity currently going on. I recently read a post (somewhere) that described what Jupiter sounds like. I hadn't heard anything even nearing resemblance of the ocean-wave sound until today at 19:16 UTC.

BTW, today is 18 July. I looked at the clock after hearing the ocean wave sounds eminating from my Drake TR-7. The signals were very strong and only lasted about 30 seconds or so. My antenna is an inverted vee cut for 14.336 MHz (which is where I heard what I believe to be the noise generated by Fragment H of the Shoemaker-Levy 9 comet). The apex of my antenna is at about 30 feet and each leg slopes 45 degrees downward. [Duh!]

I have two copies of the impact time schedule; one I downloaded, and one printed in the local newspaper. I believe the newspaper schedule to be the more correct of the two and indicates the time impact would be seen on Earth if Jupiter were not in the way. Estimates were as of July 11 and includes a correction factor. Today's fragment had a correction factor of +/- 9.4 minutes. The schedule shows time of impact to be 12:25:55 p.m. PDT which would be 15:25:55 p.m. EDT (where I am located) [Duh!] Converted to UTC that would be 19:25:55. Considering the +/- 9.4 minute correction factor the actual time could have been anywhere between 19:16 and 19:35 (roughly)...

Did anyone else catch Fragment H today? I'll probably be sawing logs zzzzzzzz when Fragment K hits Jupiter but will be listening for L at around 3:07:07 p.m. PDT, 6:07:07 p.m. EDT = 22:07:07 UTC +/- 10.2 mins on 14.336 MHz, incidentally on the County Hunter's Net frequency. Yeah, I'm a CH.

Hearing the noises generated by a planet 480 million miles away is pretty intriguing if you ask me. Takes light 43 minutes to travel from there to here. Wonder how many Jovian Cloud Flyers have been wiped out? Maybe after it's all over with, they'll all be extinct and in dinosaur heaven...don't ya know.

: Jeff NH6IL

I was talking to my dad tonight and asked him if he remembers what those rubber strips were on old cars. He said they had braided metal wire in them, and that yes, they were for static discharge. I guess as the car is moving, the wind under the car would lift these strips up into the air, but that as the car stopped, they would touch the ground. I drive a VW Quantum and get shocked almost everytime I get out - kind of annoying.

I sent off for a demo disk for RadioRunner - a radio control, shortwave schedule/log, and greyline clock program. A partial demo was contained in "Greyline Clock" found in the Ham Radio Library on AOL. It was apparently downloaded sometime around 1991-1992. My letter to the Tujunga, CA address was returned as "forwarding order expired."

Does anybody
1) know the wherabouts of KE6FG software?(if it is still a live entity) and
2) any experience with this program (or something similar) and have any recommendations?

I am trying to control an ICOM 735 via a Macintosh SE-30 and use it mainly for SWL. Thanks a whole bunch in advance for your Email or newsgroup reply.

The 3-Hr Ap Indices for 17 JUL 94 are: 21 25 14 27 15 10 11 18
Greater than 2 MeV Electron Fluence for 18 JUL is: 1.5E+09

SYNOPSIS OF ACTIVITY

SESC Synoptical data is valid from 17/2100Z to 18/2100Z.

Solar activity was at low levels. Region 7758 (S12E66)
was assigned today. There was a C3/SF flare from new Region
7758 at 1331UT. The greater than 2 MeV electron flux has been
at high levels.

Solar activity forecast: solar activity is expected to be
at very low to low levels.

The geomagnetic field has been at quiet to unsettled
levels for the past 24 hours.

STD: A weak sudden magnetic impulse was reported by Boulder at
01:14 UTC on 19 July, measuring only 9 nT. The source is
uncertain.

Geophysical activity forecast: the geomagnetic field is
expected to be at unsettled levels.

Event probabilities 19 jul-21 jul

Class M 01/01/01
Class X 01/01/01
Proton 01/01/01
PCAF Green

Geomagnetic activity probabilities 19 jul-21 jul

A. Middle Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

B. High Latitudes
Active 10/10/10
Minor Storm 05/05/05
Major-Severe Storm 01/01/01

HF propagation conditions were normal over all regions.
Isolated and localized periods of minor signal degradation
may have affected some high-latitude regions early in the UTC
day. Near-normal to above-normal propagation is expected over
the next 3 days, through 21 July inclusive.

NOTES:
All times are in Universal Time (UT). Characters preceding begin, max,
and end times are defined as: B = Before, U = Uncertain, A = After.
All times associated with x-ray flares (ex. flares which produce
associated x-ray bursts) refer to the begin, max, and end times of the
x-rays. Flares which are not associated with x-ray signatures use the
optical observations to determine the begin, max, and end times.

Acronyms used to identify sweeps and optical phenomena include:

II = Type II Sweep Frequency Event
III = Type III Sweep
IV = Type IV Sweep
V = Type V Sweep

Continuum = Continuum Radio Event
Loop = Loop Prominence System,
Spray = Limb Spray,
Surge = Bright Limb Surge,
EPL = Eruptive Prominence on the Limb.

Oops, I was a little confused. KE6FG software was listed in Ham Radio for the Macintosh as a control program for ICOM radios. This is the letter that was returned. I haven't received the demo disk for RadioRunner yet (it hasn't been that long) but it is published by another company.

I still would be interested in the wherabouts of KE6FG Software or any experiences anyone has with remote controlling ICOMS with Macs.
Thanks.

I'm entirely agreeing with Bill here. As an ARRL member myself,
a General Class amateur licensed for 7 months, intrested in the
hobby for alot longer than that, a member of the local ARES/RACES
organization, emergency responder, and other applicable positions,
I thing that there is nothing wrong with this hobby, it's regulation,
and examination and licensing procedures except for the time it
takes to get your license.

This hobby is well-patrolled with "radio cops". Our local repeater
has a person on top of the bootlegger about 5 minutes after (s)he's
on the air. We also have one of the best DF'ers in the country right
in our area who tracks down many-a-jammers. The Volunteer
Examiner program is one that releives the burden off of the FCC
and makes OUR job of getting a license easier by not having to
hike it 20 miles to the nearest FCC Field Office.

Whatever your problem with the hobby is...get over it.

Yes, and it works quite nicely. The CD player in my XYL's car has a "Walkman jack" (you guessed it -- it's a Sony!) into which I patch an HT when we go on trips.

I've installed a trunk-lip antenna mount, some velcro straps on the underside of the trunk lid to keep the coax stowed neatly when it's not in use, and a length of PVC with rubber plugs (also secured to a trunk wall with velcro) in which to stow the antenna element. With an 1/8" phone plug patch cord and a cigarette lighter power cable stored in the glove box, all I have to add is an HT and operating from her car is almost as easy as it is from the mobile rig in my car. Set-up time is about two minues (of course the fold-down rear seats in Madzas that provide easy access to the truck compartment from inside the car significantly simplifies set-up.)

The geographic name server at the University of Michigan will help you
convert zip codes to great circle coordinates, which you can then convert to
Maidenhead grids. For example:

```
netcom% telnet martini.eecs.umich.edu 3000

Connected to martini.eecs.umich.edu.
Escape character is '^]'.
# Geographic Name Server
# Copyright 1992 Regents of the University of Michigan.
# Version 8/19/92. Use "help" or "?" for assistance, "info" for hints.
.
95060 <--- my zip code
0 Bonny Doon
1 06087 Santa Cruz
2 CA California
3 US United States
F 45 Populated place
Z 95060

0 Santa Cruz <--- my city
1 06087 Santa Cruz
2 CA California
3 US United States
R county seat
F 45 Populated place
L 36 58 27 N 122 01 47 W <--- my great circle coordinates
P 41483
E 17
Z 95060 95061 95062 95063 95064 95065 95066
```

Hope this helps...

This isn't exactly right, Joe. The restriction on third party communications
with unapproved countries only holds when one of the stations is in that
country. It's routine on the HF packet nets to route traffic for a
station in a country with which we don't have a third party agreement
via a station in a third country which has third party agreements with
both countries. The FCC only cares about the immediate pair of stations
doing third party traffic, not the ultimate origin or endpoint of traffic.
However, content rules do apply, so gateway operators screen for language
and commercial content.

Yes, a trick to *temporarily* fix shorted NiCads is to charge a capacitor
to a high voltage, say 100-200 volts, and zap it across the NiCad. It'll
often burn away the dendrite that's shorting the cell and let it work again.
The dendrites do come back, so it's only a temporary fix. Don't do this to
a pack, do it to individual cells.

Well, the long wait is over. When I got home yesterday, I found the magical letter from the FCC, with the callsign N2ZKE.

For those who are waiting:

Test taken: Apr 10, 1994, Licence Issued: July 13, 1994, Licence mailed: July 15, 1994, Licence Received: July 18, 1994. Total time to receipt, 14 weeks and two days.

Also, the callsign indicates that the rate of issuing licences has stepped up. Based on past history, I was expecting something in the N2Z[A-D]xx category, but it went to N2ZK.

This isn't meant as a flame in any way, just a suggestion that there
is too much "strict interpretation" as to exactly what the rules are
and how they should be applied. If you apply the above (97.115) in
such a strict fashion, you'd also have to say that I shouldn't be
allowed to read a letter to another ham during a QSO (where both I and
the other ham are both in the USA)
and where the letter I recieved was from a third party in one of those
countries that didn't have an agreement with the US. Frankly, such a
strict interpretation goes farther than I believe the rule was meant to
prohibit. Remember too, the Internet message may have originated anywhere,
but that's (in my opinion) no longer relavent when the message is
taken off the local node. At that time, the information transfer
is wholly domestic and doesn't involve international radio transfer
of messages which is the only thing that 97.115 addresses.

Remember too that the USA (i.e. the FCC) doesn't care about third
party traffic and that the basis for 97.115 is really to alert US
hams that they should respect the no-third party rules of other
countries. After all, in the event that a US ham violated 97.115, who would
be the complaining party?

So, let's enjoy the hobby. Let's certainly be aware and respect the
FCC rules, but let's not get so bogged down in minutia that we see
prohibitions at every turn.

1015. Digest of Articles - QST Apr 94 (Long - 46k)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-19 13:26:48 UTC
From: wvanho@infinet.com
Message-ID: <30gkao$98e@rigel.infinet.com>
Source record: 263147
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

DIGEST OF ARTICLES - QST April, 1994

Following are digests of articles printed in the April, 1994 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically. Subsequent issues will be posted one per week until they "catch up" to the current date in mid-1994, thereafter monthly.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Build Your Own LOWFER Transceiver
Author>Curry, David - WD4PLI
Source>QST Apr 94, pp. 26-31
Abstract>Operating in the 1750-meter band which does not require a license. Power input is limited to 1.0 watt and the antenna must not exceed 15-meters in length (49-feet), including feeder. Range of up to 200 miles is possible. Includes construction information for a suitable transceiver.

Digest>The subject of this article is the 1750-meter (160- to 190-kilohertz) band which is not, strictly speaking, an amateur band; it is open to all without the need of a license. Transmit input power is limited to 1-watt. In addition, the transmitting antenna is limited to a total of 15-meters (49-feet) in length, including the feedline.

Mr. Curry indicates that almost any kind of an antenna will do if one wants to transmit no more than one mile (1.6 km). If "DX" operation (several, to as many as 200, miles) is desired, a resonant vertical antenna is necessary. He recommends a vertical made of aluminum tubing with a 12-foot (3.5 meter) diameter "top-hat".

For resonance, a large diameter, multi-turn loading coil must be attached at the base and a minimum-length coax feedline should be tapped across the first few turns. The coil should be close-wound of number 18, or larger, enameled wire on a 6-inch (15-cm.) diameter form. The total number of turns should be determined by experimentation to establish resonance at the desired frequency.

The author provides a schematic diagram and construction details for a complete transceiver, which he calls "Model 893". It uses 6 integrated circuits, including the voltage regulator; receiving-type variable capacitors, and several dozen other electronic parts, all readily available from sources listed in the article. He also recommends a low-pass filter for the input from the receiving antenna to minimize reception of noise and interference from strong broadcast band, and other local signals.

On the 1750-meter band, common practice is not to use full amateur call signs. Three- or four-letter combinations are usually adopted; many hams use the first and last two or three letters of their calls.

A kit of all parts except the enclosure and knobs is being offered by the author for a price of $94.00, including USA shipping. With the kit comes a manual detailing the construction, and also information about antennas, and operating hints. For further general information, he

suggests that interested parties might want to join the Longwave Club of America, 45 Wildflower Road, Levittown, PA 19057.

Title>TA2:A Trigonal HF Beam
Author>Bird, Dick - G4ZU/F6IDC
Source>QST Apr 94, pp. 34
Abstract>Describes a switchable beam antenna made of wire. It is comprised of 3 dipoles with a common parasitic reflector behind them. The radiation pattern has 3 switchable lobes, 120-degrees apart.

Digest>In this article, Mr. Bird shows the construction of a switchable beam antenna made of three dipoles aligned as the legs of an equilateral triangle, with a common reflector behind all three. The beam is switchable to three different directions, spaced 120-degrees apart around the azimuth.

To understand the arrangement of the wires, it is necessary to draw an equilateral triangle. Then, from each apex toward the mid-point of the opposite side, draw a line. If done properly, the three lines will meet at a common point at the center of the triangle. Of each of the lines just drawn, erase the portion between the common center point and the center of the respective side.

Now, three lines join at each apex of the triangle. Draw an insulator in each of the three lines close to, but not touching, the apex. Also draw an insulator in the center of each side of the triangle. The drawing of the plan view of the antenna is now complete.

Feeders lead to each of the three center insulators in the sides, representing the dipoles. The "Y" made up of the three wires that join at the center is the "trigonal" reflector which directs the beam of each of the three dipoles, whichever is excited.

On the 20 meter band, the author used a dimension of 33-feet (10.06-meters) for each dipole; each leg of the "Y" was 17-feet, 10-inches (5.44-meters), measured from the center to the insulator; the total distance from the center point of the triangle to each apex is 19-feet (5.79-meters). Those dimensions, in feet, can be calculated for any frequency by dividing a number (N) by the frequency in MHz, as follows:
For the length of the dipole, N=468
For the length of each reflector arm, N=252.7
For the total distance from center point to apex, N=269.1
To convert feet to meters: 1-foot = 0.3048 meters.

Accompanying the article is a plot of the radiation pattern of the antenna on 20-meters when it is mounted 25-feet (7.6-meters) above average ground. It shows a rounded cardioid pattern with good directivity and excellent front-to-back ratio. The author reports that he built such an antenna that showed a measured forward gain of nearly 9 dBi and a FB ratio of more than 34 dB. The antenna analysis performed

using "Elnec" antenna software indicates about the same amount of forward gain, but a FB ratio of between 22- and 25-dB, which is still quite respectable for even a 3-element Yagi although this is only a 2-element design.

Title>TA3:A Function Generator With a Frequency-Counter Digital Readout
Author>Spencer, Ben C. - G4YNM
Source>QST Apr 94, pp. 35-39
Abstract>Construction of an audio-frequency function generator with integral frequency counter. Functions available are sine, square, and triangular waves.

Digest>One of the most important items of bench test equipment required on an experimenter's workbench is an audio-range function generator capable of generating signals of various waveshapes, including especially sine and square waves. Mr. Spencer has designed and built a versatile unit capable of generating those two, plus triangular waves, over a frequency range of 10-Hz. to 80-KHz. For sine and triangular waves, the range extends to 100-KHz.

The function generator circuit itself is contained in a single integrated circuit. In addition, a dual op-amp chip contains the remainder of the active elements. The addition of a couple dozen resistors, a few capacitors, and some switches completes the entire instrument.

The frequency counter is contained on a separate PC-board and uses 6 decade-counter chips, 3 dual-digit LED displays, and a few other components. The power supply is built on a third PC-board, and produces +12 and -12 volts regulated output.

The author estimates that a constructor can probably duplicate the unit for a total cost of $50, including enclosure. Final adjustment requires a voltmeter and an oscilloscope. The article includes full instructions.

No complete kit of parts for this project is available, although a set of three PC-boards, etched and drilled can be obtained from FAR Circuits, 18N640 Field Court, Dundee, IL 60118-9269. The price is $17.50, including domestic shipping. A PC-board template package is available from the ARRL for an SASE. Address the request to Spencer Function Generator Template, Technical Department Secretary, 225 Main Street, Newington, CT 06111.

Title>TA4:The RingMaster
Author>Rumbolt, Robin - WA4TEM
Source>QST Apr 94, pp. 40-42
Abstract>The advent of "Caller ID" by telephone companies defeats private repeaters' secret telephone numbers. Described is a device that uses the "RingMaster " (TM) service, also available from phone

companies, to restore privacy to the private repeaters.

Digest>The device described by this article was designed to overcome a severe problem that was occasioned by the introduction, in some areas, of "caller ID" by the telephone companies. Caller ID allows anyone who subscribes to the service to be able to see the phone number of the telephone where the incoming call originates. This seemed to represent a disaster for repeater operators who use secret phone numbers known only by members of the club supporting it. In its basic form, it would seem to allow anyone with a Caller ID display to make autopatch calls to themselves and see the repeater phone number.

In some areas, Caller ID can be blocked by using certain call sequencing, but in the author's area, this is not allowed. What is allowed is a "RingMaster" (TM) service. This allows several telephone numbers to be assigned to one phone line. The ring timing differs depending upon the number used to call. Dialing the main number causes the phone to ring in the normal "2-seconds ON, 4-seconds OFF" sequence. With the three special RingMaster numbers, there are two additional special sequences.

The author has designed an electronic circuit that is programmed to answer only a ring using one of the special sequences, specifically sequence No. 1, which is "0.8-seconds ON, 0.4-seconds OFF", repeated continuously. If a would-be hacker should place a call to himself, the Caller ID would display the main number of the repeater, but not the special number. The repeater would not respond to the main number.

The circuit is assembled on a single PC-board. The input is electrically isolated from the phone line by an optoisolator and logic devices detect the proper sequence, which closes a relay that connects the phone line to the autopatch.

Title>TA5:The Elkhart County Tone Alert
Author>Drudge, Dennis A. - W9XD
Source>QST Apr 94, pp. 43-46
Abstract>Construction of an alarm system to operate in conjunction with an amateur repeater to provide tone-alert alarms of severe-weather situations.

Digest>In Elkhart County, northern Indiana, the organization that maintains the repeater decided to develop a tone-alert system to notify all members of severe-weather situations as they develop. They designed a very effective system which included the design of an alarm that all members were encouraged to build. Mr. Drudge describes the system and gives construction information in this article.

The system, in operation, responds to either of two 3-digit DTMF sequences, and also the Long Tone Zero (LiTZ) signal. The latter is a 3-second zero tone used as a universal distress call on repeaters, with the endorsement of the ARRL. When actuated, the system sounds an alarm

for 5-seconds, switches the received audio to a speaker, and starts an LED blinking.

A circuit diagram is included in the article. The logic is embodied in nine ICs plus a voltage regulator. They include a DTMF decoder chip, a 4- to 16-line decoder, and several logic chips. All parts required to build the unit are readily available from a number of sources, several of which are listed by the author. He makes available a "partial kit", made up of a PC-board, a DTMF chip, and a latching relay for $30.00, including domestic shipping. He estimates that the total cost of a unit, including a case, should be less than $50.00

For those who want to do the whole job themselves, a template package containing the double-sided PC-board pattern and parts overlay can be obtained from the ARRL Technical Department Secretary, 225 Main Street, Newington, CT 06111. Enclose a business-size SASE and request the Elkhart County Tone Alert System PC-Board Template.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:ICOM IC-707 MF/HF Transceiver
Author>Ford, Steve - WB8IMY
Source>QST Apr 94, pp. 75-78
Abstract>Performance review of ICOM's latest "entry-level" MF/HF transceiver.

Digest>This transceiver is ICOM's answer to the low-priced "entry-level" rigs that are now coming onto the market. It is a small unit that provides most of the functions that even the most sophisticated modern ones offer. However, to establish a low price, some functions must be omitted, and the reviewer discusses several.

The front panel is free of much of the clutter common on larger units, but all the essentials are there. There is a large Power rocker switch; also a very large and well-designed tuning knob, an RIT knob, an AF Gain/Squelch knob, and two tiny knobs for mike gain and r.f. power, respectively. Seven switches are to the left of the tuning knob: Tuner, RIT, Tuning Speed, Preamp/Attenuator, Mode, Noise Blanker, and Scan. The Mode switch steps through CW, USB, LSB, AM, and FM. On the right side of the tuning knob are four push-buttons that control the dual VFO and Memory functions.

The unit is well designed for mobile use; unique in its class, it has a speaker on the front panel facing the driver of an automobile. Jacks on the back panel are available to make connections for operating in digital modes, and also to drive an amplifier.

The reviewer pointed out a number of limitations, some of which are serious. Especially in CW operations, there are a number of annoying

features. One is the AGC; it is set either "Fast" or "Slow", and the settings cannot be adjusted. In "Fast", the attack is so slow that it makes moderate to strong signals annoying. Also, the CW tone is set at a fixed 800 Hertz, which is uncomfortably high for many experienced operators.

Digital modes are received in the SSB setting and the lack of narrow i.f. filtering is "painfully evident". The reviewer states that the manual suggests a "workaround" method of using the CW i.f. filter for digital operations, but it is clumsy, at best. In SSB operation, the reviewer missed having a VOX function.

The most glaring omission for the reviewer was the lack of a manually-operated transmitter switch. For a ham who uses a manual antenna tuner, it is necessary to switch the rig into continuous transmit mode while adjusting the tuner. In absence of such a switch on the front panel, the operator has to use the microphone push-to-talk switch, or hold the CW key down, while tuning.

In all other aspects of transmitting, the rig performed very well, indeed. Its frequency control is extremely stable, even from a cold startup. All reports on the quality of the audio were good to excellent.

The performance of the receiver was found to be good in testing. The noise floor, with a 500-Hz. i.f. filter in use, was between -120 dBm. and -138 dBm., depending upon frequency band in use. Dynamic range was 111 dB. to 128 dB.; 2-tone third-order IMD dynamic range was from 90 dB. to 87 dB.

To summarize, the reviewer said: "The IC-707 provides good basic radio performance for new hams and veterans alike, on a budget." The manufacturer's list price for the IC-707 is $1032, without power supply, antenna tuner, or any other optional features.

Title>PR2:Solder-It Soldering Kit
Author>Gruber, Mike - WA1SVF
Source>QST Apr 94, pp. 78-79
Abstract>A kit allowing anyone to solder together many different combinations of metals, including aluminum, stainless steel, and zinc.

Digest>This soldering kit is made up of a small butane torch and a collection of solder-paste syringes. The syringes are like hypodermic needles and each contains a paste made of soldering flux mixed with powdered solder. Each is designed for a different metal or combination of metals. To tin or solder, one spreads the paste on the surface to be wetted and heats it with the torch. First, the flux, then the particles of solder, melt and bond to the work piece.

Four different pastes are supplied. The Aluminum paste is, perhaps, of most interest to amateurs because of the great difficulty of soldering aluminum. The reviewer found that he had good results soldering aluminum to aluminum, and also soldering aluminum to other metals such

as brass.

He found that he had to clean the surfaces to be soldered very thoroughly, using steel wool. He advises some practice on test pieces before undertaking a critical soldering job.

In summary, the reviewer was impressed and found that the kit enables one easily to solder "an unbelievably wide range of metals". The manufacturer is Solder-It, Box 20100, Cleveland, Ohio 44120. The list retail price for the soldering kit is 59.00. Replacement syringes are $6.00 each and a variety of tip attachments are also available.

Title>PR3:Radioware SSTV Explorer
Author>Pagel, Paul - N1FB
Source>QST Apr 94, pp. 80-81
Abstract>Describes a hardware/software package that allows any amateur with a transceiver and computer to receive SSTV.

Digest>The Radioware SSTV Explorer is a hardware/software package that allows anyone with an HF receiver and DOS computer to receive SSTV images. Nothing else is required!

The package is made up of a floppy disk (either 3.5- or 5.25-inch size), and a 60-inch cable. The cable is terminated with a DB-25 connector on one end and a 1/8-inch diameter, 2-conductor audio plug on the other. The DB-25 attaches to the computer's RS-232 serial port; the audio plug to the audio output of the receiver. That, plus a 27-page instruction manual, is all there is to it; the only electronic hardware required is on a tiny PC-board that is inside the DB-25 connector!

For good results, the computer should contain a VGA display board able to display at least 32,000 colors, and also a one-megabyte, or more, of video memory. Anyone equipped with that will be able to receive the full range of SSTV images now being transmitted on the HF bands.

The software is quite complete and allows one to receive, display, and save on disk, any images received.

The reviewer found the manual to be quite complete in giving full instructions concerning the use of the software. It enables one not only to capture and save the SSTV images, but also allows them to be edited. After they have been received, one can invert, mirror, rotate in 90-degree increments, zoom, remove all color, filter, and otherwise manipulate the images. The manual does not, however, contain any technical description of the hardware or software, an omission that the reviewer regretted.

The manufacturer is Radioware, 225 Stedman Street, No. 27, Lowell, MA 01851. The list price is about $50.00.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Adding a Noise Filter Can Be Worse Than No Filter At All
Author>Shelhamer, Mark - WA3YNO
Source>QST Apr 94, p. 82
Abstract>Describes a condition in which a noise filter inserted in the d.c. power leads, rather than eliminating it, actually causes an increase of electrical noise in a car.

Digest>The author relates that he had problems with electrical noise in his automobile AM/FM radio and, to try to eliminate it, he installed a commercial noise filter in the d.c. power leads. The result was a negligible improvement. Upon investigation, he found that the shield of the antenna coax was attached to the radio chassis ground at one end, and to the frame of the car at the other. He realized that the commercial filter blocks r.f. from flowing on either the positive or negative d.c. power leads. Hence, noise that otherwise would have been grounded through the negative d.c. lead was blocked and flowed through the coax shield instead. This, then, was capacitively coupled to the center conductor, and so to the antenna input of the radio.

When he removed the commercial filter and grounded the receiver ground directly to the negative battery terminal, the noise was greatly reduced.

Title>HK2:An R.F. Sniffer Meter
Author>Hoyt, Emerson - WX7E
Source>QST Apr 94, p. 82
Abstract>Describes a very simple but sensitive meter to detect the presence of r.f. energy in circuits.

Digest>Mr. Hoyt provides a schematic diagram, and also description, of a meter that he has used to detect the present of r.f. in circuits of all kinds, including antennas. It is built from a small microammeter with a germanium diode (1N34, or similar) attached to each meter terminal. The diodes are installed with polarity such that, if any current flows, it will tend to drive the meter upscale.

He attaches a length of No. 18 bus wire, about 2-inches long, to the free ends of both diodes, then twists them and solders them together at the outer end to form a probe. He slips a piece of insulating tubing over the leads, leaving only the tip exposed.

He finds that this meter is a very sensitive detector of r.f. of any frequency.

Title>HK3:Curing R.F. Noise in a Fluorescent Shop Light
Author>Lee, Mitchell - KB6FPW
Source>QST Apr 94, p. 82

Abstract>A bypass capacitor cures noise from a fluorescent light.

Digest>Mr. Lee found that a new shop light in his home caused tremendous noise that appeared on all HF bands from 160-meters, up. He eliminated almost all the noise by bridging a 0.22-mfd. metallized-film capacitor, rated for use on 125-volt a.c., across the power lines at the point where the cord enters the fixture.

Title>HK4:Speaker Connectors as Power Terminals
Author>Bauer, Jeff - WA1MBK
Source>QST Apr 94, p. 82
Abstract>Speaker connectors can be used as d.c. power connectors.

Digest>Spring-loaded speaker terminals were noted in Hints and Kinks, December, 1987, as good for plugging in crystals. Mr. Bauer also finds them useful as light- to medium-duty d.c. connectors.

Title>HK5:A Spinner for Kenwood Tuning Knobs
Author>Nollet, Kenneth E. - K0EN
Source>QST Apr 94, pp. 82-83
Abstract>How a bent wire can convert a standard Kenwood transceiver knob into a spinner-knob.

Digest>The author uses a Kenwood transceiver, yet likes the type of tuning knob used on ICOM gear, among others, that provides a shallow hole in the face of the knob into which the operator can poke a finger and use it as a spinner. He fashioned a comparable spinner out of a piece of plastic-coated, heavy-gauge aluminum wire. He bent the wire into a small circle to act as a finger hole, then extended the length just far enough that it could be bent over the edge of the knob as far as the set-screw hole, and stuck it into that hole. When he bent the wire to form a snug fit over the knob, it held itself in place and acted as an effective substitute for the hole cut into the knob itself.

Title>HK6:Using Computer Graphics for Equipment Construction and Repair
Author>Whitsitt, Ronald V. - N5JSC
Source>QST Apr 94, p. 83
Abstract>Using common computer software to prepare labels for "homebrew" projects.

Digest>Applying printed labels to the face of "homebrew" projects is always a problem. Mr Whitsitt gets good results using his computer and a laser printer to print appropriate labels on paper, He states that almost any "paint" program running on a PC will be able to print lettering, as well as arcs for meter scales, etc., to form attractive labels.

After the label is printed on paper, he covers the paper with Scotch Magic Tape (TM). Then he cuts it to size with a hobby knife and glues it onto the equipment using rubber cement.

Title>HK7:A Handy, Padded H-T Case
Author>Norman, Nona M. - N8CKS
Source>QST Apr 94, p. 83
Abstract>A padded oven mitt works well as a case for an H-T.

Digest>Ms. Norman needed a padded holder for carrying an H-T in her briefcase. She discovered that a padded oven mitt, commonly sold in houseware stores, can be used as is, or else trimmed to shape and resewn, to do the job. For sewing, turn the mitt inside out, sew the edges around the desired shape, and trim off the excess.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Associate Technical Editor

Title>TC1:Automatic Antenna Tuners for Wire Antennas
Author>Belrose, John S. (Jack) - VE2CV
Source>QST Apr 94, p. 84
Abstract>Even though an antenna tuner may be able to tune a short whip to resonance at a low frequency, it will not be an efficient antenna. A high-Q, base-mounted loading coil will be much better.

Digest>This letter is a commentary on the article by Jeff Bauer, WA1MBK, reviewing the SGC, Inc. "Smartuner" automatic antenna system tuning unit (ASTU) in QST Nov 93. In it, Mr. Bauer noted that he was able to tune a 15-foot piece of wire on 160-meters and expressed the opinion that as little as 8-feet of wire could be used for frequencies above 3.3-MHz., "making a 102-inch CB mobile antenna More Than Sufficient for multi-band mobile use".

In this letter, Mr. Belrose points out that such an antenna would be extremely inefficient, largely due to losses in the ASTU itself. He reports a series of tests which show a graph of the effective output vs. frequency over a range of 2- to 13-MHz. for a 20-foot whip antenna used in two different configurations. The first configuration is with a large, high-Q, base-loading coil, and the other is with the same antenna mounted on a boat with an ASTU inside the cabin. A third antenna, a small diameter transmitting loop, is also plotted for reference.

The report shows that the 20-foot whip with a proper base-loading coil will deliver a signal only about 4-dB. below that of an isotropic radiator. The same whip operated with an inside ASTU, on the other hand, produces a signal that is more than 15-dB. below isotropic. When he scales the results to estimate the performance of a 102-inch CB mobile antenna on 80-meters, he finds the result to be off the scale of the graph at a level of more than 20-dB. poorer than isotropic. The curve for the small transmitting loop shows performance between the two configurations of the 20-foot whip.

Mr. Belrose also shows that any capacitance to ground in the antenna circuit between the ASTU and the radiator, itself, is a source of substantial loss of signal. Even the capacitance across a feedthrough insulator and a base-mounting insulator loses considerable power if it is between the tuner and the radiator. Only when the loading coil is a part of the radiator, itself, are those losses eliminated.

Title>TC2:Sniff! Sniff! I Smell Line Noise!
Author>Thorington, Lloyd - N0RQU
Source>QST Apr 94, p. 85
Abstract>Describes a hand-held Yagi antenna used for locating the source of line noises.

Digest>This letter describes a portable 3-element Yagi antenna built by the author for use in locating the source of line noises of various types. It is designed to operate at about 130-MHz. It is constructed of a piece of wood with 3 commercial "rabbit ears" TV antennas, spaced appropriately as the driven element, reflector, and director of a 3-element Yagi. The elements collapse against the stick for carrying, but when opened up, very effectively identify the source of arcing atop poles, or other noise-makers on power lines.

LAB NOTES (LN)
Conductor: Steve Ford - WB8IMY
Asst. Technical Editor

Title>LN1:Where Am I?
Author>Gruber, Mike - WA1SVF
Source>QST Apr 94, pp. 86-88
Abstract>Description of Latitude/Longitude and grid locator position-measuring systems.

Digest>This article is written in the form of questions and answers. It is a fictitious conversation between a ham asking questions and an unnamed authority providing the answers. It explains how the earth is divided by latitude and longitude designations, and also by the world grid locator system.

The world of ham radio was divided into "grid squares" of the Maidenhead Locator System at a meeting of hams in 1980. Each grid square is one degree of latitude by two degrees of longitude. Grid squares are indicated by two letters, dubbed the "field", and two numbers, called the "square". The squares are further divided into subsquares by the addition of two letters after the grid square. The subsquares measure 2.5-minutes of latitude by 5-minutes of longitude. Various ARRL publications and computer programs allow one to find the grid square and subsquare for any location in the USA.

Very precise maps of the entire United States, which include elevation above sea level as well as geographic features down to individual

houses, in some cases, are published by the U.S. Geological Survey (USGS). They are called Topographical Maps and can be obtained from the USGS Map Distribution, Bldg. 810, Box 25286/Denver Federal Center, Denver, Colorado 80225. They can also be found, along with an index, in many public libraries.

NEW HAM COMPANION (NHC)

The New Ham Companion is a regular section of QST. It features articles of primary interest to newcomers to the hobby.

Title>NHC1:Packet Without Computers
Author>Wolf, Fred - N3CSL
Source>QST Apr 94, pp. 64-65
Abstract>Using a "dumb terminal" for packet operation, instead of a computer.

Digest>This article points out that a computer is not an essential part of a station that can communicate via the packet mode. It is entirely possible to operate a packet station with a "dumb terminal" instead of a computer. Very large numbers of terminals were built and used to communicate with central computers in office settings before personal computers (PCs) became common on most desks. Many are now surplus and available for low prices.

The author describes an amateur packet station using a terminal, a terminal node controller (TNC), and an amateur transceiver. The transceiver can even be an H-T.

A station so equipped will be able to send and receive packet messages as well as any. There are certain other desirable functions, however, that require a computer. Among them are recording, editing, and manipulating the text, driving a printer to print the messages on paper, and others.

Title>NHC2:The Doctor is IN
Author>Various
Source>QST Apr 94, p. 66
Abstract>Questions and answers of interest to newcomers.

Digest>The questions discussed this month include: how to obtain copies of obsolete software that the manufacturer no longer supports; the proper length of a 2-meter whip antenna; frequencies within a band on which it is legal to operate CW; use of foreign languages by American amateurs on radio; the fact that it is not legal to transmit amateur radio from a commercial airliner; problems in computer operation when a new board was plugged in; and how to use a Commodore 64 computer on packet mode.

Title>NHC3:An Indestructable Dipole for 10-Meters
Author>Bowles, Chester S. - AA1EX
Source>QST Apr 94, p. 67-68
Abstract>Construction of a simple and inexpensive 10-meter antenna.

Digest>This article is meant to demonstrate how simple it is to build an antenna for 10-meters. The author shows photographs and describes a dipole that he built using 1/2-inch (12-mm.) galvanized steel electrical conduit, a wooden dowel for an insulator, and hose clamps to attach the two conductors of the coax cable feedline. He supports the antenna by attaching it directly to wooden supports, without insulators. Presumably, he only operates it in dry weather!

In a sidebar, Steve Ford - WB8IMY, points out that the 10-meter band is not completely dead, even though sunspot activity is approaching the minimum. He advises that anyone interested should scan the band, especially from late morning through early afternoon hours. Even at the bottom of the sunspot cycle, there will be sometimes when contacts are possible on the band, even DX.

Title>NHC4:A Climatological Analysis of the Dayton HamVention
Author>Friedman, Neil D. - N3DF
Source>QST Apr 94, p. 69
Abstract>Weather conditions at Dayton HamVentions are almost always bad!

Digest>The Dayton HamVention is the world's largest gathering of hams and is held yearly in Dayton, Ohio, at the end of April. Many thousands of hams come from all over the world to view the exhibits of equipment, which are held inside arena buildings, and also to browse the enormous flea market which occupies every space of the large parking lots that surround the facility.

Because the paved parking lots are entirely occupied, many visitors park in temporary "lots" in the surrounding area that are actually open fields. Year-after-year, visitors have come to realize that the weather conditions in Ohio in late spring are characterised by wide swings in temperature and frequent rainfall, often heavy. Old-timers tell many tales of parking lots that turned to seas of mud, stranding many cars; drenching rainfall accompanied by winds that blew down canopies and tents; and of other such calamities.

The author has made a study of the climatological records and presents bargraphs showing the range of temperatures and the frequency of rainfall for each day of every HamVention that has been held for the past 20 years. His information shows that in only four years of the twenty did no rain fall during any of the three days. In only one year did rain fall all three days; but rain fell in two out of the three days about one-third of the years and at least on one day in the rest. Temperatures have ranged from 30 degrees F. (-1 degree C.) to almost 90 degrees F. (33 degrees C.).

The author presents the information without stating any conclusions except that he intends again to be present this year, and that he plans to have with him clothing suitable for almost any conceivable weather condition.

Title>NHC5:The SWR Obsession
Author>Ford, Steve - WB8IMY
Source>QST Apr 94, pp. 70-72, 74
Abstract>There is no value in reducing SWR below certain levels, depending on frequency and type of feedline.

Digest>In this article, the author attempts to put Standing Wave Ratio (SWR) in proper perspective; and also to compare the two basic kinds of feedlines in common use: open-wire and coaxial cable.

Many hams make a fetish of obtaining SWR as close as possible to an exact 1:1. Usually it is a waste of time to struggle to lower an SWR much below 2:1 because the reduction of energy loss in the feedline to be accomplished would make a negligible difference in the perceived signal strength at the remote receiver.

The author gives five hypothetical examples to illustrate typical examples of performance. All show that antennas fed with coax perform poorly when the SWR is high, even at HF; and that VHF/UHF antennas show severe losses with long runs of coax, even with low SWR. Open-wire lines, on the other hand, provide high efficiency with either long runs or high SWR, or both.

Title>NHC6:Do I Need a Linear Amplifier?
Author>Aurick, Lee - W1SE
Source>QST Apr 94, pp. 73-74
Abstract>Do not spend money on an amplifier until every other means of improving signal strength has been used.

Digest>In this article the author takes a hard look at the benefits, versus the cost, of a linear amplifier in a hamshack. If an existing station radiates 100-watts, an amplifier can be added to boost that power to from 400-watts up to the 1500-watt legal maximum. If, in a given QSO, one receives a signal report of S-7, boosting the power to 400-watts would raise the strength to about S-8; going to the full legal limit would raise it to S-9.

The cost of a 400- or 500-watt amplifier (new) would be of the order of $800 to $1500. To go to 1500-watts, the cost would be $2500 to $5000. Individual hams must make up their own minds concerning whether the benefits to be obtained are worth the cost. No ham should commit to an expensive amplifier until other means of increasing signal strength, such as better antennas, have been thoroughly considered.

RADIO TIPS (RT)

These are short items, scattered among the articles in the NEW HAM COMPANION section.

RT1:The 10-Meter Band Plan
Author: Anonymous
Source: QST Apr 94, p. 68
Abstract: Recommended frequency allocations.

Digest: Frequency Service
28.000-28.070 CW
28.070-28.150 Digital modes
28.150-28.190 CW
28.190-28.200 New beacon subband
28.200-28.300 Old beacon subband
28.300-29.300 Phone
29.300-29.590 Satellites
29.600 FM Simplex
29.610-29.690 FM repeater outputs

FM Repeater Pairs: (input/output)
29.520/29.620
29.540/29.640
29.560/29.660
29.580/29.680

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Operating Backpack Portable
Author>Andera, Jim - WB0KRX and Sample, Bill - N0IET
Source>QST Apr 94, pp. 21-25
Abstract>The pleasures of taking radio gear along on hikes and climbs.

Digest>The two authors are midwesterners and enthusiastic outdoorsmen, fishermen, hikers, and campers. They are also hams and enjoy taking radio gear with them on their backpacking hikes through the hills and mountains of the midwest and west.

Title>GI2:Reading Radio Fiction
Author>Lisle, Larry - K9KZT
Source>QST Apr 94, pp. 51-53
Abstract>A brief review of fiction written about radio operations.

Digest>This is a description of some of the fiction that has been published about radio, or people involved in radio, down through the years. The author states that it was largely fiction that kept him interested while learning the rudiments of radio when he was young. He concludes by suggesting that any radio club that has a program for newcomers, especially teenagers, might well include some fiction to excite their interest.

Title>GI3:Digital Signal Processing: The Final Frontier
Author>Moseley, Robin - WA3T
Source>QST Apr 94, pp. 54-55.
Abstract>April Fool's Day fiction.

Digest>Many years ago, every April issue of QST contained an article written by the "famous inventor", Larson E. Rapp (pronounced: Larceny Rap). Each of these was a description of a new "invention" which started out as a reasonably credible statement of fact and observation. As the story went along, it became more and more unlikely until it finally ended with a preposterous mechanism or circuit that performed miraculous things, often repealing the laws of Physics. This was QST's way of celebrating April Fools' Day!

The present article describes the use of digital signal processing (DSP), along with electronic neural networks, to build a machine that would take a skull, such as one from an archaeological dig, analyze the acoustic resonances in the bone, and use them to calculate what the actual face looked like when the skull was covered with flesh and skin.

There is no editorial comment that indicates whether the author, Mr. Moseley, is related to Larson Rapp. But whether or not he is of the same blood line, it is certain that he follows in the same tradition.

Title>GI4:Electromagnetic Fields and Your Health
Author>Overbeck, Wayne - N6NB
Source>QST Apr 94, pp. 56-59
Abstract>Whether or not fears of damage to humans from radio waves are valid, take reasonable precautions to avoid excessive exposure.

>the ground plane of the PC card shows a 20millivolt signal which wrecks
>other amplifier circuits on the board. I am using a coaxial cable. Any
>clue as to how I can keep the ground plane clean.

Ok, I'll take a stab.

First of all it sounds as if you have a mixture ofdigital and analog
circuits on this board. These circuits need to be isolated from each other as
much as possible. An analog circuit would be susceptible to a 20 mV level
whereas a digital signal would never be bothered by it.

Start at the source.

Be sure that the 27 MHz generator/oscillator/synthesizer has its VCC properly decoupled.
Generally a .01 or .1 uF capacitor from the VCC pin to ground will take care of
any high frequency decoupling. Be sure to keep the the cap leads short. .25 " will make a
difference.

Isolating the clock's voltage source from the rest of the voltage plane will keep the
noise conducted from the clock onto the VCC localized at the clock. This isolation can be
a small ferrite or inductor.

Decoupling and isolation should be done on every chip that this clock feeds for maximum
noise suppression.

You didn't mention if this was a multilayer board, but this should give you asomething to
start
experimenting with.

: possible cures to this problem?

Wayne,

I suspect #1 as well. In the winter I "ride" my bike on a trainer that has the fork attached and the rear wheel spins on a metal cylinder. Often I wear headphones to listen to the stereo over the noise of the trainer. Lo and behold, my ears would get shocked from static arcing from the headphones. I bet you are experiencing a similar same problem.

I just grounded my trainer/bike and the problem went away. Not sure how you could do that while riding!

1019. Elmers, please read

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-19 14:20:49 UTC
From: greg@netcom.com
Message-ID: <gregCt6yIq.KDq@netcom.com>
Source record: 263282

A few hours on the Novice bands the other evening convinced me that we're neglecting a critical area of training, and that is the area of sending intelligible CW. Not pretty, or perfect, mind you, but intelligible. I heard (but didn't answer) a number of CQ's where the 'CQ' sounded like N N M A, and the callsign absolutely couldn't be parsed. And felt bad about the poor frustrated newcomer on the other end who probably had no clue as to why his calls weren't being answered.

It was with some relief, when I got my PK232, that I found that my own straight-key sending could still be read by machine. I'd suggest that Elmers who have a multi-mode at their disposal hook their proteges up to it in local mode (pretty easy, the manual tells how), and have them send until the controller can read their sending. If the controller can read it (it can't read many perfectly readable fists), it is approaching textbook. By the way, don't sweat the spacing. These darn things can't be convinced to read/send the letters at 20 WPM, and open out the spaces to knock it down to whatever.

This is a hard problem. How do you tell someone that you can't read his fist, when you can't read his fist?

Greg

Can anyone on the Ottawa area help me? I am looking for more information
on the dual band bandpass filter that appeared in a TCA article a few months
back. Our University club was interested in the filter and would like to
have a building party in the near future. However, the article more or less
was about the building party rather than actually building the filter itself.
If anyone could e-mail me about the nice construction drawings, parts lists,
tools needed, etc., I would be greatly appreciated.

Thanks in advance!

More than 1-1/2 years ago, a close friend *paid* for an Atlas 310 when
it was still on the drawing board stage...to help "ATLAS RADIO" get
the financing needed to start up their production line.

Here is what George reports on the *performance* of the 310:

"I still have not received the radio!"

As far as my friend knows, this radio exists only as a photo in an
ad on page 66 of the August 1994 issue of CQ radio.

This may or may not be what you are thinking of. In the September 1993 issue of QST on page 23, there is a shaded box with the title, "Reconditioning Small Lead-Acid Batteries." It's kind of long, so I wasn't going to type it unless you really needed it. The basic concepts though are to apply a large amount of voltage in the correct polarity untill it to start charging - 50 volts on a six volt battery. He does say that you should do this when you are there, or else put on a "sutiable resistor in the charging circut to prevent excessive current if the battery came "alive" when [he] wasn't around." The author goes on to say that this might not work, but he has sucessfully applied charging voltage in reverse for about 30 seconds - allowing no more than 0.5 amphere of current to flow. This is actually suggested by some manufactures of lead-acid batteries. There is an explanation of why this works too. Once the current flow is started, it can be increased by repeated charging and discharging until the battery begins to act like a normal battery.

Hope this helps

I have in the past few days talked to about half a dozen new hams who
got their tickets in the past four or five days. Waiting periods ranged
from 9 to over 17 weeks. The FCC must have flushed a big buffer...

It seems much more likely that the FCC isn't going to see one dime of budget increase unless you tell your senator or representative that you are willing to have more of your taxes given to the FCC to get licenses processed faster, in which case calling your senator or representative just wastes the time of the person who has to answer the phone and then go digging through the pile looking for YOUR application, all at the expense of everyone who forgot to have their senator or representative make a bad situation worse.

And people wonder how the government got the way it is.

1041. Why isn't IONCAP free?...

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-19 20:18:15 UTC
From: kjones@spookey.eecs.wsu.edu
Message-ID: <Ct7F2H.74z@serval.net.wsu.edu>
Source record: 263176

Probably a stupid question, (i.e. along the lines of "Why do we have to
to pay income tax" etc...) But, I'll ask it anyway:

Why is not the source code etc... for IONCAP available to US citizens
for free, seeing as how their tax dollars went to pay for its
development (see quote below)?

> IONCAP: IONCAP, an acronym for IONospheric Communications
> Analysis and Prediction, was originally written in FORTRAN
> for a mainframe computer by an agency of the US government.
> This program is considered by experienced amateurs and
> professionals alike to be the most comprehensive and best... (stuff deleted)

Other software developed by the US government i.e. the CIA database of
rivers, lakes and streams is accessible at no charge. Why not IONCAP?

I know that "Nothing is free" and "Someone always pays" etc... But I geuss
I was interested if anyone had any further knowledge about how IONCAP was
developed and who benefits from its sale.

Thanks for any info...

Curious: "Technician Plus" is one of the *SIX* license classes listsed on
the new FCC Form 610. Wonder why they bothered if that class doesn't exist.

Another curiosity: no specific exemption is made in the rules regarding
the expiration of CSCEs for Tech+ hams - those too should expire in 365
days - but they don't.

1049. READ: Ham Radio Community Resources (Long)

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-19 21:44:02 UTC
From: robb873302@aol.com
Message-ID: <30hhf2$ois@search01.news.aol.com>
Source record: 263291

COMMUNITY RESOURCES IN HAM RADIO

Few people realize that a lot of VHF and UHF ham radio operating relies on community resources. What is a community resource? A community resource in ham radio is a service or equipment available to operators that can be used freely without cost.

Your local voice repeater is a community resource. Whether it be club or individually
owned, the repeater is available to all amateurs for their use. Some repeaters are
"closed" repeaters and are only available to a small group but most fit into the "open"
category. The hams that maintain these repeaters have invested their own time and
money to equip the station and keep it running. Most hams give little thought when
they key up a repeater to talk to their friends as to what it takes to keep supplying this
resource.

Many naturally take advantage of the situation and never give a second thought until
the repeater goes off the air. Equipment failure, lightning, and other events can cause a system to fail cutting off communications. This is when you tend to hear complaints
being shouted, "That darn repeater is off the air, AGAIN!". Little do people realize that it takes the effort of a few select people to climb up the hill late at night to do the repairs. These people give up their free time to keep this community resource going for all to enjoy.

Packet radio is full of community resources. Digipeaters, nodes, packet clusters, and
bulletin boards are all available for general ham use. Expensive dedicated computers, TNCs, and radio equipment comprise these stations. All this is unselfishly donated to the community resource pool for everyone to use. A lot of time is required to maintain these stations everyday, most of which is invisible to the user.

Another little recognized resource is the human resources. Our Volunteer Examiner
troops donate their time to bring new blood into the hobby through licensing exams.
Although they are "reimbursed" for their expenses, this payment is trivial compared to
what they contribute. Additionally, you have the convenience of having

hams who will
take the time to answer questions from others or who will offer to help new hams get
started. These folks generously offer their knowledge and experiences to all those that ask.

What can you do to contribute to our community resources? Well, join the club that
sponsors your favorite repeater or packet node. Your dues go into helping maintain the equipment as well as other things. Most clubs struggle along financially but have
dynamite repeaters or packet stations that the ham community would surely miss. The
costs of the club's services largely outweigh the small dues payment.

Or, just say "thank you!". A simple thank you to the person or club is always
appreciated. To some, this makes it all worth while when someone shows their
appreciation. Most folks don't do this for the recognition or credit. They just enjoy giving but still welcome a simple thanks once in a while.

Help out by being a Volunteer Examiner if you can. Many groups can always use the
extra help during exams and your offer will not be turned down. Help the kid next door
get on ham radio or help the new ham find some used equipment to start his/her
station. There are many ways to contribute to the cause.

Now that you realize what a community resource is, it is amazing how often we use
these resources without even thinking about it. This is a shame because nowadays
most people won't give you the time of day on the street but we have such an abundant supply of generosity in ham radio. Let's not lose what we have. It's always easier to keep the momentum going than to start from scratch. Do something!

Your comments and suggestions are welcomed. Please send email to:

Greg brings up a good point, and I have had the same trouble with some ham's fists. I don't know if it is getting "worse" with time, but it sure feels like it. There are many, many CW ops that I will pass by simply because their code is pretty hard to copy. I copy in my head, and it makes it tough to keep up when I continually revise my estimates of what was being sent :-). I personally make it a point of pride to send nice code, and welcome comments over on 7040, where I hang out, or up in the novice band when I move up there.

SB QST @ ARL $ARLB063
ARLB063 Legislation moves forward

ZCZC AG28
QST de W1AW
ARRL Bulletin 63 ARLB063
From ARRL Headquarters
Newington CT July 19, 1994
To all radio amateurs

SB QST ARL ARLB063
ARLB063 Legislation moves forward

ARRL's House of Representatives Joint Resolution 199 passed a major hurdle when key provisions were included in H.R. 4522, the FCC Authorization Act of 1994, during markup by the Telecommunications Subcommittee of the House Energy and Commerce Committee on July 14. Sponsored by Rep. Mike Kreidler (D-WA), H.J. 199 earlier gained 245 other Congressional co-sponsors as a result of hard work by the Amateur community.

The next step is action by the full Energy Commerce Committee, and then consideration on the floor of the House. Companion legislation awaits action by the Senate Commerce Committee. If the Senate bill differs from the House bill, an additional conference committee decision might be necessary before floor action.

The bill urges the FCC to ''continue and enhance the development of amateur radio as a public benefit by adopting rules and regulations encouraging the use of new technologies,'' and urges the Commission to make ''reasonable accommodations for the effective operation of amateur radio from residences, private vehicles and public areas,'' and urges ''all levels of government'' to facilitate Amateur Radio as a public benefit.

The bill provides for a one time ''vanity'' call sign fee of 150 dollar(s). The previous ''annual fee'' provision was deleted in favor of a one time application charge, staving off the threat of an annual fee for all amateurs. In addition, ARRL lobbied to ensure that the fees go to FCC rather than the Treasury.

The one time fee was a calculated decision. As a result of concern on Capitol Hill about deficit reduction, new bills must be ''scored'' by the Congressional Budget Office to determine budgetary impact. A bill stands a better chance of passing if the Congressional Budget

Office rules that it won't be an additional burden on taxpayers.
ARRL supported the 150 dollar(s) amount since it would generate sufficient revenue to offset new costs to FCC and would meet the ''revenue neutral'' criterion, without imposing any new fees on amateurs who keep their present call signs or who receive new ones issued routinely.

SB SAREX @ AMSAT $STS-65.017
SAREX Update/Keps 7/19

Greenbelt, MD July 19, 1994 at 22:30 UTC

The following Apollo-11 information was provided by Bob Inderbitzen, NQ1R, from the ARRL:

SAREX Apollo 11 Special Event

In commemoration of the twenty-fifth anniversary of the Apollo 11 mission, the STS-65 SAREX station on board the Space Shuttle Columbia will be operated as a special event station from 1713 UTC, July 19 until 1343 UTC, July 21. Unscheduled voice contacts will be made when the crew is available.

The SAREX station joins at least 12 other amateur stations associated with the National Aeronautics and Space Administration in commemorating the landing of the Apollo Moon Lander, the Eagle, on the moon's surface in 1969. Contacts made during the event will be eligible for a special commemorative certificate. Please send your report and QSL with a large 9-inch by 12-inch self-addressed stamped-envelope to the ARRL Educational Activities Department, STS-65 Apollo Special Event, 225 Main Street, Newington, CT 06111.

SAREX operates split-frequency. The downlink, or receive frequency for all SAREX activities is 145.55 MHz. Please do not transmit on this frequency. The uplink, or transmit frequencies for voice are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. In Europe, the voice uplink frequencies are 144.70, 144.75 and 144.80 MHz. The worldwide packet uplink frequency is 144.49 MHz. Please, transmit only when the Shuttle is in range and on the air. Crew call signs for voice are Commander Robert Cabana, KC5HBV and Mission Specialist Donald Thomas, KC5FVF. The packet call sign is W5RRR-1. W5RRR is the call sign of the Johnson Space Center Amateur Radio Club which supports SAREX flight activities and hardware aboard the space shuttles.

SAREX Packet

The SAREX packet radio has been percolating along. At this point, the packet robot has exceeded the 2000 connect mark.

Shuttle Visual Sightings

Gil Carman, WA5NOM, reports a visual sighting of Columbia over Houston this morning on the 10:10z pass. It didn't come out of shadow until 6 seconds past peak, and went into clouds about 15 seconds later. The next couple of mornings should be better. Also, there should have a very good view of the

entry plasma trail Friday morning. The prime deorbit opportunity is still on rev 219, which will land at KSC about 10 minutes after sunrise there, and pass over Houston, over College Station and Huntsville at 10:31 UTC, an hour before local sunrise. That should give a plasma arc across the sky with a peak of about 15 deg as seen from Houston. Keep your eyes peeled!

Keplerian Elements

Gil Carman reports that Element Set GSFC-36A, provided by Ron Parise, WA4SIR, is still within 2 seconds of a current (orbit 174) state vector. This element set will remain the SAREX official set for today. This set is provided below.

STS-65
1 23173U 94039A 94199.34554466 0.00083772 00000-0 25331-3 0 366

Sounds like you want xntp3, the current implementation of the Network
Time Protocol. Check out comp.protocols.time.ntp and the files
available for anon FTP on louie.udel.edu in pub/ntp. I've not yet built
the more recent version on Linux, but much of the reference clock work
has been done for you already; even if you don't need the entire NTP
suite (it's nice to have good time) the already-written code may help.

Probably 145.25 instead. Don't know how FCC will like transmissions
in the 142 area. :-)

A large Northern Virginia organization is looking for entry level U.S. citizen communications engineers to work in analyzing HF through UHF communications systems. Resumes will be processed by the corporate personnel department in accordance with EEO policies and regulations. Please submit resumes (ASCII, UUENCODE, or RTF) to

C. A. La Varre
a.lavarre@ids.net
==========
STAFFING REQUIREMENTS REQUEST

Clearance Level: SECRET

New Position: Immediate
Project: Communications Engineering

Location: Arlington, VA

TITLE/LEVEL: Research Assistant/Consultant (A/I)

FUNCTION TITLE: Electrical Engineer (Communications)

JOB DESCRIPTION: Analyze radio and computer communications systems and design appropriate integration systems. Use established electromagnetic and circuit level theory. Apply modulation standards and protocols of the ITU-T Recommendations, IEEE/ANSI standards, and DOD MILSTDs, including elements of ITU-T V-series (V.22, 32, 42) and G-series. Design and implement graphical user interfaces for communications programs using C or Microsoft V- Basic. Perform communications tests and data collection. Write technical reports and performance analyses.

REQUIRED EXPERIENCE: Robust academic background in Electrical Engineering with a focus on radio communications. Practical experience in configuring transmitters, receivers, modems, antennas from HF through UHF, IBM-compatible PCs, MS-DOS, and Microsoft Windows. Practical experience with satellites, cellular, packet radio, and military or commercial telecommunications technical control facilities a plus. General or Advanced Class Amateur Radio License an asset.

SALARY RANGE: $25,000 - $35,000

EDUCATION REQUIREMENTS: BSEE. Robust academic background in Electrical Engineering with a focus on radio communications. Mathematics through Differential Equations, Probability Theory, and Introductory Statistics. Knowledge of Laplace, Fourier, and Z-transforms, Circuit Analysis, and Electromagnetic Theory a must. Data Communications and Communications Theory a plus. Control Theory, Systems Engineering, or Operations Analysis an asset.

COMMENTS: Communications interest and experience (military, amateur, or commercial) and general computer programming (Basic, Visual Basic, or FORTRAN) a must. Data communications and protocols (Internet, TCP/IP) a plus. U.S. Navy experience and satellite communications an asset.

1061. Looking for info on tube tester

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 01:43:53 UTC
From: arm@helix.nih.gov
Message-ID: <1994Jul20.014353.19559@alw.nih.gov>
Source record: 263309
Cross-posted to: sci.electronics,rec.radio.amateur.misc,rec.antiques

I am looking for any information on the following tube tester:

RD Instruments Model KS-15874-L2 Cardmatic Tube Tester
made by Hickok Electrical Instrument Company.

The tester uses punch cards. I have a copy of the manual. I would
like to get punch cards for the tester, or at least the punch patterns
for common as well as very old vacuum tubes. The KS-15874-L2 was made
especially for Bell Systems, but it may be compatible with the
Model 123 Cardmatic.

I would appreciate any information on this unit. I would also like
to find someone with cards for this unit or the 123.

Please Email me directly if possible. Many thanks in advance.

: possible cures to this problem?

Wayne,

I suspect #1 as well. In the winter I "ride" my bike on a trainer that has
the fork attached and the rear wheel spins on a metal cylinder. Often I
wear headphones to listen to the stereo over the noise of the trainer.
Lo and behold, my ears would get shocked from static arcing from the
headphones. I bet you are experiencing a similar same problem.

I just grounded my trainer/bike and the problem went away. Not sure how
you could do that while riding!

Yes, and it works quite nicely. The CD player in my XYL's car has a "Walkman jack" (you guessed it -- it's a Sony!) into which I patch an HT when we go on trips.

I've installed a trunk-lip antenna mount, some velcro straps on the underside of the trunk lid to keep the coax stowed neatly when it's not in use, and a length of PVC with rubber plugs (also secured to a trunk wall with velcro) in which to stow the antenna element. With an 1/8" phone plug patch cord and a cigarette lighter power cable stored in the glove box, all I have to add is an HT and operating from her car is almost as easy as it is from the mobile rig in my car. Set-up time is about two minues (of course the fold-down rear seats in Madzas that provide easy access to the truck compartment from inside the car significantly simplifies set-up.)

Subject: Elmers, please read
To: info-hams@ucsd.edu

A few hours on the Novice bands the other evening convinced me that we're neglecting a critical area of training, and that is the area of sending intelligible CW. Not pretty, or perfect, mind you, but intelligible. I heard (but didn't answer) a number of CQ's where the 'CQ' sounded like N N M A, and the callsign absolutely couldn't be parsed. And felt bad about the poor frustrated newcomer on the other end who probably had no clue as to why his calls weren't being answered.

It was with some relief, when I got my PK232, that I found that my
own straight-key sending could still be read by machine. I'd suggest
that Elmers who have a multi-mode at their disposal hook their
proteges up to it in local mode (pretty easy, the manual tells
how), and have them send until the controller can read their
sending. If the controller can read it (it can't read many perfectly
readable fists), it is approaching textbook. By the way, don't sweat
the spacing. These darn things can't be convinced to read/send the
letters at 20 WPM, and open out the spaces to knock it down to whatever.

This is a hard problem. How do you tell someone that you can't read
his fist, when you can't read his fist?

It seems much more likely that the FCC isn't going to see one dime of budget
increase unless you tell your senator or representative that you are willing
to have more of your taxes given to the FCC to get licenses processed faster,
in which case calling your senator or representative just wastes the time of
the person who has to answer the phone and then go digging through the pile
looking for YOUR application, all at the expense of everyone who forgot to
have their senator or representative make a bad situation worse.

And people wonder how the government got the way it is.

A friend of mine just got his ticket. He didn't have quite as good
luck:

Took Novice Test: April 8
Received License: July 18
Total Time: 14 Weeks, 4 Days.

He's now KE6IPV, in case you're trying to predict what your call will
be.

Of course, in the meantime he's passed his Tech written, so the whole
process has to start again, but at least he can operate now! His next
goal is to pass his General tests before he receives his Tech-Plus!

The geographic name server at the University of Michigan will help you
convert zip codes to great circle coordinates, which you can then convert to
Maidenhead grids. For example:

netcom% telnet martini.eecs.umich.edu 3000

Connected to martini.eecs.umich.edu.
Escape character is '^]'.
Geographic Name Server

I've kept most of the articles in that particular thread; so I'll
forward them directly. If anyone else wants info, just send me
an e-mail request.

Bottom line: I took a power supply that had not run in years; put
it on a variac and brought the voltage up in 10 volt steps - each
step was 3-4 hours or so. Then, at the end of a couple two or three

days, I plugged in the linear amp and thru the high voltage switch.
Voila - it works.

SB SAREX @ AMSAT $STS-65.017
SAREX Update/Keps 7/19

Greenbelt, MD July 19, 1994 at 22:30 UTC

The following Apollo-11 information was provided by Bob Inderbitzen, NQ1R, from the ARRL:

SAREX Apollo 11 Special Event

In commemoration of the twenty-fifth anniversary of the Apollo 11 mission, the STS-65 SAREX station on board the Space Shuttle Columbia will be operated as a special event station from 1713 UTC, July 19 until 1343 UTC, July 21. Unscheduled voice contacts will be made when the crew is available.

The SAREX station joins at least 12 other amateur stations associated with the National Aeronautics and Space Administration in commemorating the landing of the Apollo Moon Lander, the Eagle, on the moon's surface in 1969. Contacts made during the event will be eligible for a special commemorative certificate. Please send your report and QSL with a large 9-inch by 12-inch self-addressed stamped-envelope to the ARRL Educational Activities Department, STS-65 Apollo Special Event, 225 Main Street, Newington, CT 06111.

SAREX operates split-frequency. The downlink, or receive frequency for all SAREX activities is 145.55 MHz. Please do not transmit on this frequency. The uplink, or transmit frequencies for voice are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. In Europe, the voice uplink frequencies are 144.70, 144.75 and 144.80 MHz. The worldwide packet uplink frequency is 144.49 MHz. Please, transmit only when the Shuttle is in range and on the air. Crew call signs for voice are Commander Robert Cabana, KC5HBV and Mission Specialist Donald Thomas, KC5FVF. The packet call sign is W5RRR-1. W5RRR is the call sign of the Johnson Space Center Amateur Radio Club which supports SAREX flight activities and hardware aboard the space shuttles.

SAREX Packet

The SAREX packet radio has been percolating along. At this point, the packet robot has exceeded the 2000 connect mark.

Shuttle Visual Sightings

Gil Carman, WA5NOM, reports a visual sighting of Columbia over Houston this morning on the 10:10z pass. It didn't come out of shadow until 6 seconds past peak, and went into clouds about 15 seconds later. The next couple of mornings should be better. Also, there should have a very good view of the entry plasma trail Friday morning. The prime deorbit opportunity is still on rev 219, which will land at KSC about 10 minutes after sunrise there, and pass over Houston, over College Station and Huntsville at 10:31 UTC, an hour before local sunrise. That should give a plasma arc across the sky with a peak of about 15 deg as seen from Houston. Keep your eyes peeled!

Keplerian Elements

Gil Carman reports that Element Set GSFC-36A, provided by Ron Parise, WA4SIR, is still within 2 seconds of a current (orbit 174) state vector. This element set will remain the SAREX official set for today. This set is provided below.

STS-65
1 23173U 94039A 94199.34554466 0.00083772 00000-0 25331-3 0 366
2 23173 28.4669 295.5576 0003352 54.3064 305.7859 15.91070580 1551

Satellite: STS-65
Catalog number: 23173
Epoch time: 94199.34554466 (18 JUL 94 08:17:35.06 UTC)
Element set: GSFC-036a
Inclination: 28.4669 deg
RA of node: 295.5576 deg Space Shuttle Flight STS-65
Eccentricity: 0.0003352 Keplerian Elements
Arg of perigee: 54.3064 deg
Mean anomaly: 305.7859 deg
Mean motion: 15.91070580 rev/day Semi-major Axis: 6677.4181 Km
Decay rate: 8.3772E-04 rev/day*2 Apogee Alt: 301.27 Km
Epoch rev: 155 Perigee Alt: 296.79 Km

Note: This element set is based on NORAD element set # 036. The spacecraft has been propagated to the next ascending node, and the orbit number has been adjusted to bring it into agreement with the NASA numbering convention.

Subject: Why isn't IONCAP free?...
To: info-hams@ucsd.edu

Probably a stupid question, (i.e. along the lines of "Why do we have to
to pay income tax" etc...) But, I'll ask it anyway:

Why is not the source code etc... for IONCAP available to US citizens
for free, seeing as how their tax dollars went to pay for its
development (see quote below)?

> IONCAP: IONCAP, an acronym for IONospheric Communications
> Analysis and Prediction, was originally written in FORTRAN
> for a mainframe computer by an agency of the US government.
> This program is considered by experienced amateurs and
> professionals alike to be the most comprehensive and best... (stuff deleted)

Other software developed by the US government i.e. the CIA database of
rivers, lakes and streams is accessible at no charge. Why not IONCAP?

I know that "Nothing is free" and "Someone always pays" etc... But I geuss
I was interested if anyone had any further knowledge about how IONCAP was
developed and who benefits from its sale.

Thanks for any info...

Version 0.10 of the

Universal and Free List of Repeaters for Radio Amateurs

is available as mipg.upenn.edu:/pub/yee/rptr010.Z

Unfortunately, the larger version 0.03 can no longer be distributed.
I am hoping to get out 0.11 sometime next month.

: possible cures to this problem?

Wayne,

I suspect #1 as well. In the winter I "ride" my bike on a trainer that has
the fork attached and the rear wheel spins on a metal cylinder. Often I
wear headphones to listen to the stereo over the noise of the trainer.
Lo and behold, my ears would get shocked from static arcing from the
headphones. I bet you are experiencing a similar same problem.

I just grounded my trainer/bike and the problem went away. Not sure how
you could do that while riding!

Yes, and it works quite nicely. The CD player in my XYL's car has a "Walkman jack" (you guessed it -- it's a Sony!) into which I patch an HT when we go on trips.

I've installed a trunk-lip antenna mount, some velcro straps on the underside of the trunk lid to keep the coax stowed neatly when it's not in use, and a length of PVC with rubber plugs (also secured to a trunk wall with velcro) in which to stow the antenna element. With an 1/8" phone plug patch cord and a cigarette lighter power cable stored in the glove box, all I have to add is an HT and operating from her car is almost as easy as it is from the mobile rig in my car. Set-up time is about two minues (of course the fold-down rear seats in Madzas that provide easy access to the truck compartment from inside the car significantly simplifies set-up.)

Subject: Elmers, please read
To: info-hams@ucsd.edu

A few hours on the Novice bands the other evening convinced me that we're neglecting a critical area of training, and that is the area of sending intelligible CW. Not pretty, or perfect, mind you, but intelligible. I heard (but didn't answer) a number of CQ's where the 'CQ' sounded like N N M A, and the callsign absolutely couldn't be parsed. And felt bad about the poor frustrated newcomer on the other end who probably had no clue as to why his calls weren't being answered.

It was with some relief, when I got my PK232, that I found that my
own straight-key sending could still be read by machine. I'd suggest
that Elmers who have a multi-mode at their disposal hook their
proteges up to it in local mode (pretty easy, the manual tells
how), and have them send until the controller can read their
sending. If the controller can read it (it can't read many perfectly
readable fists), it is approaching textbook. By the way, don't sweat
the spacing. These darn things can't be convinced to read/send the
letters at 20 WPM, and open out the spaces to knock it down to whatever.

This is a hard problem. How do you tell someone that you can't read
his fist, when you can't read his fist?

It seems much more likely that the FCC isn't going to see one dime of budget
increase unless you tell your senator or representative that you are willing
to have more of your taxes given to the FCC to get licenses processed faster,
in which case calling your senator or representative just wastes the time of
the person who has to answer the phone and then go digging through the pile
looking for YOUR application, all at the expense of everyone who forgot to
have their senator or representative make a bad situation worse.

And people wonder how the government got the way it is.

A friend of mine just got his ticket. He didn't have quite as good
luck:

Took Novice Test: April 8
Received License: July 18
Total Time: 14 Weeks, 4 Days.

He's now KE6IPV, in case you're trying to predict what your call will
be.

Of course, in the meantime he's passed his Tech written, so the whole
process has to start again, but at least he can operate now! His next
goal is to pass his General tests before he receives his Tech-Plus!

The geographic name server at the University of Michigan will help you
convert zip codes to great circle coordinates, which you can then convert to
Maidenhead grids. For example:

netcom% telnet martini.eecs.umich.edu 3000

Connected to martini.eecs.umich.edu.
Escape character is '^]'.
Geographic Name Server

I've kept most of the articles in that particular thread; so I'll
forward them directly. If anyone else wants info, just send me
an e-mail request.

Bottom line: I took a power supply that had not run in years; put
it on a variac and brought the voltage up in 10 volt steps - each
step was 3-4 hours or so. Then, at the end of a couple two or three

days, I plugged in the linear amp and thru the high voltage switch.
Voila - it works.

SB SAREX @ AMSAT $STS-65.017
SAREX Update/Keps 7/19

Greenbelt, MD July 19, 1994 at 22:30 UTC

The following Apollo-11 information was provided by Bob Inderbitzen, NQ1R, from the ARRL:

SAREX Apollo 11 Special Event

In commemoration of the twenty-fifth anniversary of the Apollo 11 mission, the STS-65 SAREX station on board the Space Shuttle Columbia will be operated as a special event station from 1713 UTC, July 19 until 1343 UTC, July 21. Unscheduled voice contacts will be made when the crew is available.

The SAREX station joins at least 12 other amateur stations associated with the National Aeronautics and Space Administration in commemorating the landing of the Apollo Moon Lander, the Eagle, on the moon's surface in 1969. Contacts made during the event will be eligible for a special commemorative certificate. Please send your report and QSL with a large 9-inch by 12-inch self-addressed stamped-envelope to the ARRL Educational Activities Department, STS-65 Apollo Special Event, 225 Main Street, Newington, CT 06111.

SAREX operates split-frequency. The downlink, or receive frequency for all SAREX activities is 145.55 MHz. Please do not transmit on this frequency. The uplink, or transmit frequencies for voice are 144.91, 144.93, 144.95, 144.97 and 144.99 MHz. In Europe, the voice uplink frequencies are 144.70, 144.75 and 144.80 MHz. The worldwide packet uplink frequency is 144.49 MHz. Please, transmit only when the Shuttle is in range and on the air. Crew call signs for voice are Commander Robert Cabana, KC5HBV and Mission Specialist Donald Thomas, KC5FVF. The packet call sign is W5RRR-1. W5RRR is the call sign of the Johnson Space Center Amateur Radio Club which supports SAREX flight activities and hardware aboard the space shuttles.

SAREX Packet

The SAREX packet radio has been percolating along. At this point, the packet robot has exceeded the 2000 connect mark.

Shuttle Visual Sightings

Gil Carman, WA5NOM, reports a visual sighting of Columbia over Houston this morning on the 10:10z pass. It didn't come out of shadow until 6 seconds past peak, and went into clouds about 15 seconds later. The next couple of mornings should be better. Also, there should have a very good view of the entry plasma trail Friday morning. The prime deorbit opportunity is still on rev 219, which will land at KSC about 10 minutes after sunrise there, and pass over Houston, over College Station and Huntsville at 10:31 UTC, an hour before local sunrise. That should give a plasma arc across the sky with a peak of about 15 deg as seen from Houston. Keep your eyes peeled!

Keplerian Elements

Gil Carman reports that Element Set GSFC-36A, provided by Ron Parise, WA4SIR, is still within 2 seconds of a current (orbit 174) state vector. This element set will remain the SAREX official set for today. This set is provided below.

STS-65
1 23173U 94039A 94199.34554466 0.00083772 00000-0 25331-3 0 366
2 23173 28.4669 295.5576 0003352 54.3064 305.7859 15.91070580 1551

Satellite: STS-65
Catalog number: 23173
Epoch time: 94199.34554466 (18 JUL 94 08:17:35.06 UTC)
Element set: GSFC-036a
Inclination: 28.4669 deg
RA of node: 295.5576 deg Space Shuttle Flight STS-65
Eccentricity: 0.0003352 Keplerian Elements
Arg of perigee: 54.3064 deg
Mean anomaly: 305.7859 deg
Mean motion: 15.91070580 rev/day Semi-major Axis: 6677.4181 Km
Decay rate: 8.3772E-04 rev/day*2 Apogee Alt: 301.27 Km
Epoch rev: 155 Perigee Alt: 296.79 Km

Note: This element set is based on NORAD element set # 036. The spacecraft has been propagated to the next ascending node, and the orbit number has been adjusted to bring it into agreement with the NASA numbering convention.

TM>The only difference is on the license. The no code folks license will
TM>read Technician, while the folks who have cw will read TECH PLUS. Just
TM>wording, you still have the same privs.

The privileges are not the same! Techs (no code) are limited to 30 Mhz and
up - no low bands!

Subject: Why isn't IONCAP free?...
To: info-hams@ucsd.edu

Probably a stupid question, (i.e. along the lines of "Why do we have to
to pay income tax" etc...) But, I'll ask it anyway:

Why is not the source code etc... for IONCAP available to US citizens
for free, seeing as how their tax dollars went to pay for its
development (see quote below)?

> IONCAP: IONCAP, an acronym for IONospheric Communications
> Analysis and Prediction, was originally written in FORTRAN
> for a mainframe computer by an agency of the US government.
> This program is considered by experienced amateurs and
> professionals alike to be the most comprehensive and best... (stuff deleted)

Other software developed by the US government i.e. the CIA database of
rivers, lakes and streams is accessible at no charge. Why not IONCAP?

I know that "Nothing is free" and "Someone always pays" etc... But I geuss
I was interested if anyone had any further knowledge about how IONCAP was
developed and who benefits from its sale.

Thanks for any info...

Yup. Just got mine in the mail. Dated 7/13/94 rec'd in mail on 7/18/94

Passed Tech no code Test on April 27th.

Rob.

Soon those new FCC Form 610's will start going through the computer, and
the licenses WILL actually say "Technician Plus" or "Tech Plus". (You get
the idea..) I thought I saw someone saying that the new licenses are
already coming out with "Tech Plus", maybe I was wrong. But if it hasn't
already started, it's soon to come...

>
>Another curiosity: no specific exemption is made in the rules regarding

>days - but they don't.

Actually, I think it specifically says on the CSCE that they never expire
if they are the 5 wpm credit for a Technician. However, if they are
credit for anything else, THEN they expire in 365 days...

Here's a another curiosity: I was reading through the rule book (March
'94 printing by the W5YI group) today, and noticed that it lists the
license classes as Novice, Tech, General, Advanced, and Amateur Extra.
ie - technically, there are only five license classes. I've gotten into
debates with friends about whether there are five or six license
classes. Since they're now going to actually print "Tech Plus" on the
licenses are they modifying the rules to call it six license classes, or
will it still be five classes with special circumstances for one of
them? Just curious....

1065. HELP! Whats up with callsign server

Newsgroup: rec.radio.amateur.misc
Date: 1994-07-20 03:42:40 UTC
From: Jim Justen <juste001@maroon.tc.umn.edu>
Message-ID: <Ct7zLD.9on@news.cis.umn.edu>
Source record: 263313

I hope this is the right place to post this...
Ive only had reason to telnet into the various callsign servers once or twice...I never had a problem before
BUT now when I try any of the three I know of (Buffalo, pc.usl, and ns.risc)the gateway opens but nothing else...Ive waite as much as an hour, and tried around the clock for two days.
Is there a new address or other route??
Thanks for any advice you might offer!

Hey Greg, no big deal. Those novices are just trying to emulate the fist of old farts sending with bugs :)
